I would be particularly interested to exchange emails with people who used the equipment whilst it was in service, maintained them or were even involved in the design or manufacture. I would like to get some firm indications of the dates that the receivers were in service, where they were used and for what purpose. Any reminiscences on the performance and reliability of the receiver (good or bad) would be great. If you have any photographs of the radio in use that would be wonderful !

Also if you own one now then I would be interested in exchanging information.

If you have any information about the receiver then I would be interested in buying or copying it. Scanned images would be gratefully received. I might even be interested in buying some other R1475 units as a source of spares.

Please contact me directly g8ebm@compuserve.com or reply to the newsgroup.

Many thanks and lets see if we can document this receiver before everyone forgets it !!

Regards

Steve G8EBM

Was thinking of gettig an IC 718 HF rig, which can be had for $600 new now, with a free DSP coupon through 3/31/02. Does anyone remember what these were selling for at the Dayton, OH Hamvention last year? I am going to Dayton this year (first time, and even got my work to pay per diem and lodging), and thought perhaps I could get a better deal if I waited just a bit. Any thoughts?

Thanks,

Van

1989. IC 756 PRO vs FT 1000MP

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-10 21:32:31 UTC
From: siamk@aol.com
Message-ID: <20020210163231.16117.00000676@mb-fq.aol.com>
Source record: 47690

Any thoughts on the pros and cons of these two radios? They appear to be quite different animals. One is all digital and the other is half and half. One has a pretty screen and the other has collins filters and a great receiver. One has a nice memory keyer and the other has an external key pad tat has to be purchased to accomplish the same thing.

What's your vote and why?

Mike

Hi Steve.
I was on National Service Radio Ops course in 1955. After 26
weeks basic
course at RAF Compton Bassett we went on to further training. 18 to 25 words
per min cw.
They were used in training classes at RAF Wythall near Birmingham.
Was not to experienced then in receivers.
We got AR88s when I got to permanent camp in Germany.
Wonder if anyone else reading this was at 755 Signals
Unit,Hambuhen,Germany.55/56
de Johnny Melvin G3LIV.

I have a Sony SW7600G For Sale.

Specifications:
-Coverage: 150kHz to 30MHz and FM (stereo with headphones)
-Synchronous detection
-SSB reception
-20 presets (10 AM / 10 FM) + 2 timer memories
-Dimensions/weight: 191 x 118 x 32 mm, 615 g (incl. batteries)

For additional information go to the following web page:

http://www.rnw.nl/realradio/icfsw76g.html

The Sony SW7600G is in excellent condition and works fine. I have the original box and manuals. The selling price of $110.00 includes shipping costs within the continental United States.

Please email me direct if you are interested. Do not reply to this message. My email address is: rbird2@peoplepc.com

Thank you,

Rodger

1996. VX-5R aftermarket antenna

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-11 00:30:11 UTC

Message-ID: <ngE98.7022$0c.295541@news2.east.cox.net>
Source record: 47598

Folks,

I'm looking for an aftermarket antenna for my VX-5R. Requirements are same as or better than stock TX/RX performance on the 2meter and 440 bands and as short and flexible as possible (the stock antenna is a bit too stiff when carried inside a jacket.) Does anyone know if the Pryme RD-9SMA would fill my requirements? If not, what else is out there?

Thanks in advance,

(a new) KG6JTM

I would imagine that like most things, whatever a person owns, is the one that's best, and I would guess that you own an FT1000MP.

I own a ProII, have never used a FT anything, however:

My favorite hangout is 40m cw. I have never experienced any qrm, qrn, etc. conditions that prevented me from copying the sigs that I wanted. To my ears Collins filters, at the narrower cw bandwidths, have a LOT more ringing than the ProII when tightened up.

The DSP filtering and flexibility is fantastic.

While the band scope is not necessary, after using it... it becomes a necessity.

I rather enjoyed building a customized selector for the stored cw and audio messages. Of course, if you're incapable of that much homebrew, you can use the selection buttons on the rig itself.

My first rig, in my novice days, was a home brewed tx, 6V6 osc to an 807 final, built on a pilfered cake pan and the rx was a Hallicrafters SX-25. Been through a lot of rigs since then, both home brewed and commercial... for my operating requirements, cw 95% and SSB 5%, the ProII is hands down the best rig I've ever used... which may not be a surprising conclusion, since I've purchased it.

Sounds like you really enjoy your rig. I owned and sold both rigs --the Ft 1000MP and the IC 756 PRO. Now I'm considering the PRO II and the new Mark V. I was just courious about what folks thought about each rig and why.

Appreciate your comments. I may wait until Dayton in hopes the prices go down some. Now I'm using my back-up rig, the IC 718 --a really great little rig. I am also 95% CW.

Mike

Check with AES or such. I bought a Comet or Pryme it is approx. 17inches long, extremely flexible, thin gauge, can tie it in a knot. I slammed it in truck door, no damage. Uses SMA connector too. I'm delighted with it. As soon as I find the package, I'll advise manufacturer, but I'm leaning toward Comet.

> appreciated. Thanks!!!

I think you're making the mistake that too many make, ie learn code just enough to pass the test. Not only will this not put you in a good position if you want to go further with the code, but if you learn the code properly in the first place, the test will not be a struggle.

One of the mistakes people make is to "learn to send" first. Usually, this means getting a code key, putting one of those Morse Code charts next to it, and then looking up a character when you need to send it. I know I started that way, back in 1970. It's far easier to send than to receive, especially if you don't have a means of receiving code (as was the case before home computers came along) and you can find such charts all over the place (or at least you once could). But sending isn't the same as receiving, and once you can receive, the sending will be no problem. Being able to receive is ultimately more of a test than sending, so the sending test, if it still exists, is more about sending skill than knowing the Morse code.

The false assumption is that you start listening to code at very low speeds, and then as you get better at it, you increase the speed. Or, now that many countries only require a 5 wpm code test, you stop there. The problem is that at slow speeds, you'll be listening to the individual bits of each character, and then mentally looking them up on a chart in your mind. And this is one of the reasons that code is so hard for most people, because once they pass the test, and enter the real world, code is sent faster, and they can't keep up. If they do pursue the code further than passing the test, and the initial horrors, they may find they have a big problem increasing their code receiving speed. Because as the code speed increases, they can no longer pick out the individual bits of each character, and do their mental lookup.

The solution to all this is to start with receiving, and right from the beginning listen to code that is sent at a high speed. You'll get used to the characters as a sound, as a certain rhythm. You'll recognize each character as a sound, instead of listening for the dots and dashes that make it up and then looking it up.

The only difference is, you want to set the spacing between characters quite long. So each character is sent quite fast, but the spacing means that relatively few characters can be sent in each minute. As you feel more confident, you reduce the spacing.

This isn't a new technique, but with the code practice software around, it is a whole lot easier to have code sent to you this way. When I was a kid, you could listen to code sent over the air (which, except for code practice transmissions wasn't all that helpful for getting started0, buy a record that contained morse code, or attend a code class where someone would send code to the class. Now, you can get more receiving in during the week, without having to worry about being in a specific place at a specific time.

It takes no more effort to learn the code this way than it does to start with the each character sent at a really slow speed. It may actually be easier. The problem is that it doesn't seem like it would work, so people continue the old way. And you will be better set to pass the test, and even to use the code rather than throw it away after the test.

Another thing I'd suggest, now that there is such a thing as code practice software, is to just let such a program run for a while, without trying to write down what's sent, or even to know what each letter is which. Just get used to the sounds of morse code, for a while. I have no idea if this will help, but it changes the whole process from something to get out of the way.

Even once you do know what sounds go with which character, it's probably worth just letting the code program run in the background. Use your computer as you would otherwise, and sometimes you'll notice the code, and recognize what's being sent, and other times your attention will be elsewhere. My point is that the pressure of learning the code may be an inhibitor, so if you stretch it out and make it less goal oriented, in the long run you may be easier.

I have a Heathkit DX60 transmitter that I bought but never used. The person who sold it to me said that it worked but only put out 20w. I replaced two tubes. I removed the original mic connector and tried to squeeze in a 1/2" plug, but otherwise it's untampered with. It comes with a W7FG issued repro manual and a 7Mhz crystal (I believe it's around 7018khz but I haven't looked in a long time). The whole setup is yours for $100 or best offer. Yes, this is a Radio Shack. In the mid 90s mobile amateur antennas
were avilable through the catalog by special order. This one has never
had RF applied to it. It has no end connector on the cable from the
mount. I just want to get rid of it. $50 or best offer. Prefer pick up
in Sacramento, California but can work out shipping if you insist.

Hi Mike, nice discussion, and you are absolutely right, except you work from the false assumption that the gentleman wants to use code after he passes the test. If all he wants to do is pass the test to do voice HF, then he doesnt care if cw is sent faster on the bands and that he will have a hard time copying. Many hams have no interest in cw, (seems strange doesnt it!). If however what also happens to him is the same thing that happens to many others, they start to learn code and end up loving it, then your method is correct. Another nice thing about your reply is you care enough to be constructive and helpful.

I hered about a device called antenna tester it is just a
RF-generator plus a SWR measurements .
it is for antenna installation .
i dont know waht is its benifit for antenna installation .
i mean i have static frequency channels(i.e TV channels) and of course
static antenna lenght (i.e fixed)
then what may i gain with that tester.
another question:
i know that a receiving antenna must be in the order of half the
wavelength
. is that apply for a transimitting one ?

Yea, the drag/drop filters work well. Quite an improvement for a rig
with no cw filter. And if you have a cw filter, then you have "super"
cw. The chromapix filters are nice as you can make a filter and then
store it as a saved filter. If you don't feel like spending money,
there is a freeware DOS DSP program that works fine for filters. I run
it fine in a windows dos box using my "windows" sound. It does
bandpass, band reject, etc, and gives you a "waterfall" type of
display. It's CW performance is probably about as good as chromapix.
Pretty steep sloped. It should be on the more popular software sites,
and is called "SBFFT" DSP. It doesn't do autonotch or noise reduction
though. I usually use the built in DSP for autonotch and noise, and
the SBFFT for cw filtering. Heck, for 50$, the chromasound is a more
powerful deal than the pricy icom DSP, but the downside is a computer
has to tag along with the radio. No problem here at home, as I always
use my soundcard for audio, but out portable or mobile, I'd need a
laptop. MK

The only problem with this method is you are training the brain at
high speed only. Not everyone goes at a high speed.
>

>
> It takes no more effort to learn the code this way than it does

> throw it away after the test.

Oh, it works, no doubt about it, but it's a one speed training method.
And it also promotes lousy timing, as from day one the spacing betwwen
letters is not correct. Now, I think for just passing a test, there is
no problem doing this, as he's going to test at one speed. But for on
the air usage, he won't be a very good CW op at all. The first guy
that comes along at 9 wpm with standard spacing and he will likely be
lost. I maintain it's best to practice code at all speeds. Start slow,
but also practice faster code also. Don't stay at any particular
speed. It's better to practice good "proper" spacing if you want to
have a good fist. It's also good to practice mentally decoding
everything you see in print, such as newspapers, signs , etc. The
constant "lookup" practice will help at remembering letters. The so
called hump at 15????wpm is a farce really. That comes from not
practicing enough. I started at less than 5 wpm, going slow as a
snail, and I had no problem reaching a solid 18 wpm within the first
year. I noticed no "hump". I eventually peaked at about 55-60 wpm, so
I can attest starting slow will not kill your speed. Only lack of
practice does that. The only reason I stopped at 55 wpm is thats the
fastest I can send on a bencher paddle without getting too sloppy. If
I had switched to a keyboard like the faster hot dogs, I probably
could have ended up at 70-80 wpm. But I hate a keyboard. Takes all the
fun out of it. If I'm gonna use a keyboard, I might as well run RTTY
or PSK31. MK

Look up MFJ enterprises on the web. Their 'tester' will check frequency
resonance of an antenna without a transmitter needed.
It's a nice device. Not only will it show you how good your match is on
the frequency you're wanting to operate on, but you can spin the dial and
find out where else it's resonant.

Hi Murray,

I have one and it seems to be a neat little radio. It stacks up well
against my 756ProII both with the DSP and the receive sensitivity. One
neat thing it has that the 756ProII doesn't is bass and treble for the
receive audio which makes SWL and wide audio SSB sound great through a
good pair of speakers. I haven't owned a regular 746 so I can't give a
comparison between the 746 and the Pro.

2017. Question... using Drake T-4XC with Heathkit p/s?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-11 13:25:42 UTC
From: k5dh@raytheon.com
Message-ID: <qDP98.214$Bd4.2655@dfw-service2.ext.raytheon.com>
Source record: 47621
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Okay, guys, I'll show my ignorance...

I've heard of folks using Heath HP-23 series power supplies with Drake 4-Line gear. I have a T-4XC that needs juice, and I have a homebuilt power supply that's a very close copy of a Heath HP-23 (the transformer is from a junked SB-401). The high B+ output from the p/s is about +825 vdc. The specs on the T-4XC call for a high B+ of +650 vdc. The low B+, bias, and filament supplies match up just fine. What about running the T-4XC with that much voltage? Can I just do it, or am I running the risk of damaging the Drake? Is there a decent way to mod the power supply to provide a lower voltage? I could build a resistor voltage divider network, but that seems kinda crude and wasteful of power. I'm not afraid to hack on the p/s, since it's homebuilt and not the "real thing", so there's no "collector value" involved. Anyone wanna offer free advice?

Another question... there's a mod on the BAMA to replace the 6JB6's with 6146B's. Have you done this mod, and would you recommend it? Sweep tubes are getting scarce and "spendy", thanks to our 11-meter friends, but 6146's are still cheap and plentiful.

Yeah, I suppose it's inevitable, but I for one will not appreciate an electronic QSL as much as I do the old-style postcard kind. I like seeing the pictures chosen by the DX, I like it when I get a card with a hand-written message on it (yeah, that's pretty rare) and I like getting stamps from the DX country on their envelope.

Sure, lots of people now just print out a stick-on label for their card. Lots of people just use those generic callsign-and-qso-info cards. Lots of cards don't come with exotic stamps, since they arrived via the manager, or were metered instead of stamped. Still, I come home every day and the first thing I do is check the mailbox for QSL cards. The electronic ones just won't have the same thrill.

Source record: 47625
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Norm,

That explains a lot! The oscillator has the 10544 part number, with
a -60036 after it. It definitely puts out 1 MHz. I took the A26 card out
and began tracing it, and sure enough, there is a section that looks like a
buffer, but no multiplier. I took the A27 out, and it has 6 variable
inductors along the top, and three transistors. The multiplier?

So, two things that would really help:

A schematic / pinout of the A26 card

A schematic / pinout of the A27 card

Any info you could forward would greatly assist me. Maybe I should just
find a counter with an actual 10 MHz oscillator in it!

Cheers,

Tracy

I am going to be getting into Packet soon and I want to get a decent 2m mobile radio to use one both voice and packet in the shack. From what I understand, if a radio has a dataport on it, I don't need a special cord going to the microphone plug. If this is true, this is the type of radio I want. Can anyone recommend a radio for me?

2027. HELP MDT MONITOR Speaker Problem!

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-11 18:52:41 UTC
From: n9mxt1@aol.com
Message-ID: <20020211135241.02660.00001020@mb-fe.aol.com>
Source record: 47631

Hello,
I did the Discriminator MOD for the PRO-2006 to decode the MDT traffic with the MDT MONITOR for windows software. It works GREAT!

Ommm my question is however when its hooked from the scanner to the sound card I can hear everything BLASTING out of my computer speakers. You can even hear the squelch hissing out the speakers even though the squelch isn't even open. I even turned the volume all the way down on the scanner and its still LOUD!! I had to turn the volume off on the computer just to be able to not hear the hissing and tones!!! Just wondering if their is something I can do to eliiminate the BLASTING outside the speakers? Like I said however everything is working perfectly besides that!

Please let me know...

Jeffrey - n9mxt1@aol.com

It replaced the 1154/1155 and was superceded by the RA17. It was
manufactured by Marconi and served in RAF as a fixed and occasionally
mobile receiver. I have heard they were used in tanks, but I don't think
this is true, although they did have a shock-proof mounting.

I remember them well. The horizontal drum with the graph cursor and
the plug-in guard unit. The receiver was constructed with replacable
modules inside the case which plugged into octal valve sockets, if
memory serves.

I was trained on them at Cosford in 1957 and used them for fixed station
work up until they were replaced by the RA17 around 1961.

I remember buying one in the Thieves' Market in Singapore around 1962,
along with an HRO and an AR88. I had to build a power unit for it as
it didn't have the PSU 360, which was a dual mains and 12V vibrator
unit.

However, oddly, when I was doing comms for the Leuchars Mountain
Rescue Team in 1963, the vehicle was equipped with an 1154/1155.
(MQK22 working back to GFF/Edinburgh Rescue ... nostalgia ...
those were the days ... CW only of course).

Source record: 47634

I just picked one up last weekend and had a great weekend working it. It has excellent sensitivity and the DSP filtering is very flexible. I used the speech compression to punch through some DX pileups(3 news for me: Andorra, Belize and Sao Tome). Pretty good considering I was using a little Magnetic Loop antenna at 25 feet. I am not a seasoned HAM, but I think it is a good radio. Some pix of it at http://home.sprynet.com/~pbuchhop/ham.html . Hope that helps some.
Thanks,
Pete

I'm not sure if they are still around, but a outfit called Delcom made a 8 cell version-well made, but a bit less so than the Icom ones.
They also have a charge jack on the back(I forget if it has bottom drop-in contacts as well(I don't think so)), in case you want to use NiCads in it.

I've not seen a 10 cell one, but prehaps they made one too.

Tracy,

I sent you an email with a picture of a 10544 and the block diagram
of the 5245. That answers your questions about the functions of A26
and A27. In my email (copied below) I describe the same physical
layout of A27, and that it is the multiplier. Why are you still
confused??

You received a reply from Rick Karlquist that also seemed surprised
that the 10544 could have a 1 MHz output. He is one of the best
informed people you could find. He designed a lot of HP's best
sources and counters. Does the 10544 look like the picture I sent?

Since it was driving the A27 card which multiplies 1 MHz to 10 Mhz,
I guess you do have a strange version that somehow outputs 1 MHz.

What is your final goal? Look at the block diagram and decide how
much you care about. Is the multiplier all you need? I'm thinking
that anything from a26 (1 MHz buffer to the divider) through the
divider chain might be easier by homebrewing with modern chips than
using the very old 5245 discrete design.

quoted email:
>>I'm sending two files. First is a picture of the 10544 which
>>I've only heard of as being a 10 MHz osc. The crystal oven
>>portion of my 5245 is a cylinder about two inches in dia.
>>If yours has a 1 MHz output, then the rest might be standard
>>5245 stuff. The 2nd file is a scan of the block diagram from
>>the service manual. You can see if it looks similar.

>>The 10 MHz multiplier (A27) is a small board with 6 coils and
>>3 transistors. A35 is a long thin board. The divide-by-10 blocks
>>are each implemented on a board with about 7 discrete transistors.

>>Don't know if any of this matches yours but this is what's in
>>my old 60's version.

We have reduced the price to $199 !!! Get one while they last.

We have a supply of Optoelectronics 3000A Plus Counters. A very special purchase allows us to offer Optoelectronics 3000APlus top of the line portable frequency counters that are absolutely brand new, complete with accessories, still in the original factory boxes!. See more details at the ebay auction link below. Go to this link for details on purchasing one - http://www.datadeliverydevices.com/opto.htm or you can email me (remove all CAPS from the email address)

The Optoelectronics website has all specs, details
and the pdf manual at http://www.optoelectronics.com/3000a.htm

Don't get me to lying, but I don't see why it wouldn't run ok with the 825v. But I haven't looked up the specs to 6JB6's as far as the max plate voltage you can use. But if they couldn't handle 825v, I'd be surprised really. Yes, I've seen circuits on switching to 6146's, and have one somewhere, but have never tried it. I do know a guy here locally that converted an old TR-3 to 6146's and he said it did ok. I much prefer 6146's as the plate dissipation is 35w instead of 17 or so watts for the 6JB6. I used to run a HW-100 with about 1050v b+. Had no problems at all, and it would do a solid 125-130w all day long. I think the norm was about 825-850v as is your supply for heathkits. My TS-830 runs about 900v with no load if the meter is accurate. I have a set of drake twins, but I don't know if I ever bothered measuring the B+ on the power supply or not. I think it was about 700v in the real world with no load if I did... MK

>
> Thanks,
>
> Van

It might get better, but I don't know how much. It's pretty low now.
The 718 may be a bit cheaper than a year ago, but not sure how much.
It depends more on the radio, and if the radio comes out with
"updated" models. IE: IC-746. Now that the 746 pro's are out, I'd look
for the 746's to really drop. Now, the 706mk2g, which I bought a year
ago is still about the same price depending on where you get it. I got
mine for 899.95 at a certain place, and checking just now at that same
place, it's the same exact price at this moment. The TS-2000's seem to
be a sleeper deal. They started out fairly high, but they are
unloading those fairly cheap right now. Anyway, I don't think waiting
is going to help you all that much. Everything is about though the
floor as it is now. Used gear is lucky to be given away the past few
months. 9/11 really knocked the crap out of the whole market. It may
slightly rebound if anything in the next few months. I think kenwood
had to really drop prices on the TS-2000 to keep icom from eating
their lunch with the 746-756 pro's etc. Icom seems to be selling a
pile of those. The 706's have gone like hotcakes also. I've been
watching the serial numbers, and they have sold a pile of them just
since I bought mine a year ago. MK

Source record: 47643

A very good choice would be a Yaesu FT2500. This is a 50 watt 2m only rig, and was last sold about two years ago. I am sure you can find one used, you may look at ebay or ask here. Price perhaps ranging from $100-130.

It does not have a dataport, but you can get a cable made for your tnc from MFJ for about ten bucks. That plugs into the mic jack on the 2m rig, and the other end plugs into your specific tnc.

This is a very nice mobile rig, and very nice for packet, as it has enough power to punch through.

Hope this helps !!

I think some of the Alinco mobiles (DR-135T?) have data ports in the back
and optional modems that can be installed inside the rigs. I have a DR-435t
for 70cm that is a pretty nice radio. I don't have the packet modem
installed though.

For what you want, to get to 5 wpm and forget it, I'd just get the ARRL study course, "Your Introduction to Morse Code," on cassette or CD. You can order it at www.arrl.org

Some people make code out to be harder than it is -- but you only have to learn 26 letters, 10 numbers and two or three punctuation marks. That's about 38 or 39 characters, total.

Your school or college quizes probably challenged your memory more than that, so it's no big deal.

Get started with your ARRL study course. In addition, you can practice receiving by listening to ARRL on-the-air CW transmissions on your rig -- they publish transmission schedules in QST magazine. Look in the magazine's Table of Contents for "W1AW Schedule" to get frequencies and times.

Get a little over 5 wpm, and you'll ace your code test, no problem.

Beware, this clown will be the top bidder of legal amateur gear then report it as illegal to Ebay. What this does is cause auction cancellation after close, the seller to get warnings or suspension, and the inability for the seller to leave feedback on his account. In addition the seller is also out the auction close price. If this user or email address shows up on a radio auction I suggest canceling the bid or it could happen to you. I sent many notification to this clown for payment and license verification. All I got back was warnings from Ebay about illegal equipment rules despite legal equipment.

This is a very interesting discussion, on of the more so than I have
seen in any amatreur discussion groups in a while. I just passed my
technicians exam over the weekend in Maumee Oh, and am looking forward
to getting on the air. But I also want to go farther, I want to learn
code, and go for at least my general, and while I want to do SSB on
HF, I also have a strong desire to play with QRP. I am one of those
"CBers" that moved up to amateur, and while many of the 11m crowd uses
amps ect, I have always felt that anyone can talk around the worl with
thousands of watts, it would be more of a thrill to make contact with
as few watts as possible. So to work QRP I will need code, plus with
my working in emergency/disaster services and emergency
communications, I realize there are times that nothing will punch
through like code. I have tried many of the computer based code
tutors, I seem to like the W5YI program the best, and I have a friends
in the area that are hams, and I am sure that they would be willing to
give me some on the air help as well. If I am not mistaken I can use
code on 6m and 2m once I get my call issued by the fcc, so all I need
to do is get a rig that is capable of the modes I want to do on the

bands I am allowed as a tech i.e. FM, SSB, CW, PSK31, ect. then I can practice sending and recieving.

2050. Re: Learning CW.....?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-12 04:02:20 UTC
From: Van DeWald <dewald@bellsouth.net>
Message-ID: <3C6893CB.DE4A7CC4@bellsouth.net>
Source record: 47504

I'm starting to learn Morse Code, and and gearing up for the 5 wpm code test. Was wondering, from any of the VEC's out there, or from
folks who have been there and done that, I understand the method used is the Farnsworth Method, with higher speed characaters, but with
longer spaces in between each character to average out to 5 wpm. Is the speed of the actual characters at 20 wpm, or 13 wpm? I'd like to learn the
code for what the test requires, at that speed, but spaced out to 5 wpm. Right now, I know a, e, i, m, n, o, s, t, the period
and SK. I feel as if I'm doing well. I'm using NuMorse Pro, which seems to be a good software package, and an making CD sample sets, to play in the
truck while I drive to work, etc. So, anyone out there know if the FCC code test is 20 wpm Farnsworth, or 13 wpm Farnsworth? I think Michael Black
makes some very good comments below by the way.

For what it's worth, I'm learning CW via the Farnsworth method, with each character sent at 13 - 20 wpm, with relatively long spacing in between each
character averaging out to 5 wpm overall. I've learned about a 1/3 of the characters, and find that if I'm forced to listen to "true" 5 wpm code, I
can't decipher it. The code is "too" slow.

While trying to "improve" the circuit of my MFJ-901B tuner, I think I may have fouled it up. I attempted to add a movable tap, using a short length of wire and an alligator clip, by removing the lead to one of the tap points I never use (tap 'K'). I unsoldered the two caps, in order to get easy access, and now that everything is back together, I can't get a match, or anything like it (off the scale SWR readings) on any frequency, any band.

Nothing else is changed, and I have ruled out the rig and the coax jumper between the rig and tuner by testing on a dummy load. The caps check good, nothing is shorted to ground there. I am a little confused about how to check the coil and coil switch, though. There is a lead from between the two caps to the top of the coil, and then 12 taps spaced along the coil, each running to a lug on the switch. For the time being I have removed the jumper I had added and not reinstalled the connection between the coil and switch for position 'K'. I used mimimal heat when soldering/unsoldering, and there is no apparent heat damage to the switch, so I am puzzled what could be wrong.

I did remove the factory supplied 4:1 balun, and have not reinstalled it. I am presently using the "wire" and "ground" lugs to connected to a ladderline fed V (the system works OK like that, out of balance maybe, but I plan to add a coax-choke-balun once I get the tuner working again). Like I said, all was well till this misguided attemtp on my part to improve things, which were perfectly workable to begin with!. Please help me fix my tuner so I can get back on the air! Thanks!

Will, KD7BFX

2053. Re: Kenwood TMD700A

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-12 05:42:57 UTC

Message-ID: <BX1a8.34427$fK1.3657343@rwcrnsc54>
Source record: 47508

According to the manual, the radio is capable of receiving 136-200, 118-136, 200-300, 300-400, 400-524, and 800-1300 MHz with all of the cellular (roughly 860 to 890) and paging (roughly 920-940) locked out. It will receive conventional, but NOT trunked, systems (actually, it will receive the trunk channels, but it is not a trunk tracker where it follows talk groups). Receive sensitivity outside of the ham bands varies from fair to poor. I just did a quick check between the 700 and a low-end trunk tracker, and the trunk tracker did better than the 700 on the local trunked frequencies, but the 700 did hear them. Neither was running an 800 meg antenna.

I would run a dual band ham antenna tuned to 2 meter and 70 cm ham frequencies, so that when you transmit you have a proper antenna out there for the radio. That will work generally fair as a receive antenna at other frequencies. The radio has a single antenna connector, with an internal splitter - it expects a dual band ham antenna to be out there.

The 700 is a great radio, I love mine, but I don't use it as a general purpose receiver or scanner, I use it as a ham radio.

Carl.

I'm not familiar with that one, but have you checked carefully to make
sure you didn't bridge anything with solder while you were working in
there? It seems that when I assemble something that doesn't work,
about 90% of the time, the fault lies in some little bit of solder
shorting something out...of course, it can't ever be found until after
I've disassembled everything and checked every component :(

I hered about a device called antenna tester it is just a
RF-generator plus a SWR measurements .
it is for antenna installation .
i dont know waht is its benifit for antenna installation .
i mean i have static frequency channels(i.e TV channels) and of course
static antenna lenght (i.e fixed)
then what may i gain with that tester.
another question:
i know that a receiving antenna must be in the order of half the
wavelength
. is that apply for a transimitting one ?

That's something else. Duh.

If you're using the tuner to feed open wire (or twin lead) feeders,
the balun is essential. This isn't a choke "balun," it's an honest to
god balun that converts the unbalanced output of your rig or tuner to
a balanced feed. The tuner won't feed open wire without it.

If you never use CW after you upgrage, that's OK with me. But in order to get past the test you need to know what to study for. Take a look at "http://www.arrl.org/arrlletter/01/0622/". This will give you the latest information on CW testing.

As for a learning program, I used Morse Academy. It's free and available at "http://ah0a.org/AH0A.html".

For tips and even a on-line CW training course try "http://www.arrl.org/FandES/ead/learncw".

Good luck and maybe I'll hear you on the CW segments some day.

I used an IC-718 for about eight months and in my opinion, the DSP module was worth the money. I noticed a significant improvement in all modes(SSB, CW and PSK). I usually had it set on 4 for CW and 6 for SSB depending on band conditions. I also sprang for the CW filter. I never saw much benefit from the Noise Blanker.
Hope this helps.

I have to agree with you. I am a new ham, probably on the younger end of the curve, manage
an emerging technology and am heavily involved in new cutting edge technology. But, in
this area, I agree physical, hand-signed cards are superior to eQSLs; at least for me anyway.
Not being a fan of eQSL doesn't make one a Luddite.

I've found that the 1000mp mk5 has an exceptional receiver. I've compared it with the original mp using same antennas, ect. And the mk5 hears more than the mp.

2070. FT-5100 intermintent UHF PA problem

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-12 16:18:32 UTC
From: Nate Bargmann <n0nb@networksplus.net>
Message-ID: <3C694058.4060907@networksplus.net>
Source record: 47526

I have a Yaesu FT-5100 that has a problem in the UHF power amplifier.
At times it will develop full output (>30 Watts) and then will suddenly
drop to near zero (<.25 Watts) and may or may not return for some time.
I've observed that the problem may be heat related and I've received
advice the problem may be in the UHF PA module itself.

I am looking for someone with access to a service manual to this radio
who would be kind enough to scan the relevant pages that contain the
normal voltages in the PA area including the driver stages. I would
also like the UHF PA alignment procedure.

Thanks!

73, de Nate >>

Great antennas, by the way. I have the 80/40/20/17/12 version and it
works just as advertised, at 1500 watts, with no problem. The perfect
companion to a triband beam. .

Bandwidth is reduced compared to a full size dipole of course, but
efficiency is very good. Took about an hour's tweaking to get the
resonance where I wanted it on all bands

The usual disclaimers apply - just a satisfied customer.

Van:

When I took the code test in October, it was Farnsworth 15 wpm (or, so I was told by the VEC). FWIW, I studied code at 8 wpm at Farnsworth 20 wpm. I did this on the assumption that a "cushion" would help for the following reasons:
1) The tone would be different
2) The environment would be different
3) Nervousness would interfere.

I think this approach helped me -- the test was the slowest code I had ever copied Of course your mileage may vary -- just a thought <grin>. Good luck

I have for sale a nice condition Yaesu FT-101ZD. This particular
transceiver is the version with AM mode included.
The cooling fan option is also installed in this rig.
Cosmetically it is in nice shape with one small hairline scratch
next to the clarifier control. Electrically it is in fully
functioning condition with full output 80-10.
$375.00 plus shipping and insurance from zip code 76001

Thanks!

2078. Ext ALC to control IC-735, help pse

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-12 20:44:09 UTC
From: Richard J <no.flame@no.spam.se>
Message-ID: <a4bupfrqp1@news.lth.se>
Source record: 47533

Hi group - oh ye helpful ones -

I need to know the ALC voltages necessary to bring down the output of the TRANSVERTER jack, in order to drive a transverter with a lot less power than the stated "30mV" - whatever that measure came from (ICOM user manual). I plan to do this thru the ACC 2 jack, pins 2(GND) and 5(-V).

The transverter (RN Electronics, UK, 1990) uses 1 cable for TX and RX, so it all comes down to the transverter jack, no attenuator options possible.

2 questions arise:

a) does ALC limiting affect the transverter output at all, or does it just shut down the output stage of the rig more or less?

b) I *guess* from past experiences that we talk about applying a negative voltage in the order of 0V-- -4V or so. I need to get this verified, and also need some kind of table where ALC voltages and the corresponding power reductions are shown. I need to prepare this ALC supply as best I can without having the rig here, and it has to work at first try (long trip to rig, no tools/components etc on site)

maybe c) I also guess we are talking small voltage increments for drastic changes in output, 0.1V increments or less? Time to chase a 20-turn pot, but what value, and what power source (internal 13.8V may or may not be good candidate, you tell me?)

Anyone with precise knowledge (or any other useful info) abt this issue would be a welcome guest on my screen.

Cheers from Sweden /73 Rick, SM7SCJ, somewhat technically challenged

> inductors along the top, and three transistors. The multiplier?

Yes, in three sections: x2, x5 and amplifier.

> So, two things that would really help:
>
> A schematic / pinout of the A26 card

P1-1,3,6,7,13 (0V)
P1-5 (osc/agc output)
P1-10 ("trigger" amplifier input)
P1-6 (-15V)
P1-15 (20V)
P1-14 (1MHz out to A27 card) approx 0.5Vp-p
P1-9 (1MHz out to A35 card) approx 1.5Vp-p
P1-11 (1MHz out to A28 card) approx 2Vp-p, capacitor coupled output
P1-12 (1MHz out to A5 card) approx 2Vp-p

I'll assume you don't need the pinouts for the P2 connector.
Note: connect P1-5 to P1-10.

> A schematic / pinout of the A27 card

P1-14 (1MHz input)
P1-2 (10MHz output)
P1-15 (-15V)
P1-5,6 (0V)

> Any info you could forward would greatly assist me. Maybe I should just
> find a counter with an actual 10 MHz oscillator in it!

No need to tear apart a perfectly good counter just for a time base. There
should be other options available.
Sorry, I can't supply schematics except via snail mail, but it looks as if
another poster has sent them to you already.

Fifty feet of insulated hookup wire would work just fine for
general SWLing. Just solder a male RCA plug onto one end of
the wire, feed the wire out a window, and up into a tree or
something. This has worked fine since the dawn of radio!

2090. Re: HP Oscillator from an HP5245L counter

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-12 23:10:12 UTC
From: Tracy <thooker@psl.nmsu.edu>
Message-ID: <a4c7eg$l0a$1@bubba.NMSU.Edu>
Source record: 47545
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Well, you are right, or course. I got the picture of the oscillator and the file containing the x10 multiplier. It is much different than the multiplier A27 board from this counter, but I can use it to build one if necessary.

My real goal is to get a really good 10 MHz standard for my workshop. It sounds like it would be a lot easier to get an old HP5245M with the hi stability oscillator and just use it.

BTW, the oscillator I have looks just like the one in the picture, except the p/n is 10544-60036.

Thanks everybody for the help!!!

Tracy

The analog communications facilities used single side band modulation on carriers
in the frequency range of that meter. The circuits were frequency changed as the circuit
transited the system. The circuit terminals recovered the audio signal.

Whenever the circuit didn't meet spec.'s it would be helpful to make measurements
some place in the middle to help determine where the problem would be.

Your instrument was used to measure the circuit at those intermediate locations.

Many years ago, probably more than twenty, I had one of these. (tear in eye)
Its a really good radio. If I recall correctly the M position will cause the radio to receive the frequency "dialed" on the display and transmitt on the frequency in the memory. It allows for "odd splits".

Hope this helps,

Tony - WD8NUP

----------snip!----------

MFJ, at one time encouraged owners to 'hack' on the product. They
called it the 'No Matter What Warranty' I think. If you actually
broke it, which I really doubt--that's a tough tuner, you might get a
fix if you put it back the way it was and send it to 'em.
Might just want to check your owner's manual.

2095. ?is this a good deal?

With Mine, I took a 12 foot patch cord (with RCA plugs on each end) and
cut one connector off. I then split the wire, and ran them along the
ceiling molding in my radio room. Effectively an invisible antenna, yet
worked fantastically.

I have a FT757GX that will drift up and down a khz or so after
it has been on for some time. Some times it takes quite a while
(more than an hour) to drift, if at all. I suspect that since it is such a
compact radio the VCO is getting warm. I have a RF VTVM
and freq counter. Before going in a trying an alignment, is there
anything I should know or be wary of? I have the Tech supplement
that gives an aligment procedure. Just trying to be cautious. Looks
like just taking it apart might be a chore.

These are good radios, but they sell new for $255 from both AES and HRO. You'd be best off checking to see what the new prices of the included accessories cost in addition to the cost of a new radio and see if it's worth it. Personally, I'd guess the 3" stubby antenna is useless unless you're under a repeater, the extra batteries are a bit unneeded, unless you plan on operating for a long time without recharging, the software/cable goes for around $60 and a hand mike can be gotten for about $20.

Also, the auction mentions the "6m attachment" for the stock antenna. There's no such thing. That extra piece on the factory antenna, which comes with it, is for receiving below 50mhz, not for transmitting with, as per the manual.

Hello Ian,
if you really do think that "real cards beat electronic cards any day of the week" then you really should stick with what you call "real cards". No one is forcing anybody to go with eQSL's

However I find the eQSL method to be much faster, much simpler, much cheaper, and a lot more fun. I have dealt with many "real cards" in my awards pursuits and in many instances had to spend "real money" in a losing effort that never yielded a card at all. I couldn't even get a qsl card from Mexico after 3 attempts each time with $$$ enclosed and SAE's. Finally the op there I was trying to get a card from emailed me and admitted the postal system was "wise" to the "real card" qsl game and was stealing from Hams all the time. With eQSL's I can "just say no" to unethical foreign postal workers once and for all.

I never liked the fact that to get a qso "confirmed" for an award had more to do with things completely out of my control (like postal workers stealing, and bad postal deliveries around the world, and DX ops that are in it for $$$ only) then it had to do with my station's performance level and / or my skill as an operator.

Furthermore I can get a DXCC credited qsl card (via eQSL) in a couple days for any - and - all qso's I make..even to the rarest-of-the-rare DXCC entities. This is the "new way" and the "much improved and long over-due better way". I am 100% on-board with eQSL and have been for months...it is fun and easy and it guarantees I get a card for my efforts and I don't have to depend on outside sources in foreign countries to cooperate so that I get the confirmation I am entitled to.

Those are my feelings.....maybe catch you on the bands one-of-these-days....

Hi all:
I need a NORM crystal for the Atlas 215X. It is X602, and is 5.520kHz. It is the crystal located farthest from the bottom of the rig, not the one closest to the bottom.
Mine has a red stripe vertically on the crystal.
(FYI, the OPPOSITE SSB one has a green stripe on it, and is on the bottom of the SSB board.)

While I appreciate the suggestion, the only thing that happens when you remove a balun from between balanced and unbalanced parts of a circuit is that the currents in the ideally balanced part of the system (forward of where the balun "ought" to go) will probably be unbalanced, with the principle result of feeder radiation. I have had to feed twinlead or ladderline a few times via a coax connector before, with just these results.

I've also used parallel feeders with an L-match designed for single-ended antennas, using the random wire and ground connections, in both instances still able to get a good match and get out well. Some may quibble that the line radiation could reduce received signal strength and its reciprocal, and its probably without doubt that the added vertical component degrades signal:noise a few dB, but baluns are never very useful impedence matching devices in wide-range adjustable networks like the 'T' feeding a multiband antenna. They do admirably well matching to single-band folded-dipoles, double-zepps, and loops, but above 10:1 SWRs they saturate and worse, and cease doing their job as *baluns*, and even as impedence transformers if you push them much past 20:1.

That's why I removed the tiny (a single 1" core, no tape, 18 ga. plastic insul. wire, sheesh!) 4:1 "voltage" balun within a few days of bringing the tuner home from the hamfest. I will replace it will a proper 1:1 choke balun at the input, once I am done with the switch mystery.

Still looking for what was wrong, though I replaced the switch and we are QRV again here at KD7BFX. Old switch tests fine once removed from the circuit, all I did was r&r it, and all *other* components and wiring reads spot on for L, C, & R with either switch *in or out* the circuit. Mysteriouser all the time! One never knows though it could have been those damn gremlins again. . .

2109. Antenna MADE for AO-40!

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-13 08:36:21 UTC
From: Glenn Rollins <n3iyr@mywebsite.com>
Message-ID: <tb9k6u84f9vkchvli7gki2npa4nnginm31@4ax.com>
Source record: 47564

I have a website for the antenna I have developed for AO-40. This is NOT a BBQ grill dish, this is the real thing! Watertight HELICAL feed, NO aperture blockage,2' dish is 20.5 dBi gain, 3' dish is 25 dBi gain. 2" crossboom mount.A true performer. Signals from AO-40 at unbelievable squint angles. You should hear what you have missed! I have also posted tips you may find interesting. AMSAT has expressed intrest in my antenna to be sold at Dayton, but I have a limited supply. Drop by my site and just tell me what you think if you like.

From: A Different Nick <nicholas@commcen.co.uk>
Message-ID: <nsck6usitbd69vh3arvd7vg70eo5jmkr0b@4ax.com>
Source record: 47585

I'm doing the foundation course this weekend and hopefully I'll come
away with a pass.

As far as equipment goes, I've got the offer of an Icon IC-Z1E for
about ï¿½130 (ukp) or a kenwood th-75e for about ï¿½90 (ukp)

They are both secondhand.
Bearing in mind the max o/p allowed being 10 watts, could the group
advise on which might be the better radio of the 2, or suggest an
alternative around that price range.

Thanks

Nick

2111. Problems with Yaesu FT902 and FTV901

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-13 11:41:57 UTC
From: Jochen Cichon <joschi@vizzavi.net>
Message-ID: <a4djgo$563$1@newsread1.arcor-online.net>
Source record: 47565

Hi,

I connected the FT902DM and the FTV901 transverter.
I'm working on 20m with low power (abt 20wtts) as i noticed that the
rx signal is fading. (from s7 down to s2 and less)
Hm.
I switched of the heater and the rx signal somes back to s7.
After turning on the heater. The signal stays on s7 for a while before
fading to s2- again.

;(

So i disconnected the transverter.. and... Thats it.

Hm but why.

inside the transverter (as i know from the manual) there is a HF Vox.
And if the heater is turned on inside the Transverter a relais is doing
something?!
(don't know what exactly.. cos too less time to check the hole ting)

If someone has an idea or even a solution... please mail me

Tnx de dh1jc (Jochen)

Source record: 47567

I'm selling a Johnson Navigator transmitter, complete with copy of the original manual. It's in pretty good condition. Here are the faults: an extra 1/2" hole on the panel to the left of meter, non original meter, cabinet needs repainting, final output coil ceramic form is cracked at base and needs to be epoxied, non original AC cord, a little wear around the operate switch. Otherwise appears to be unmodified. Price $225.

Source record: 47572

Radio/Magnetic/Electric Field Strength Meter - Last Day Ebay

This is the TriField Broadband Meter made by AlphaLab. I bought it new for $145 a few years ago. It measures Radio, Magnetic, and Electric fields. It's scales are: 0-100 milligauss Magnetic, 0-3 milligauss Magnetic, 0-100 kilovolts/meter Electric, .01-1.0 KV/m Radio/Microwave (100 Khz to 2.5 GHz).

You can use this to measure exposure levels to various fields in your home, or you can use it to verify that your radio station is operating within FCC guidelines. I've even used it to watch the intensity of lightning strikes (using the electric field position).

This is a very nice instrument. It is in perfect condition. The instruction manual and a technical brochure discussing radiation hazards and measurements are included.

Does anyone have a Yaesu FT225RD for sale in the UK?
I would prefer a mutek version but this is not essential. I am in the midlands with cash waiting for the right radio.

Please email me (marieandpaul@hotmail.com)

Thankyou

From: Peter Buchhop <pbuchhop@sprynet.com>
Message-ID: <a4e0uoauj1@slb4.atl.mindspring.net>
Source record: 47578

No. But I bought one and like it. I couldn't find a review so the best I could do is read the IC-746 pro user guide before buying it. I went for the 746 pro over the 756 pro, enamored by the new 32 bit DSP and filtering technology which is also available in the 756 line, but didn't want to spend the extra money for the pro II (although the 756 pro also has some of these features and is closer in price). It's a tough call...I decided to go for the new 746pro over the 756 pro. Time will tell, but so far I am happy. Probably would have been happy with either, they're both good rigs.

Anyway, here is where I pulled down the 746 pro user guide along with the cautionary note these are copyrighted materials.

Good luck in your decision,

73,
Pete (K9PKB)

Source record: 47579

Radio/Magnetic/Electric Field Strength Meter - Last Day Ebay - Correction

Please excuse duplicate post - forgot to give Ebay link on previous.

This is the TriField Broadband Meter made by AlphaLab. I bought it new for $145 a few years ago. It measures Radio, Magnetic, and Electric fields. It's scales are: 0-100 milligauss Magnetic, 0-3 milligauss Magnetic, 0-100 kilovolts/meter Electric, .01-1.0 KV/m Radio/Microwave (100 Khz to 2.5 GHz).

You can use this to measure exposure levels to various fields in your home, or you can use it to verify that your radio station is operating within FCC guidelines. I've even used it to watch the intensity of lightning strikes (using the electric field position).

This is a very nice instrument. It is in perfect condition. The instruction manual and a technical brochure discussing radiation hazards and measurements are included.

Ebay link:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1330505507

I will be glad to provide additional information. Contact me at w4tq@mindspring.com

Agree with one post. Put it back together to original condition.
If you want to design your own tuner, get some parts and tinker.
Now my rant, I have restored receivers and other equiptment that hams have "modified". 95% of these mods either undermine the equiptment or outright ruin it, resulting in having to replace burned out parts, broken parts or rewiring to get the equiptment to function. These companies have spent hundrends of thousands of dollars in research and delvelopement to design a working piece and someone comes along with a soldering item and want to "redesign" it. (I am working on one rig now that is backward wired from the powersupply, another with a recifier mod that resulted in a blown power supply.).
My suggestion is, unless you have years of experience and training in electronic engineering, get some parts, read some books and tinker before trashing a piece of equiptment that was working fine in the first place. If it ain't broke, don't fix it. *wheew!!..I feel better already..:)

I have for sale a nice condition Yaesu FT-101ZD. This particular
transceiver is the version with AM mode included.
The cooling fan option is also installed on this rig.
Cosmetically it is in nice shape with one small hairline scratch
next to the clarifier control. Electrically it is in fully
functioning condition with full output 80-10.
$350.00 plus shipping and insurance from zip code 76001

Thanks!

I have for sale a brand new Drake L4B amplifier that has never been used. No power plug has ever been placed on the power cable. It was purchased, stored, and forgotten until the owner's estate was liquidated by his son. His son gave the amp to a friend of mine and I bought it form him. In this process, the box containing the tubes, plate caps, chimneys, and parasitic suppressors was lost. The amp was shipped from Drake in 3 boxes: one for the deck, one for the power supply, and one for the tubes and accessories. The box for the deck fall apart when opened, but the box for the power supply is in good shape and is included. Paper ID tags are still on the deck. I purchased all original, excellent condition, Drake chimneys, plate caps, parasitic suppressors, and an as new set of Eimac 3-500Z with full output. They were backups and only used to test their condition. So the amp is now complete. It also comes with the original manual. I have decided to sell the package. Price is $1,075 plus shipping from 79602. Digital pictures are available upon request from interested persons. Thanks, Charlie Hugg, K5MBX

Date: 2002-02-13 20:24:40 UTC
From: Jim Weir <jim@rst-engr.com>
Message-ID: <u6lirbk65e86bd@corp.supernews.com>
Source record: 47591

An elderly ham passed away and donated a lot of his station equipment to the college where I teach and run the ham club. Among the ancient goodies there is what appears to be a Heathkit HW-100 in moderately good shape complete with homebrew power supply and all the rest of it.

We have no use for it other than a museum piece, but as I understand it, some hams dote on these old boatanchors and might be able to get some real use out of it. We'd like to sell it for what it is worth and get some other equipment that the kids can't kill themselves on (a kv at a couple of hundred mils for the finals is a pretty hefty slug).

Can anybody tell me how I can find out what a reasonable price for this equipment is?

Jim

And threw it out the window so they could make something more cheaply.

Is a 1965 Corsa's suspension the best possible design because of all
the engineering that went into it? Maybe all the 24ga wiring in my
YL's Kia should have been left alone because, after all, the engineers
figured it was OK.

Hi all:

After reading this thread for awhile, I went to the ARRL web site, and did a search on "eqsl", "e-qsl" etc. and I found a few mentions of e-qsl, but nothing that mentions that the ARRL is doing anything but thinking about accepting e-qsl's. So is this really true or is someone reading more into ARRL thinking about it than has happened yet.

Hello John,
The real-low-down-skinny is that eQSL confirmations are now accepted
at the ARRL - DXCC desk provided the eQSL web site "mail-a-card" service
is used. Basically this way eQSL becomes a sort of qsl manager by
verifying logs from both parties of a qso and then mailing out the card.
This has never before been done and thus it is a '" news-item " for
all DXers that prefer the economy, speed, ease, and fun of electronic
qsl'ing. Statements to this affect are plastered all over the eQSL
website including a copy of the email from Bill Moore at the DXCCC desk
verifying that eQSL cards handled in this manner would be valid for
DXCC.
It can be seen by some that this is a new approval, and a change in
policy, by the ARRL since no electronic qsl cards of any type have ever
been "accepted" before for anyone under any conditions. But..also
since the ARRL is only accepting eQSL cards that have been mailed others
can say there is no ARRL policy change as they are "still accepting"
mailed cards. It can go either way.... Personally since nothing like
this (electronically derived qsl cards) has ever been "approved" for
DXCC before I see it as a "change in policy" by the ARRL.
Others disagree....be that as it may there is no argument that this is
a real shot-in-the-arm for eQSL users and will very likely spin-off as
more participation in the DXCC awards program to the benefit of the ARRL
since only it's members are eligible for their own brand of awards. I
see it as a win-win situation.....and..it most definitely is "something
new" IMHO....

Chalk-up another acceptance for eQSL's......

Confirmation was received today from the president-elect of the
3905 Century Club that their awards program will accept hard copies
of eQSL's as confirmation. The hard copy can be printed by the
recipient on his home computer if desired, or you can use eQSL's service
to have them printed and mailed to you.

Either is OK for Century Club awards.

The folks at eQSL solved two problems. Firstly they found a way to make their record keeping system of some value to some people. Without the document being submitable for credit, few people wanted them. They're too easy to counterfeit on the computer. Secondly, they found a way to make some money. By charging a dollar and then sending the card out at the postal card rate of 22? cents, finally they are in the black. Amateurs have been creating and mailing out electronically created cards for years. There is nothing new at all there except the process perhaps of 'ordering' the card on-line.

Hi folks. I've got a D104 that's not perfect looking by any stretch,
but it seems to work fine. It's missing the sliding PTT lock ring ,
has a couple of holes in the base, and the base has been repainted
badly. No connector on the wire. The head actually looks decent, no
visible damage.

You get the picture.

The good news is that it's yours for $15, you ship.

Source record: 47460

HTX-242 radio shack 2m mobile to trade for ?? Please note: This radio has no mic, mounting brackets, or manual. The power cable has been changed as well. I picked this up as a spare at a flea market, and I can verify that it works 100% when tried with the mic off mine. The case has some scratches, but the front panel is in mint condition. If you are familiar with these radios, it would make a great packet or IRLP rig. I don't want much for it, I just don't need it. I can supply pictures to interested parties.

Make an offer (but be kind), any and all trades considered.

Thank you,

ve3tmt@rac.ca

Hello John,
Did you visit the eQSL web site and read the email from Bill Moore of the DXCC Desk? I cannot speak for why the ARRL webmaster does or does not place what many believe to be important "news" on that site. You might consider emailing them. I would like to see their reply posted here.

My personal opinion is that they are reluctant to possibly steer anyone over to eQSL services since they (the ARRL) are going to launch the Electronic Logbook of the World ....one of these days.
It will supposedly provide for a 100% all-electronic qsl confirmation system that would feed directly into their own awards programs that would not require any paper-based qsl cards at all. However it looks like eQSL has done the end-around now by obtaining the "go-ahead" from Bill Moore himself that basically "allows" electronic eQSL's to be "accepted" for DXCC awards.

The eQSL system has many advantages over the yet-to-be-released Logbook of the World. With the LBOTW, once released and in operation, past qso's are not accepted. Not so with eQSL Furthermore....there will need to be digital signatures acquired and approved , as well as new additional ARRL fees (according to ARRL), and special ARRL- LBOTW software will need to be purchased or existing logging software will need to be upgraded (at a cost) to interface with the LBOTW system. There will need to spend $$$ spent and numerous hoops jumped through just to get only your recent qso's accredited. And of course don't forget you'll need to pay ARRL dues too....

None of this nonsense is required with eQSL.....they really have a better way and it shows already with the upsurge of acceptance (or call it usability) by various Ham Radio awards organizations. I don't chase awards anymore except for my own satisfaction and for ego-motivated "bragging rights" but I have to say I really get a kick out of the easy and automated way eQSL allows me to provide confirmations for any station I qso with...and now they are DXCC accepted too.....where is the down-side? I don't see it......

Hi there Jimbo....
I wondered where you had gone....well as usual you are not looking at the silver-lining Jim. The eQSL "mail-a-card" service (which has recently been OK'd for DXCC) still puts $$$ in the mailman's pocket when eQSL sends out the cards through (that's right) the USPS.

And so now your point would be what exactly?

I'm going to break it you easy as I can sunshine......eQSL is getting stronger, more widely accepted, certainly more widely used every day. Moreover eQSL is saving Ham's $$$, time, frustration, and $$$ pilfering by unethical foreign postal workers - and - no-good DX op's that collect $$$ for 1000's of cards but send out only a couple dozen confirmations a year....just enough to keep the "believers" sending in that money....you know that Jim.....

Now..is that the way you prefer?
Thanks for posting....

Hello Jim,
Man...you really don't know what the hell you're talking about (on most topics) but especially on eQSL. What would prevent p50dx@yahoo.com from "uploading his logs" and then having eQSL start "passing them out for a buck a piece" is the eQSL Authenticity Guarantee mechanism at eQSL. It requires a scanned image of the Ham's license be submitted beforehand.

Now before you start with how any system can be "tricked" or cards and licenses could be "faked" also recognize that most honest-hearted Ham's have no interest in ill-gotten "awards". Honesty and integrity cannot be legislated or enforced on anyone. Doing the right thing will always be optional.

Furthermore the odds of a convincing license forgery are miniscule at best. Most government authorities have selected a paper stock that would be very difficult to duplicate by amateurs. Take a look at - your - ticket Jim....are you going to be able to duplicate that exactly?

Still nothing is perfect.....I am sure that literally thousands of bogus and forged "real qsl cards" have been used for awards for a long time. In addition it is just a hobby award Jim....we are not dealing with the CIA or the Ft. Knox Federal Reserve.

Lastly if a few butt-holes do manage some way to "cheat" they are only cheating themselves. It would take nothing at all away from any awards you are I or anyone else legitimately obtained.

Maybe see you on-the-bands one of these days....

It depends on what you mean by "really good". The 10544 was
superceded by the 10811 nearly 25 years ago. The 10811 is
a much better design than the 10544. In the meantime, the rest
of the oscillator industry has caught up or surpassed even the
10811. Agilent recognized this last year and closed their crystal
fab. Considering that there are boatloads of 10811's floating around,
I sure wouldn't put a lot of effort into getting a 10544 going. OTOH,
since the two are form, fit, and function interchangeable, if you
have a 10544 socket, you can always plug in a 10811 if you
come into possession of one.

Vacation?

Get real Walt, take the up and coming Mellish Reef DXpedition (which I am involved in) for instance.

Do you honestly think a rough 3 day sail each way (real puke material) then 10 days of flat out operating to try and work as many "deserving" as possible under extremely harsh conditions, battling tick infestation and sleep depravation because of the incredible bird noise is a vacation???

...while you operate in the comfort of your shack.

Pedro...

as I understand you are looking for any or all the tubes below, and you are prepared to trade against 2 pieces of 2C39A?
I hope you have a lot of cash also, because 2x 2c39a (NIB) are not even 20USD where I live, and the 3CX1500 or a GS35B is a LOT more expensive....not to mention the 800A7 with socket....or the 500Z tubes.. The 2CA39 tubes will get you nowhere, I am afraid....

Good luck!

As usual the skeptics are out in force.. but they'll come around oneday--
10.3 million qsl on line can't me Eqsl is doing poorly.. they don't require
any donation if you don't want to give one.. so it's not a money earning
scheme like some on here have suggested.. I for one think it is a breath of
freash are in Qsl my Qsl ratio to qsos with dx stations has gone up 100
percent using eqsl. And I don't have to wait two or maybe three years for
the buro! Also if you don't for whatever reason want to join the Arrl , try
sending your cards via their outgoing Buro..

The Time for Eqsl has arrive. and it's working very well. Trust in the
future more and more award committees see it as a viable way to exchange
confirmations for awards.

Just my two cents worth now will get off my soap box..

(I'm in no way conected with eqsl other than a happy user of their system.)
73 Dave KC1DI // always qrp// qrp Dxcc 125 all 30 Meters.

What on earth is the 3905 Century Club?

As it only has a 'president-elect', maybe it doesn't even exist yet!
Or maybe it has been set up by 'e-qsl' themselves? Allegedly.

I have for sale a nice old Knight TR-106 with the matching V-107 VFO unit and cables. This is a 6m AM rig with built-in speaker. Silver and blue with a great styled case.

Front panel looks really good. Has all original knobs. It is NOT in mint condition, but shows less than normal wear. No bad dents or dings.

The power cable to the TR-106 is missing but you can easily make one. I have not tested it but it is all there. No modifications or damage has occurred.
Will sell for $135.00 plus shipping

3905 Century Club is an United States based net with session on 160, 80 and 40 meters SSB, 80 and 40 meter CW and several digital modes on 80, 40 and 20 meters. They offer awards to participants and, more importantly to this discussion, is a 25 year old organization. The FCC thinks they are for real as several 1x1 special event calls have been issued to them in honor (honour) of this anniversary. The president elect happens to be a ethical ham.

I'm not sure why you think it necessary to cast aspersions on this organization. (No, I am not a member; yes, I have participated in their nets on occasion).

They're working on something called "Logbook of the World". I've not seen
any details yet. It looks like a similar plan to eQSL's, but different.
You might find it mentioned as "LOTW" on search engines.

It is different. The eQSL plan is for the guy who runs the web site to
get your money instead of the mailman. The Logbook of the World plan
is for the ARRL to get your money instead of the mailman......

Both good plans. Especially with so many bored hams just waiting to
sign up......

The first thing you should do is get a copy of the manual for the
GR-81. You can get one from W7FG Vintage Manuals at "http://www.w7fg.com".
They have one listed for $18.

I assume you want the tubes because they are either not there or
all bad. I do find it nice to start out with a fresh set of tubes
when restoring something old. The manual will tell you which tubes
you need. You can probably get ahold of the tubes from ANTIQUE
ELECTRONIC SUPPLY at "http://www.tubesandmore.com". The GR-81 is
a fairly simple receiver so it shouldn't need many tubes.

But, your receiver may need more than just tubes. A piece of equipment
that old may have bad filter capacitors, resistors may have changed
value, transformers shorted, etc.. There a lot of things that may
need fixing. Usually the Heathkit manuals have a trouble shooting
section that will give you a good idea of what to replace. In the
manual you will probably find a resistance and voltage chart. Before
you apply power to the receiver, do the resistance checks. If there
are any resistances that seem out of line, don't plug it in. Fix the
problem first, then proceed.

Then, once you can power it up without a cloud of smoke, do the
voltage checks. Simple voltage checking can tell you a lot about
the piece of equipment.

Good Luck. It should be a fun receiver to get working again.

Al

An eQSL is a method of confirming a QSO electronically rather than the usual
QSL card. The eQSL web-site is at:

http://www.eqsl.cc/qslcard/

Hope this helps

Is he measuring the 1 MHz out directly at the oscillator pin? Or
after the signal has passed through to the output connector?
Regarding photos of a 10544: the 10544 and 10811 look identical.
I believe there may have been predessors to the 10544 that also
had the same packaging. I have only been with HP/Agilent since
1979, when the 10544 was just going out of production. I think
the 5245 was discontinued in the early 1980's. I remember they
had a big celebration (?) about it.

In any event, if his oscillator is truly 1MHz, I wouldn't expect
much in the way of performance from it, whatever its model
number is. Again, considering that something like 1/4 million
10811's have been made, it should be easy enough to get one of
those.

I can't say that I'm familiar with either unit, but at that power range, I'd opt for the biggest unit possible. I can talk forever on my IC-32AT (brick) with no discomfort, but my wife and father-in-law both find that their IC-2SATs are too hot to hold after talking for several minutes.

Regards,
Ed

S:3.1. Power Supplies

Q:3.1.1 What power supply should I use with the IC-746?

S:3.2. Antennas

Q:3.2.1 What antenna should I use with the IC-746?
Q:3.2.2 What range can the automatic antenna tuning unit (ATU) handle?
Q:3.2.3 Will the internal ATU handle "random" wire antennas?
Q:3.2.4 Are there any "tips" to using the ATU?
Q:3.2.5 Can I use the internal ATU along with an external ATU?
Q:3.2.6 Does the internal ATU work on receive?
Q:3.2.7 How do I use a "beverage" antenna?
Q:3.2.8 How do I use different antennas for receive vs. transmit?
Q:3.2.9 How do I measure SWR while in SSB?
Q:3.2.10 How do I tune up in CW without a key?
Q:3.2.11 Can I make the TUNER button activate an external ATU?
Q:3.2.12 Why doesn't the rig SWR meter match my external SWR meter?

S:3.3. Microphones

Q:3.3.1 What is the best microphone to use with the IC-746?
Q:3.3.2 Can I use a dynamic/studio microphone with the IC-746?
Q:3.3.3 Can I use a Heil microphone with the IC-746?
Q:3.3.4 How do I adjust the IC-746 for a Heil headset?
Q:3.3.5 Do I need a pre-amp to use a Heil microphone?
Q:3.3.6 What are the pin-outs on the microphone connector?

S:3.4. Keyers

Q:3.4.1 Can I hook up my straight key to the front "Elec Key" Jack?
Q:3.4.2 Can I connect my own Electronic Keyer to the IC-746?
Q:3.4.3 How do I wire up my paddles for use with the internal keyer?
Q:3.4.4 Can I use the internal and external keyers at the same time?

S:3.5. Amplifiers

Q:3.5.1 How do I hook up an Icom IC-PW1 RF power amplifier?
Q:3.5.2 What if I hook up more than just an IC-PW1?
Q:3.5.3 How do I hook up a non-Icom RF power amplifier?
Q:3.5.4 Do I need an external amplifier switching relay?
Q:3.5.5 My SEND relay seems to be stuck, what do I do?
Q:3.5.6 Can't I just use the ACC port to key my amp?

S:4. IF Filters

Q:4.1 How many optional IF filters can I install into the IC-746?
Q:4.2 What optional IF filters are available for the IC-746?
Q:4.3 Which optional IF filters should I buy?
Q:4.4 What is an IF filter's "bandwidth"?
Q:4.5 What is an IF filter's "shape factor"?
Q:4.6 Why do filter "bandwidth" or "shape factor" matter?
Q:4.7 What is considered to be a narrow filter?
Q:4.8 What are narrow IF filters used for?
Q:4.9 Can an IF filter be too narrow?
Q:4.10 What's the difference between IF filters from Inrad vs. Icom?
Q:4.11 Which IF should I put an optional filter into?
Q:4.12 What's different between IF filters for 9Mhz vs. 455Khz?
Q:4.13 What are the 9Mhz IF filters best for?
Q:4.14 What are the 455Khz IF filters best for?
Q:4.15 How do I get the best results from TPBT?
Q:4.16 How do I configure the IC-746 to use an optional filter?
Q:4.17 How do I configure the IC-746 to use a non-Icom filter?
Q:4.18 How do I use a CW filter in SSB mode to receive PSK31?
Q:4.19 Why is there only one optional 455Khz IF filter slot?
Q:4.20 Where do I install a 2nd Inrad 9Mhz IF filter?
Q:4.21 What are some popular filter combinations?

S:5. Computer Control

Q:5.1 How do I wire the IC-746 up for computer control?
Q:5.2 What cables do I need?
Q:5.3 What are CT-17, OPC-478, OPC-662 all about?
Q:5.4 What is the control protocol for the IC-746?
Q:5.5 What is CI-V?
Q:5.6 What is the CI-V address of the IC-746?
Q:5.7 What computer software is available?
Q:5.8 Where can I get computer software and upgrades?

S:6. Problems and Clarifications

Q:6.1 What's that funny rattling noise I hear when I first power on the
rig?
Q:6.2 What's that "click" I hear as I tune across certain frequencies?
Q:6.3 Why doesn't the ALC meter work while adjusting the "mic gain"?
Q:6.4 Why can't I program any numbers into the memory names,
Q:6.5 Why isn't my output power up at 100 watts?
Q:6.6 The backlight in my LCD has stopped working. What's wrong?
Q:6.7 Is there some way to get the Icom-746 to generate DTMF tones?
Q:6.8 Why don't my "band edge beeps" match the US amateur bands?

Q:6.9 Can I transmit all the way out to the "band edge beeps"?
Q:6.10 Can I reprogram the "band edge beeps"?
Q:6.11 Do we know anything about the "band edge beeps"?
Q:6.12 How I reset back to factory default settings?
Q:6.13 What "birdies" does the IC-746 have?
Q:6.14 How do I adjust the LCD display?
Q:6.15 The Noise Blanker doesn't seem to do any good. What's wrong?
Q:6.16 How do I adjust or make the NB work better?

S:7. Misc...

Q:7.1 Are there different versions of the IC-746?
Q:7.2 What TX/RX "mods" are there for the IC-746?
Q:7.3 What other "mods" are there for the IC-746?
Q:7.4 I'm brave; what other "mods" are there?
Q:7.6 What "external" mods are there for the IC-746?
Q:7.7 Can I operate 2m on reduced power?
Q:7.8 Where can I find plugs for the ACC connectors?
Q:7.9 What are the pin-outs on the ACC-1 connector?
Q:7.10 What are the pin-outs on the ACC-2 connector?
Q:7.11 Does audio to pin 4 of ACC-1 trigger the VOX?
Q:7.12 Where can I get replacement power connectors?
Q:7.13 Where can I get replacement microphone connectors?
Q:7.14 What is "Lo-Fi" SSB operation?
Q:7.15 What is "Hi-Fi" SSB operation?
Q:7.16 How does one improve the fidelity of a received signal?
Q:7.17 How does one improve transmission fidelity?
Q:7.18 Can the IC-746 transmit at less than 5 watts?
Q:7.19 How do I turn on both HF pre-amps at the same time?
Q:7.20 How do I adjust the 746 for best AM performance?
Q:7.21 Is the IC-746 suitable for CAP and MARS operation?

S:1. ADMINISTRIVIA

Q:1.1. What is an FAQ?
Q:1.2. Where can I get a copy?
Q:1.3. Where do I send feedback?

Welcome to the IC-746 FAQ.

Short Answer

FAQ stands for "Frequently Asked Questions". It tries
to cover common questions/problems/issues associated
with Icom's IC-746 HF/VHF amateur radio transceiver.

The master copy is kept at:

http://groups.yahoo.com/group/IC746/files/IC746-faq.txt

Mirrored copies (after a short delay) appear at:

http://www.qsl.net/kb9sss/IC-746/IC746-faq.txt

An older version (June 2001) is sitting at:

http://www.skysdaughter.com/icom746-faq

You do not need a Yahoo email account to access the
master copy, however, you will need a logon account.
Yes, that is a subtle but hopefully minor distinction.
Not everyone is willing to have a login account at Yahoo
(even if it is free), which is one of several reasons
for maintaining the mirror sites.

Also, we post the FAQ monthly to:

news:rec.radio.amateur.equipment

usually sometime between the 1st and the 10th.

You can post questions/comments about the FAQ to
the above newsgroup.

Long Answer

The format of this FAQ should become apparent right from
the start. Questions are grouped into related sections
and subsections, roughly in the form of an outline.
Questions start in column one with their composite
section number.

When possible/practical, there will be both a short
and long answer. The short answers will try to be
brief and to the point, typically about one paragraph.
While correct, quick, and immediate, it will often gloss
over subtleties and details. The long answers will cover
theory, alternatives, dissenting opinions, and other
supplemental material. We try not to unnecessarily
duplicate information between the answers (this one
is an example of that). Long answers may go on for
several pages.

The questions that are addressed here (as well as the
answers) come from several sources.

This FAQ was created by and is hosted by folks on a
Yahoo e-mail discussion group at:

http://groups.yahoo.com/group/IC746

www.qth.net hosts a more generalized Icom e-mail list
that covers all models, not just the IC-746. You can
lookup more information or subscribe to that list at:

http://www.qth.net/info/icom.info

Some of the info here originally appear upon a bbs
style on-line discussion group that used to be at:

http://vartel.com/icom746/icom746index.html
(site not responding Jan-2002)

There are also the following newsgroups:

news:rec.radio.amateur.equipment
news:rec.radio.swap

Specific comments or clarifications can be sent directly
to the FAQ coordinator. "Content submissions" would be
greatly appreciated. However, general discussion/debate
over the answers is best done in a more public forum,
like one of those mentioned above.

Q:1.4. What are the future plans for the FAQ?

Many have suggested/asked that the FAQ take on a
graphical rather than text format to better facilitate
charts, photos, diagrams, etc... That will probably
happen sometime in the spring of 2002. The two
front running formats are HTML and PDF.

Most of the power supply information will be separated
out into a separate FAQ that is applicable to all rigs.
This fits in better with the new ICOM Resource pages at:

http://www.qsl.net/icom/

Q:1.5. What questions still need to be answered?

There are plenty of topics that still need or deserve
to be covered. Here are some topics and details we'd
like information on (in no particular order):

* Levels and impedances of all audio connections
(mic, phones, acc, etc...)

* We still do not have enough reliable reports to
confirm what "birdies" actually exist.

* How does one go about hooking the 746 up for PSK,
TNC, and CI-V operations at the same time.

* CW Zero-Beat confusion
(as well as BFO and "reverse" operation)

* More information on the front panel power switch.

* More service and repair information

* Better explanation of band stacking registers

* Operating tips

* Instructions on how to use internal ATU

We welcome and encourage submissions.

Q:1.6. What does this abbreviation or TLA mean?

Hams use a lot of abbreviations and TLAs (Three Letter Acronyms), Toward the end of this document, is a small glossary to some of the abbreviations we use in the FAQ.

==========

S:2. GENERAL INFO

Q:2.1. Should I buy an IC-746?
Q:2.2. What are the IC-746's features?
Q:2.3. How does the IC-746 stand up to the ______ ?

Short Answer

Yes. Try it, you'll like it.

Long Answer

This FAQ is maintained by happy, loyal, and devoted IC-746 owners. What do you really think we're going to say?

One thing nearly everyone (both loyalists and detractors) agrees upon is that you should make every effort to try out a rig before purchasing it.

For features, check out the IC-746 specifications from brochures available at your local amateur radio equipment store, on-line documents at various vendor sites, or directly from Icom's WWW site at:

http://www.icomamerica.com/

On-line copies of the IC-746 sales brochure are at:

http://www.qsl.net/kb9sss/IC-746/IC-746-Brochure.pdf
http://groups.yahoo.com/group/IC746/files/IC-746-Brochure.pdf

Of particular interest might be the on-line copy of
the instruction manual.

Most of the 746's problems or faults show up either in
this FAQ (eventually) or in the archives at:

http://groups.yahoo.com/group/IC746

Probably the most objective, quantitative comparisons you
will find are the QST product reviews (freely available
to ARRL members):

http://www.arrl.org/members-only/prodrev/

Simpler, more limited, comparison charts are available
on the Amateur Electronic Supply WWW site at:

http://www.aesham.com/compare/comp_hf.html

User written reviews can be both more personal and
more detailed. They can also be more biased. You can
find plenty of them at:

http://www.eham.net/reviews

This topic has come up several times on Yahoo's IC746
discussion group. One of the more interesting threads
along these lines starts with message 1012 and ends
with message 1028. I'm told that message 1023 is
particularly good. Another good thread starts with 1049
and ends with 1077.

http://groups.yahoo.com/group/IC746/message/1012
http://groups.yahoo.com/group/IC746/message/1023

Q:2.4. Where can I buy/sell a used IC-746?

Usually when someone asks this on the internet, they are
looking for an on-line swap page. There are, of course,
plenty of other options. Most dealers have used/demo
equipment. Hamfests are a traditional favorite, as are
"swap nets" on HF.

That said; the two largest forums on the internet for
amateur radio gear are the USENET newsgroup

news:rec.radio.swap

and the infamous eBay auction site.

http://www.ebay.com

"Amateur Radio Trader" is both a magazine and a WWW
site devoted to amateur radio classifieds:

http://www.amradiotrader.com
(site not responding Jan-2002)

After those, you have your choice of dozens of
dedicated swap sites on the net. A few of them are:

http://www.arrl.org/RadiosOnline/
http://www.qrz.com/forum/
http://www.eham.net/classifieds/
http://www.k1dwu.net/hamtrader/

AC6V maintains an entire list of swap pages as part
of his excellent ham links/resource site.

http://www.ac6v.com/swap.htm

Q:2.5. How much is a used IC-746 worth?

Unlike used cars, there is no official "blue book"
for ham equipment. Only YOU can decide this.

Your best bet is to peruse the archives for

news:rec.radio.swap

over the past 6 months or so.

You might also check out one of the following sites

Electronic Boneyard Prices:

http://www.geocities.com/CapeCanaveral/Hall/8701/ham/boneyard.htm

E-Bay prices:

http://aade.com/hampedia/prices.htm

Virtual Hamfest - Recent Prices:

http://www.vhamfest.com/prices.html
(site not responding Jan-2002)

Good luck.

Q:2.6. Is there a dedicated HF net for the IC-746?

Yes, one was started in October, 2001.

It convenes 20M SSB near 14.2525 Mhz +/- QRM, on
Sunday evenings at 9:00pm Eastern time (6:00pm Pacific).

The folks that run the net shift it along with Daylight
Savings Time in the U.S.A. Therefore, during "standard"
time (last Sunday in October to the first Sunday in

April) the net starts at 0200 UTC Monday. During
"savings" time (first Sunday of April through last
Sunday of October) the net starts at 0100 UTC Monday.

For the curious, not all of the U.S.A. participates in
"daylight savings time". Likewise, portions of Europe
participate, but on a different timetable. A wealth
of information on DST can be found via Yahoo at:

http://dir.yahoo.com/Science/Measurements_and_Units/Time/Daylight_Saving_Time

or within the AC6V link indices at:

http://www.ac6v.com/opaids.htm#CLOCKTIME

or directly from NIST (the National Institute of
Standards and Technology) at:

http://www.time.gov

The folks in the Yahoo IC746 e-mail group try to maintain
a net calendar at:

http://groups.yahoo.com/group/IC746/calendar

Yes, you have to be a member of the e-mail group to
access their pages, but as a fringe benefit, you'll even
get an automatic e-mail reminder on the day of the event.

We've heard of a few other HF nets devoted to Icom
equipment in general. They meet at:

Sunday, 1700 UTC, 14.317 Mhz ssb
Sunday, 2100 UTC, 14.317 Mhz ssb

Q:2.7. Are there electronic copies of 746 instruction manuals?

YES! During the first week of November, 2001, Icom
made an electronic copy of the IC-746 Instruction Manual
(along with many others) available on their WWW site at:

http://icomamerica.com/support/documents/index.html

A backup copy of the manual is stored in the IC746
Yahoo group's "Files" area at:

http://groups.yahoo.com/group/IC746/files/IC-746-Instruction-Manual.pdf

as well as at the QSL.NET ICOM Resource pages:

http://www.qsl.net/kb9sss/IC-746/IC-746-Instruction-Manual.pdf

Additionally, the FCC posted the IC-746pro instruction
manual (and various other documents) at:

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/prod/oet/forms/reports/Search_Form.hts?mode=Edit&form=Exhibits&application_id=740578&fcc_id=AFJIC-746PRO

A backup copy of both parts of this manual is stored
in the IC746 Yahoo group's "Files" area at:

http://groups.yahoo.com/group/IC746/files/IC-746pro-Instruction-Manual-1.pdf

http://groups.yahoo.com/group/IC746/files/IC-746pro-Instruction-Manual-2.pdf

While Icom has relaxed a little in providing these
documents, they are still protected by copyright.
Please, treat them accordingly. Remember, Icom is
doing us a favor.

Q:2.8. Are there electronic copies of 746 service manuals?

No such copies currently exist, although they would
quickly become popular if they did. As of May 2001,
Icom had no plans for creating one. Additionally,
Icom considers any such external productions to be a
violation of their copyright. Ray (the product manager
at the 2001 Hamvention) was very firm on this.

Hard copies are available through any Icom retailer as
well as through the W7FG Vintage Manual WWW site at:

http://www.w7fg.com/

Q:2.9. How do I fix the font substitution error in the PDF manual?

When trying to read the PDF version of a 746 Instruction
Manual with the Adobe Acrobat Reader, some people
encounter the following three dialogs on page 10 of
the document (PDF page 12).

A font required for font substitution is missing.

An error has occurred that may be fixed by
installing the latest version of the Japanese
Language Support package.

Unable to find or create font
"Ryumin-Light-Identity-H". Some characters may
not display or print correctly.

The error is not fatal. There are a few dozen places
in the manual where text in diagrams will show up as
a series of dots.

You can get rid of the error by downloading the
appropriate Asian font package directly from Adobe's
support pages. As of November, 2001, the appropriate

link was:

http://www.adobe.com/support/techdocs/2a156.htm

Q:2.10. How does an IC-746s differ from an IC-746?

Japan has a 3rd Class license that is power limited
(sort of like the defunct US Novice class). The IC-746s
is identical to the IC-746, except that it caters to
this limited operating class. It's output power is
limited to 10w on HF and 20w on VHF.

Nobody has yet reported a "mod" for this rig to bring
its power up.

Q:2.11. What is the IC-7400?
Q:2.12. What is the IC-746-PRO?

These are both successors to the IC-746. The IC-7400
is the Japanese version while the IC-746-PRO is the
English version. We don't know yet what else (if
anything) differentiates them.

There are two ways to look at the IC-746-PRO. Some
view it as a beefed up IC-746 while others view it as
a watered down IC-756-PRO. On the outside, it looks
and operates very much like the IC-746. The controls
are similar enough that you confuse the two. However,
the inside (RF chain and DSP) is more like the IC-756-PRO
than anything else.

Here are some features that the IC-746-PRO has over
the IC-746:

+ 32bit DSP with 24bit ADC
+ Selectable digital filters (50+)
+ Sharp or Soft filtering (via DSP)
+ Digital TPBT
+ Manual digital notch filter (in addition to ANF)
+ Twinned Digital APF (great for RTTY?)
+ DSP based RTTY decoder
+ Adjustable digital noise blanker
+ Digital TX/RX equalization (instead of analog)
+ Digital speech compressor (instead of analog)
+ Digital voice recorder

You'll notice how prominently the DSP plays in this rig.

One thing the original 746 has over the 746-PRO is an
additional IF stage, thus its TPBT is actually going

through two offset IF filters. The 746-PRO achieves its TPBT via the DSP. Its argued that the DSP filtering more than makes up for the lack of the extra filter and is more programmable/flexible. It's counter argued that DSP filtering is not as effective as traditional IF filtering (the 746-PRO instruction manual even eludes to this) and that insufficient filtering early on overtaxes the DSP.

Both are excellent rigs and only time will tell just how effective DSP really is. Perhaps someday Icom will make a rig with both.

Here are some of the features the IC-756-PRO has that the IC-746 does not.

- Dual watch receiver design
- Real-time spectrum scope

Additionally, the IC-746-PRO retains the basic form factor, LCD, control layout, and bonus 2m capabilities of the IC-746.

Plenty of sales and technical information is available (including downloadable pictures and brochures) from Icom's WWW site at:

http://www.icomamerica.com/

There is a Yahoo discussion group devoted to the IC-7400, as well as a group devoted to the 746 series in general.

http://groups.yahoo.com/group/IC7400
http://groups.yahoo.com/group/IC746

Icom has not yet made a copy of the IC-746-PRO available in electronic form, however, the FCC has. You can access it and other information at:

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/prod/oet/forms/reports/Search_Form.hts?mode=Edit&form=Exhibits&application_id=740578&fcc_id=AFJIC-746PRO

And a nice ham-written synopsis appears at:

http://www.qsl.net/ab4oj/ja7ude/ic7400.html

Q:2.13. Where can I find info on other Icom rigs?
Q:2.14. Where is info on the 706, 718, 756, 765, 735, ...

This FAQ is devoted to the IC-746. As of November, 2001, we do not know of any FAQ's devoted to other Icom models. However, as of Jan-2002, a project was underway to start accumulating and centralizing Icom information at:

http://www.qsl.net/icom/

While the coordinator of this list already has their
hands full, they would be glad to advise, help, and
collaborate with people interested in maintaining
other FAQs.

Much of the generic information in this FAQ is applicable
to other Icom rigs, but please, use common sense when
trying to apply it.

For general information on other Icom rigs try:

Icom's WWW site at:

http://www.icomamerica.com/

Icom e-mail discussion group at:

http://www.qth.net

Usenet newsgroup:

news:rec.radio.amateur.equipment

The definitive collection of "mods" for all makes and
models of amateur radio equipment is at:

http://www.mods.dk/

Yahoo Groups hosts more than 40 e-mail/WWW discussion
groups related or devoted to Icom equipment. Here are
some of the more than 50 Icom related groups there.

http://groups.yahoo.com/group/icomr2
http://groups.yahoo.com/group/ICOMR3

==========

S:3. Accessories

S:3.1. Power Supplies

Q:3.1.1 What power supply should I use with the IC-746?

Short Answer

Any good quality, communications grade, power supply
rated at least 20 amps or more (continuous duty) should
do just fine. However, most of us use larger supplies
(for a variety of reasons).

Popular supplies that are known to work (via testimonial):

Alinco DM-330MVT 30/32A switching
Astron RS-35M 25/35A linear
Astron SS-30 25/30A switching
Astron SS-25 20/25A switching
MFJ 4125 22/25A switching (MightyLite)

MFJ 4225 22/25A switching
MFJ 4035-MV 30/35A linear
Samlex SEC-1223 23/25A switching
Kenwood PS-52 20/22A linear

Popular supplies to avoid (via testimonial):

Astron RS-20 - overloads too easily
Kenwood PS-30 - overloads too easily
Diamnond GZV-4000 - RF hash on 40/20m

Long Answer

This question typically arises for one of two reasons. Either someone wants to buy a new power supply, or they have an existing power supply that they want to use. In both cases, the issues are: load capacity, size, weight, electrical noise, mechanical noise, cost, features, and appearance. Buying a new supply gives you a lot of options; there are plenty of great supplies out there. With an existing supply, you have no control over these factors; you're simply looking for a "fit".

You'll want to consider the following factors.

Reviews

QST tested and reviewed many supplies in January and September, 2000. You'll find the results informative. ARRL members can access those and other reviews on-line at:

http://www.arrl.org/members-only/prodrev/pdf/pr0001.pdf

http://www.arrl.org/members-only/prodrev/pdf/pr0009.pdf

Transportability

The larger the capacity, the larger and heavier the supply. If size and weight are critical for you, consider a "switching" supply as they are usually less than half the size of a "linear" supply.

Electrical Noise

All supplies generate some electrical noise. Typically the noise from linear supplies will be in the form of AC hum while from switching supplies the noise will be RF hash. Communications grade power supplies of either type are designed to minimize the noise, and generally cause no problem. (i.e. this is not a good place to cut corners)

"Computer" power supplies that are pressed into radio service are particularly bad when it comes to electrical

noise.

Usually, the harder you push a supply (the heavier the load), the worse the noise will become.

Mechanical Noise

Many supplies have cooling fans. Sometimes, the fans are loud enough to be a noise problem themselves. Fan noise is variable from supply to supply (even within the same manufacturer and model). Likewise, hearing tolerance varies from operator to operator. Thus, it's hard to tell in advance if a specific supply will have a problem. Time may yet tell.

We do know that fans are driven by load. The closer you operate to a supply's capacity, the more the fan runs.

Also, some of the transformers used in linear supplies will generate an audible hum. The transformer itself vibrates with the AC supply. Mass seems to help here. Usually (not always) the heavier the transformer, the less the hum.

Its pretty easy to put a noisy power supply under a table, behind a cabinet, or elsewhere to cut down on the noise level. Just be careful to allow proper air flow for cooling.

Features

Most of us consider current limiting, over voltage protection, and high temperature shutdown to be mandatory in a new supply.

Fuses or breakers are required for UL certification. Buy spare fuses right away; they never blow at a convenient time.

Meters are non-essential, they are luxury items. They make the supply bigger and more expensive. However, they can be very handy and even fun. Lets face it, most hams enjoy gadgets.

Adjustable output voltage is a useful feature, more useful than you might realize. Most new supplies have it (usually internally).

Load Capacity

The size, weight, and cost of a power supply all tend to increase with its load capacity. Those factors encourage us to get the smallest supply we can. There are also factors that encourage larger supplies; such as noise,

heat, accessories, etc...

The IC-746 specifications list a current drain at maximum transmit power of 20A at 13.8Vdc. Thus, the recommendation that your supply should handle 20 amps (or more) continuously.

It is possible to run the IC-746 with a smaller supply, but extreme caution and discipline are required. Very few, if any, of us recommend it for normal operation.

For example, the 20 amp maximum in the IC-746 specifications is full key-down at full power. You could just lower your RF power to help match your load to the supply. You could even run the IC-746 QRP, drawing as little as 3-4 amps on transmit.

Another factor is operating mode. Some of us have measured full-key loads as high as 21-22 amps. Normal SSB transmit at full power draws 6-15 amps. But FM, digital, and CW will generally pull 18-20 amps at full power.

Continuous vs. Intermittent Load

There are issues concerning a supply's "intermittent", "peak", or "surge" capacity. A supply might be rated for 16 amps continuous and 20 amps peak. Normally, the IC-746 runs at about 2-3 amps for receive and only hits the 20 amp maximum during transmission. Thinking of transmitting as "peak" or "intermittent" activity can lead one to think that such a supply is acceptable. It might even be. However, a problem develops when we try to define what peak or intermittent activity is.

Everyone would agree that transmitting for 3 minutes at 20 amps till the repeater time-out cuts you off is not a peak. How short a time constitutes a peak and at what duty cycle? Without some sort of specification or standard, "peak" and "intermittent" could mean just about anything. Most of us feel more comfortable with a "better safe than sorry" approach.

This dual rating system for power supplies is a great source of confusion. Specifically, you could buy a power supply rated for 20A and have it fail under full load. The Astron RS-20 and Pyramid PS-21 are examples of such supplies. While both are excellent supplies, they just can't keep up with an IC-746 under full power.

The exact definition of intermittent, peak, or surge as used by the power supply manufacturers has not been established.

(Some of us are going to try to talk to the
supply manufacturers about this to get more
details)

To quote a tech from Samlex:

Maximum rating is surge current requirement for
starting reactive loads or short term dynamic
loading and is limited to a few seconds.

This supply is not designed for pulsing loads.

Currents beyond the maximum rating will force the
unit into current limit and the output voltage
will drop and it will no longer be regulated.

Meanwhile, MFJ said (of the MFJ-4322):

Our units will shut down at surge. At 25 amps
surge, the power supply will shut down at about
ten seconds.

So while it is theoretically possible, most people do
not use supplies rated less than 20 amps continuous.
In fact, most use substantially bigger supplies.

Bigger Supplies

Why use a bigger supply? There are several reasons.

As noted earlier, the closer you operate a supply to
its rated capacity, the greater the electrical noise,
mechanical noise, heat, etc...

Strain leads to wear-and-tear. So it can be argued
that a bigger supply should last longer.

The IC-746 is rated at 20 amps max, but loads as high as
21-22 amps have been measured. "Your mileage may vary"
definitely applies.

The continuous rating is generally based upon an
ambient air temperature of 20 C. The rating degrades
as the temperature rises, by how much, we're not sure.
Filed Day conditions will be stressful to your supply.

13.8 V times 20 A yields 276 watts. There's a tendency
for some supplies to drop voltage a little when they
get hot or overloaded. There's also a tendency for
some radios to increase their current pull when the
voltage drops. At 12 Vdc, that same 276 watts would
imply 23 amps. You push the supply capacity, which
drops voltage a little, which drives the rig current
up, which pushes the supply further ... then BANG.
You blow a fuse. (AK6R has actually seen this effect
with his 756pro)

There are plenty of other devices that need DC power.
You need to account for them as well.

Other and future rigs may have greater power demands
(like the 756pro). Extra capacity now may avoid the
need to upgrade your supply in the future.

You might well spend most of your time in a low power
situation (SSB QRP) and get by with less than 5A.
But, in an emergency, you and your gear may be called
upon to operate in different modes, at higher power,
and with heavier duty cycles. Planning ahead for the
worst case usage helps prevent an untimely failure at
just the wrong time.

Conclusion

So, you'll find most of us with power supplies ranging
from 20 to 30 amps continuous; and some with even
bigger supplies.

S:3.2. Antennas

Q:3.2.1 What antenna should I use with the IC-746?

Short Answer

Any antenna you want.

Long Answer

Seriously. ANY antenna will work with the IC-746,
with the proper interfacing. People have even made
contacts using dummy loads.

Antennas are probably the most uniquely individualistic
aspect of any ham station. Antenna selection is a BIG
topic; much too big to deal with in an FAQ (at least
for this one).

The IC-746 has 50 ohm, unbalanced, coaxial RF outputs.
With the automatic ATU capable of handling SWR mismatches
of up to 3:1 on HF (and 2.5:1 on 6 meters), you have
a wide variety of choices available to you.

There are many excellent books on the topic; the ARRL
has a couple dozen of them. A good one to start with is:

The ARRL Antenna Book

At over 800 pages (and over 1,000 antennas), you're
sure to find SOMETHING that fits your style and budget.

For more information, try hanging out on one of over
50 e-mail groups on the topic at

http://groups.yahoo.com

or visit one of the hundreds of antenna oriented WWW
sites indexed by AC6V:

http://www.ac6v.com/
http://www.ac6v.com/antprojects.htm

or follow along with the discussions on the newsgroup:

news:rec.radio.amateur.antenna

or visit the on-line antenna magazine:

http://www.antennex.com/

or, you could just put up a trusty old dipole.

Just be sure you do use an antenna. The IC-746 does not
like to transmit into an open load (no connected antenna).
It will put an undue (and possibly fatal) strain on your
output transistors.

Q:3.2.2 What range can the automatic antenna tuning unit (ATU) handle?

Officially, the automatic ATU in the IC-746 can handle SWR
mismatches of up to 3:1 oh HF and up to 2.5:1 on 6 meters.
In practice, many people get even wider ranges.

The ATU does not function on 2 meters.

Some have pointed out that, even though the internal tuner
may tune a particular antenna configuration, if there
is a high SWR, you could end up burning out the tuner.

We have at least one case (reported by KG6GLN) where the
detector diodes in an IC-746 were fried. According to
the ICOM tech, "... it could happen if you tried to
use an external antenna tuner in conjunction with the
internal tuner. "

Q:3.2.3 Will the internal ATU handle "random" wire antennas?

No.

The internal ATU can only handle an SWR mismatch of
about 3:1 on HF and 2.5:1 on 6 meters. You'll need
an external ATU.

Q:3.2.4 Are there any "tips" to using the ATU?

You mean, besides the tips already provided on page 58
of the Instruction Manual? Yes.

The ATU appears to pay attention to the reflected
power, not the SWR. [Note: we'd love someone to
analyze the schematics to confirm or deny this.]
This is evidenced by two effects.

When starting from a close match at QRP power levels,
the auto ATU doesn't always home in on the best match.
Increasing the power level and tuning again often
improves the match, which the ATU then retains when
returning to QRP power.

The converse situation can also cause trouble.
When starting from a poor match at full power, the auto
ATU sometimes can't find a match at all. In this case,
tuning at lower power allows the ATU to get a match,
which the ATU then retains when returning to high power.

If one end of a band consistently gives you trouble
while the other end tunes easily, then you may still
be able to coax the ATU into matching the antenna.
Start in the portion of the band where the ATU works
and tune there. Then, move your way across the band
in increments (maybe 25Khz at a time), tuning as you
go until you reach the desired portion.

Q:3.2.5 Can I use the internal ATU along with an external ATU?

Maybe. Theory says yes, but Icom says no. The results
are mixed. Use at your own risk.

Many people use an external ATU along with their IC-746.
Usually, they leave the external ATU switched to "bypass"
and let the internal ATU do its thing. For troublesome
bands/antennas, they turn off the internal ATU and
engage the external one.

Others use an external ATU to match their antenna to
the middle of the desired band and let the internal ATU
handle the rest. In theory, the ATU doesn't know or
care what's hooked up to it; it simply tries to match
up to the impedance it sees.

In most cases, either of the above approaches work fine.
Many hams have been applying both for years with no
problems.

However, some IC-746's have had their ATUs go out from
fried detector diodes and driver transistors. On many

repairs, Icom has blamed the failure upon external tuners. One ham was told that external tuners can cause problems even when they are switched to "bypass".

Nobody has been able to adequately explain why an external tuner would cause such damage, particularly when bypassed. Some speculate that tuning with low power is safer than tuning with high power (if nothing else, its at least more polite).

We need more information on this, but at least you've been warned.

Q:3.2.6 Does the internal ATU work on receive?

Yes. The internal ATU is enabled while receiving.
Of course, it can only "match" while transmitting.

It's unclear if the internal ATU acts as an additional preselector when enabled.

Q:3.2.7 How do I use a "beverage" antenna?
Q:3.2.8 How do I use different antennas for receive vs. transmit?

As previously stated, nearly ANY antenna can be used with the IC-746, provided it can be matched to the 746's 50 ohm, unbalanced antenna terminals. However, there is more to using a "beverage" antenna than just impedance matching.

Beverage antennas tend to sacrifice gain in order to improve their signal to noise ratio. So, while they are good for receiving, they are poor for transmitting. Therefore, you would typically use a separate antenna for transmitting.

While not convenient, the IC-746 can be configured to use one of its antenna ports for transmitting and the other for receiving. Run the rig in split mode with both VFOs on the same frequency, but have VFO A use antenna 1 and VFO B use antenna 2.

A more traditional approach (albeit, more work) is to take the HF transmit signal from one of the accessory ports activate a coaxial relay (via a driver transistor) to switch between antennas. This is the same basic setup you would use to control an external amplifier.

Q:3.2.9 How do I measure SWR while in SSB?

Usually, you don't. Measuring SWR requires a signal.
The only way to get a signal on SSB is to modulate;
i.e. you talk.

The simple thing to do is to switch modes to either
AM or RTTY briefly. After making your measurement,
switch back to SSB.

Q:3.2.10 How do I tune up in CW without a key?

Usually you don't. You probably don't even want to
be in CW mode without a key.

Odds are, you're trying to tune up for a different
mode, for example, PSK on SSB. The simplest thing
to do is switch briefly to AM or RTTY and tune there.

If you insist upon tuning up in CW without a key,
then you really only have one option; simulate a key.
You could turn on the mic-keyer, which uses the scan
buttons (UP/DN) operate the keyer. Or you could wire
up a dummy key jack and key the rig by plugging the
dummy jack in and out. There's even one ham who uses
his headphones as a dummy key, but very few of us are
willing to take that risk!

Q:3.2.11 Can I make the TUNER button activate an external ATU?

Yes. The IC-746 has a connector designed to directly
connect to the Icom AH-4 automatic antenna tuning unit.
Page 80 in the instruction manual describes hookup and
operation. Once installed, pressing the TUNER button
for 2 seconds will cause the rig to transmit 10w in CW
mode until the AH-4 finishes.

Connecting and operating an LDG tuner is exactly the
same; they even make a cable specifically for the task.

Connecting and operating an SGC tuner is exactly
the same; except that you'll have to make your own
interface cable. Instructions for that are at:

http://www.sgcworld.com/products/Couplers/icom706.html

Sure, the page says its for the IC-706, but the external
ATU interface is identical to that of the IC-746. Once
wired up, operation will be just like for the AH-4.

Finally, you could just fake the IC-746 into thinking
that there is an ATU out there with a dummy plug like
that available from W2ENY at:

http://members.fortunecity.com/w2eny/tenatuner/

Operation is similar to that for the other tuners, but
transmission stops after an 8 second timeout instead of
by tuner acknowledgement.

Q:3.2.12 Why doesn't the rig SWR meter match my external SWR meter?

Its normal for different points along the RF "feed"
to register different SWR readings. The SWR meter in
the 746 reads the SWR between the final amplifier stage
and the tuner. Your external SWR meter reads the SWR
between the tuner and the antenna. The external meter
should always read greater than or equal to the meter
in the 746.

This is not to say that the internal SWR meter is
accurate. Posts that suggest that the internal SWR meter
reads lower at lower output power than at full output
power. The effect is noticeable, but not pronounced.

S:3.3. Microphones

Q:3.3.1 What is the best microphone to use with the IC-746?

In theory, your favorite microphone is the best choice,
provided you hook it up and adjust it properly.
Its basically just a matter of personal preference.

The confusion lies in the definition of "best".
Most users generally agree that the stock hand mic is
generally adequate for general use, but is not "best"
or "optimal" for any specific use. You know the tale;
jack of all trades, master of none.

If you want better transmit fidelity (or even broadcast
quality sound), then you'll want a full range microphone,
possibly with a dynamic element. Icom's own SM-20
gets good reviews for this application, as does Heil
Goldline microphones. Other microphones will also work;
these just happen to be the most popular.

Many operators have found that the inexpensive studio
microphones from Radio Shack work astonishingly well.
Yielding 90% of the performance at 10% of the price
makes this a viable, budget conscious, choice. It
also shows just how poor the stock mic is.

If you're after more "punch" for DXing or contesting,
then you'll want to look into one of the Heil DX

style microphones. They're frequency responses have
been tailored to accentuate the portions of the voice
spectrum that most contribute to understandability.
Their great performance have made them very popular.

For those of you who "want it all", Heil even makes
a microphone that switches both ways, literally.
It has two pick-up elements in the same mic, so you
can change between ragchewing and DXing punch at the
flick of a switch.

Who says you can't have your cake and eat it too?

Q:3.3.2 Can I hook up a different microphone directly to the IC-746?

Yes, but only if properly wired.

There is more to wiring up an external microphone than
just the differing pin-outs. You will also have to deal
with: DC bias, signal level, and impendence.

Icom uses electret elements and incorporate preamps
right into their hand mics. The DC power is fed directly
from the rig through the mic cable. If you are using a
different electret microphone, by sure it will operate
with the 8 Vdc bias. When using a dynamic microphone,
be sure you have a capacitor (value not critical,
around 1.0-4.7 uf) in the circuit to block the DC
supply voltage

Depending upon the microphone, you may have to use a
hefty amount of mic gain (and possibly compression as
well) to make up for the lack of the handset pre-amp.
You may even need to use an out-board microphone preamp
to get the signal high enough.

Finally, the Icom microphone input is at a relatively
high impendence (1-2K ?). A matching transformer (or
preamp) will yield the best results. Most microphones
operate at only 600 ohms impendence, and the impedance
mismatch will exacerbate the signal level deficiencies.
Some microphones operate at much higher impedances
(as high as 100K) and, unmatched, will suffer from
distortion in addition to signal level problems.

Since you're already wiring up a new mic cable, you
might want to short pins 6 and 7 with the chassis ground
to assure that they are at the same ground potential.
This often helps reduce RFI from coming in through
the mic cable.

Q:3.3.3 Can I use a Heil microphone with the IC-746?

Yes, most Heil microphones work well with the IC-746.
Bob does this himself.

As with any dynamic microphone, be sure you have a DC
blocking capacitor in the circuit to isolate the mic
element from the DC supply voltage Heil's pre-wired
mic harnesses are perfect for this.

A notable exception is the HS-706 which (as the sales
literature clearly states) ONLY works on the IC-706
series.

Q:3.3.4 How do I adjust the IC-746 for a Heil headset?

In theory, the IC-746 has enough microphone gain to use
an unaided Heil microphone. Heil's May, 2000, newsletter
discusses this topic, see:

http://www.heilsound.com/newslettermay00.htm

In short, you use moderate mic gain (50-75%, 12-3
o'clock position) along with moderate compression
(8-10db, 12-1 o'clock position) for the best results.

Q:3.3.5 Do I need a pre-amp to use a Heil microphone?

While the above procedure works for most rigs, it does
not seem to work for everyone. For the few that still
have gain problems, adding the Heil HMP microphone
pre-amp should work.

Some speculate that the differing mic gain requirements
are due to different versions of the IC-746, or simply
due to widely varying component tolerances. Nobody has
collected enough information yet to nail this issue down.

DO NOT use the HMP pre-amp unless you're sure you
need it. Too much gain will distort your transmitted
audio; with all the usual detriments (hard to copy,
splatter, etc...)

If you decide you need a pre-amp but want to build it
instead of buying it, then check out:

"Build a low cost Boost Microphone"
QST, Aug, 1989

along with the Icom specific mods available (DC blocking
capacitor, etc...) from KK5DR (Matt Erickson) at:

mailto:kk5dr@ev1.net

Another good QST article on microphone preamps is:

"Adapting the Astatic D-104 Microphone
for use with Modern Transceivers"
QST, Aug, 1999, p.34

a copy of which can be found at:

http://members.aol.com/ampmicro/

Q:3.3.6 What are the pin-outs on the microphone connector?

As listed on page 67 of the Instruction Manual:

1 - mic input
2 - +8V DC Output
3 - freq up/down
4 - Main readout squelch switch
5 - PTT
6 - GND (PTT)
7 - GND (MIC)
8 - AF Out (varies with [AF]) (center pin)

S:3.4. Keyers

Q:3.4.1 Can I hook up my straight key to the front "Elec Key" Jack?
Q:3.4.2 Can I connect my own Electronic Keyer to the IC-746?
Q:3.4.3 How do I wire up my paddles for use with the internal keyer?

Short Answer

Yes, virtually any type of key/keyer can be connected
to the IC-746 via either the front "Elec Key" jack
or the back key jack. However, the two jacks require
different wiring, and only the front jack will give
access to the internal electronic keyer.

The front "Elec Key" jack on the radio accepts a
3-conductor 1/4 inch stereo phone plug and can be wired
for use with anything. The back "key" jack accepts a
2-conductor 1/4 inch mono phone plug and can be wired
for use with either a straight key or an external keyer,
but not for the internal keyer.

See page 68 in the operator's manual for wiring details
and pages 23 and 27 for the programming details.

Long Answer

FOR A STAIGHT KEY OR EXTERNAL KEYER:

For a diagram on how to wire the stereo plug see page 68
of the Instruction Manual. For a straight Key or keyer,
wire only the tip and the Sleeve, and leave the ring
as No-Connect.

tip ring sleeve
oooo ====]]]]]]} ---------> 2 cond wire to key/keyer
(+) (nc) (-)

The back "key" jack is a mono 1/4 inch phone plug and
is easy to wire.

When using the front Jack, You also have to set the
radio to recognize that the ring is not used. To set
the radio, You do have to go to the "key", "set"
menu and tell it you will be using a straight key.
See Page 23 and page 27 in the operation manual.
While in CW mode press KEY(F4), then press SET(F5),
Press the down arrow(F2) until you reach the sixth menu
(KEYER TYPE), Use the Main tuning knob to set the type
of keyer to "Straight Key".

TO USE THE BUILT IN ELECTRONIC KEYER WITH PADDLES:

Wire the 3cond Stereo plug (use the front jack) so
that the "Dit" is the tip, the "Dash" is the ring and
the sleeve is common(-). (You can also wire up a "bug"
this way (without electronic keyer))

oooo ====]]]]]]} ---------> 3 cond wire to paddles
(dit) (dash) (-)

To set the radio to use the internal electronic keyer,
You do have to go to the "key", "set" menu and tell
it you will be using paddles. See Page 23 and page
27 in the operation manual. While in CW mode press
KEY(F4), then press SET(F5), Press the down arrow(F2)
until you reach the sixth menu (KEYER TYPE), Use the
Main tuning knob to set the type of keyer to "Elec Key".
(or "bug Key" to use the bug without electronic keyer)

Q:3.4.4 Can I use the internal and external keyers at the same time?

Sure ... you can have an iambic keyer plugged into
the front, and a straight or external electronic
keyer plugged into the back. You can then use either
interchangeably.

We don't yet know of anyone brave enough (let alone
capable) to actually use both keys SIMULTANEOUSLY.
Would such an person be a "two fisted" operator? 8)

==========

S:3.5. Amplifiers

Q:3.5.1 How do I hook up an Icom IC-PW1 RF power amplifier?

The electrical connections are easy, just follow the
diagram at the top of page 79 in your instruction manual.

Then carefully read the instructions that came with
the IC-PW1 because they can be confusing.

Paraphrased (thanks to WA0SXV), the procedure is:

Turn everything on, set the 746 to full power,
and key up in RTTY.

Adjust the ALC pot on the back of the PW1 to
set the IC-PW1 ALC meter to the mid-scale point.

Power out on the amp should now read around 500w if
you are using 110 or 1000w if you are using 220vac.

No adjustments are needed on the 746 --- the PW-1
ALC should take care of that. When properly adjusted
the power output scale on the 746 will read something
around 35-50w.

Q:3.5.2 What if I hook up more than just an IC-PW1?

The PW-1 manual claims that you will not have to mess
with the CI-V addressing. That's not always true.
If the IC-PW1 is directly connected to the IC-746 (on
default CI-V address 54h and 56H respectively) with no
other devices, then the PW-1 auto-config routine senses
the IC-746 and everything works just fine.

If you introduce additional devices or alternative
interfaces (such as the DX4WIN logging software using
the "$10 Radio Shack" interface, talking to the IC-746
in CI-V address 56H) then the PW-1 can become confused
and stop talking to the IC-746.

One solution to the problem is to set both the IC-746
and DX4WIN for CI-V address 54H - the same as the PW-1.

(But, shouldn't each device have a distinct address??)

Q:3.5.3 How do I hook up a non-Icom RF power amplifier?

Start by examining the diagram at the bottom of page
79 in your instruction manual, but be careful, it can
mislead you into some expensive mistakes.

The ground and antenna connections are just as
straight forward as they appear, no problems there.

The SEND jack requires special attention. The IC-746
manual lists the wrong voltage and current limits
for the send relay. The actual limits are 12Vdc/20ma
(this is also listed in the manual errata). You will
need an external switching relay to avoid overloading
the internal relay.

Also, not all amplifiers will have compatible ALC control
signals. The IC-746 ALC input runs from 0 to -4 Vdc.

Q:3.5.4 Do I need an external amplifier switching relay?

Yes. If you hook up an external power amplifier, then
you will need an external amplifier switching relay or
circuit (see above). You have several to choose from:

Ameritron ARS 702
MFJ ARB-702-I
W2ENY Amplifier Interface

The send relay in the IC-746 (and others) closes 10 to
11 milliseconds before the start of the RF and opens
about 7 milliseconds after the end of the RF. If you
use a relay between the rig and the amp it had BETTER
BE FAST. The relay in the amp needs to be closed before
the start of the RF. This means the amp relay AND your
intermediate relay together must be faster than 10 msec.

All of the solutions listed above should be fast enough.
However, if you're going to homebrew a solution, you
then might consider a semiconductor circuit instead of
a mechanical relay; it will operate faster that way.
Of course this means you need to know the keying polarity
from the amp.

Q:3.5.5 My SEND relay seems to be stuck, what do I do?

Odds are, you'll have to replace it, either yourself
or via Icom service.

It is possible (battle field repair) to free the contact
by tapping the relay till it frees; but YMMV! This
solution is temporary at best.

Q:3.5.6 Can't I just use the ACC port to key my amp?

An Icom IC-PW1? Yes. Any other amp? No. Use an
external switch (either relay or solid state) via the
SEND jack.

==========

S:4. IF Filters

Q:4.1 How many optional IF filters can I install into the IC-746?

There are two (2) slots for optional filters in the 9Mhz IF,
and one (1) slot for an optional filter in the 455Khz IF.

Q:4.2 What optional IF filters are available for the IC-746?

Available filters for the 9Mhz IF include:

Icom FL-101 250 hz (CW narrow)
Icom FL-232 350 hz (RTTY, CW narrow)
Icom FL-100 500 hz (CW/RTTY narrow)
Icom FL-223 1.900 Khz (SSB narrow)
Icom FL-103 2.800 Khz (SSB wide)
Inrad 121 250 hz (CW)
Inrad 111 400 hz (CW)
Inrad 320 1.800 Khz (SSB)
Inrad 110 2.100 Khz (SSB)
Inrad 123 2.800 Khz (SSB wide)

Available filters for the 455Khz IF include:

Icom FL-53A 250 hz (CW narrow)
Icom FL-52A 500 hz (CW/RTTY narrow)
Icom FL-222 1.800 Khz (SSB narrow)
Icom FL-44A 2.400 Khz (SSB)
Icom FL-96 2.800 Khz (SSB wide)
Icom FL-257 3.300 Khz (SSB wide)
Inrad 306 125 hz (CW) (might not fit)
Inrad 122 250 hz (CW)
Inrad 116 400 hz (CW)
Inrad 322 1.800 Khz (SSB)
Inrad 314 2.100 Khz (SSB)
Inrad 109 2.400 Khz (SSB)
Inrad 124 2.800 Khz (SSB wide)

(The Inrad 306 is listed on their WWW site,
and is electrically compatible, but might
not fit in the available socket.)

The Icom crystal filters with an "A" suffix (FL-44A,
FL-52A, FL-53A) all have 6mm lower case heights than the
equivalent filters without the "A". They are electrically

identical to the taller filters. There is some question as to whether there is enough clearance to install one of the larger filters into the 746.

While not an optional filter, W2ENY has a kit to modify the IC-746 by replacing either the stock 9Khz or 15Khz wide internal filters with a 6Khz wide filter. See the "mod" question of the FAQ for more details.

Q:4.3 Which optional IF filters should I buy?

Better to ask, "Why would I even need filters?".

Quite possibly, you'll won't need any optional filters. Use the Twin PassBand Tuning (TPBT) to dynamically adjust your IF bandwidth first. Properly used, TPBT can give you nearly any bandwidth you want. You may decide that you don't need any anything else.

There are over a thousand possible combinations of optional filters (1,539 at the last count). Most of them will make sense (i.e. be useful) to someone, somewhere. As it is a matter of style and situation, ultimately, the choice will be up to you.

We've broken up this issue into several questions, each targeting a more specific issue or problem. Short of writing a book, it is the only hope of providing any useful answers.

At the end of this section, we've listed some popular combinations. Don't use a filter combination just because it's popular. Optional filters could total $500 or more. Understand what and WHY you're buying to make sure you get your money's worth.

Q:4.4 What is an IF filter's "bandwidth"?
Q:4.5 What is an IF filter's "shape factor"?

Also called "passband", a filter's bandwidth is a measure of how wide a signal will pass thru the filter. For IF filters, this is typically measured as the span between the filter's -6db points. (Some folks measure bandwidth at the -3db points. Pay careful attention to the specifications when comparing filters)

"Shape factor" tries to represent steepness of the filter's attenuation curve. Typically defined as the ratio of the -60db passband to the -6db passband (bandwidth). The perfect shape factor of 1.0 is

unobtainable. Shape factors of 2.0 or less are considered excellent.

This is one of those situations where a picture is worth a thousand words. A good look at the spectral response curve of a typical filter will make these terms clearer.

Inrad publishes basic performance curves of most of their filters on-line. An example of a typical curve is:

http://www.qth.com/INRAD/graphs/116.gif

AB4OJ has a complete set of passband curves for Icom's filters on his WWW site at:

http://www.qsl.net/ab4oj/icom/filters/filters.html

Several companies have good on-line treatments describing basic filter characteristics, complete with diagrams.

Corning Frequency Control has a very concise page styled in a glossary format at:

http://www.ofc.com/filters/definitions.html
(site not responding Jan-2002)

Vectron International also has a nice on-line treatment of filter characteristics at:

http://www.vectron.com/products/xtal/filter.htm#definition

The folks at Piezo Technology Inc. describe filter characteristics with attenuation curves.

http://www.piezotech.com/Technical_Information/techindex.htm

Q:4.6 Why do filter "bandwidth" or "shape factor" matter?

Narrower bandwidths reject more noise and improve sensitivity. Wider bandwidths provide better fidelity.

Narrower bandwidths also reduce the number of simultaneous signals the rig can "hear". This reduces the AGC pumping action caused by nearby signals, particularly important for CW and digital modes.

Smaller (tighter) shape factors reject more noise and improve selectivity. Larger (wider) shape factors generate fewer problems/complaints with fidelity or ringing.

Q:4.7 What is considered to be a narrow filter?

In the context of (and for the purposes of) this
FAQ, a narrow filter is any filter that has a smaller
bandwidth than the stock 2.4Khz wide filters. However,
most texts will describe a filter as being narrow if
its bandwidth is smaller than that of the desired signal.

Q:4.8 What are narrow IF filters used for?

Usually, narrow filters are used to reject unwanted
signals or noise. The narrower the bandwidth, the less
noise there will be and the better the sensitivity.
You can lose part of the desired signal in the process,
but that may be preferable to the interference you're
trying to reject.

Q:4.9 Can an IF filter be too narrow?

Yes, an IF filter can be too narrow, but sometimes, that
can actually work to your advantage. We'll describe
only a few specific situations as examples.

When the IF filter's bandwidth is less than the bandwidth
of the desired signal, then part of the signal will be
rejected. This degrades the fidelity (quality) of the
received signal. In phone modes, the fidelity loss is
often mistakenly perceived or described by operators as
"distortion".

Fortunately, the inherent information redundancy of
human speech allows it to be readable even when an overly
narrow filter has rejected part of the desired signal.
That's where our advantage comes from.

One form of interference is when a nearby signal
overlaps your desired signal; as in an overcrowded band.
Rejecting the interfering signal necessarily rejects
part of the desired signal as well. Thus, the filter
is too narrow to allow all of the desired signal
to come through, but it is narrow enough to reject
the interference. While the result is "distorted" in
comparison to a clean signal, it is still more readable
than if you left the interference there.

Another example would involve CW or PSK31. The more
narrow the filter is, the less the interference and
noise. In these modes, it's almost impossible for a
filter to be narrow enough to actually reject part of
the desired signal, as in the previous phone example.
Instead, when a CW/PSK31 filter gets too narrow,
you start to experience the auditory equivalent of

tunnel vision. This can make it difficult to scan
around for signals.

One of the handy things about TPBT is that you can
narrow your effective IF filtering bandwidth at any time.

Q:4.10 What's the difference between IF filters from Inrad vs. Icom?

Inrad filters tend to have a superior shape factor to
Icom's (smaller numbers are better) as well as deeper
stopbands. They also tend to be cheaper.

When dealing with adjacent channel interference, the
filter shape (depth and slope of the attenuation curve)
is generally the prime factor. Inrad filters tend to
outperform the Icom filters for this application.

For example. The stock Icom filter in the 455Khz IF
has a -6db bandwidth of 2.4Khz and a -60db bandwidth of
about 5Khz. That gives it a shape factor of about 2.1
The comparable filter from Inrad has a shape factor of
1.6, a -6db bandwidth of 2.4Khz and a -60db bandwidth
of 3.8Khz.

This all means that the Inrad filter has a steeper
attenuation curve, resulting in better extraneous signal
rejection and improved selectivity.

The Inrad filters tend to have greater ultimate
attenuation than the Icom counterparts. Thus, Inrad
filters tend to do a better job of adjacent signal
rejection than Icom's filters.

However, while the 455Khz Inrad filters are drop-in
replacements for the Icom counterparts, the 9Mhz filters
are not. They need a short piece of coax and a connector
to wired up to the filter first. The adapting connector
plugs into the filter slot, thus alleviating any mods
to the radio itself. Reported assembly times range
from 1-4 hours per filter, depending upon the skill
and care of the installer.

Finally, some claim that there is an insertion loss
to the Inrad filters vs. the Icom filters. However,
it's been demonstrated that dropping the noise level
also drops the S-meter reading, possibly accounting for
the reports. Bench tests do not show any insertion loss.
Your ears may vary.

Q:4.11 Which IF should I put an optional filter into?

Realistically, the performance differences between
using filters in the 9Mhz IF vs. the 455Khz IF are fairly
small and will probably go unnoticed in normal operation.

Most people make this decision based upon slot
availability and filter cost.

Q:4.12 What's different between IF filters for 9Mhz vs. 455Khz?

The 455Khz IF filters tend to have superior performance
characteristics while the 9Mhz IF filters tend to be
less expensive.

Q:4.13 What are the 9Mhz IF filters best for?

When dealing with interference from nearby signals,
the sooner you reject the unwanted signals from your
RF chain, the better. So a single narrow IF filter
in a 9Mhz slot may outperform a single filter in a
455Khz slot.

Q:4.14 What are the 455Khz IF filters best for?

On the other hand, filters in the 455Khz IF seem to do
a better job of eliminating background noise, possibly
due to their superior performance characteristics.

Q:4.15 How do I get the best results from TPBT?

TPBT works best when the 9Mhz and 455Khz IF filters have
closely matching bandwidths. Non-matching bandwidths
will still work, but are less intuitive, which can
cause confusion.

There are several techniques to using TPBT. The one
described below has the virtue of simplicity.

Starting with both filters in their center, detented,
position (widest effective bandwidth), tune in your
desired signal as accurately as possible.

Grasping both IF shift knobs simultaneously, adjust for
the best sound. If you have a nearby, interfering
signal, then you'll probably have the best results
shifting your bandpass away from it.

Now, adjust just the 455Khz IF shift (the inner knob)
in the opposite direction for the best sound.

Q:4.16 How do I configure the IC-746 to use an optional filter?

After you've installed a filter, you need to tell
the radio about it. Using the SET menu, tell the radio
which filter you've installed (by Icom part number)
and which slot it is in. Then, hold in the FILTER
button for two seconds to bring up the filter selector.
Cycle through your available filters by mode and by
wide/narrow until everything is set up the way you want.

See the operator's manual for details.

Q:4.17 How do I configure the IC-746 to use a non-Icom filter?

You have to lie to the rig.

All of the IC-746 filter settings are on the basis of
Icom part numbers. (This is supposed to make things
easier for new operators.) Just tell the rig you've
installed the Icom crystal that most closely matches
the one you're actually using.

Lying to the rig does have a side effect.

The 746 cannot actually shift the IF filters' passbands.
Instead, the 746 shifts the LO frequencies of the 2nd
and 3rd IF stages to shift the signal back or forth,
aligning the edge of the desired signal with the computed
edge of the filter's passband.

Small lies generate small effects, like when you
tell the rig that a 2.1Khz wide filter is actually
1.9Khz wide, yielding a 100hz offset in the control.
Larger lies generate larger effects, like when you tell
the rig that a 400hz filter is actually 2.4 Khz wide,
yielding a 1,000hz offset in the PBT control.

Q:4.18 How do I use a CW filter in SSB mode to receive PSK31?

Icom took their ease of use one step further, and
programmed the rig to prevent the use of a CW filter
while in SSB mode; probably to prevent what they
considered to be a foolish user error. They didn't know
about PSK31 at that time. So again, you lie to the rig
during setup, telling it that the crystal is wider so
that the rig will allow you to select it for SSB use.

Q:4.19 Why is there only one optional 455Khz IF filter slot?

Nobody knows for sure, but the most popular speculation
is that it made the radio cheaper.

Q:4.20 Where do I install a 2nd Inrad 9Mhz IF filter?

According to K7ZL, the place Inrad tells you to put
the filter is way over on one side in a little opening
next to a fan, and that works fine. But he has found a
second location. When you have the rig opened, if you
go on a line from the 9 Mhz filters, then to the 455
Khz filters, and keep on going towards the front panel,
you will see a square metal plate on the circuit board.
He mounted his second filter on top of the metal plate,
on its side, and it seems to work fine.

Q:4.21 What are some popular filter combinations?

"Popular" does not necessarily equal "best". Don't do
something just because it's popular. Read the above
material so that you can make an informed choice.

For example, one of the "best" optional filters for an
IC-746 is a 2.4Khz wide crystal filter for the 455Khz IF
(either the Icom FL-44A or the Inrad 109). The superior
characteristics over the stock ceramic filter probably
improves every one of the important receiver specs.
However, the filter is unpopular. Most hams simply
have trouble justifying $100-200 for a filter "they
already have".

Given that caveat, here are some popular filter
combinations you might want to ponder.

** None

** Single 500hz wide CW filter in either IF

** Dual 500hz wide CW filters, one in each IF

** Single narrow SSB filter in either IF

** Dual narrow SSB filters, one in either IF

** One wide CW and one narrow SSB filter at 9Mhz IF

Icom vs. Inrad? 455Khz vs. 9Mhz? Mostly a matter of
preference (read above) and probably not as important
as you think, otherwise, you need to read the more
detailed material above.

==========

S:5. Computer Control

Q:5.1 How do I wire the IC-746 up for computer control?
Q:5.2 What cables do I need?
Q:5.3 What are CT-17, OPC-478, OPC-662 all about?

The IC-746 is computer controllable through a serial interface, but it is not RS-232. This is both good and bad. Bad, because you can't just plug it straight into your computer (wrong voltages, etc...). Good, because you can control four separate rigs with the same serial line. Therefore, to connect the IC-746 to a computer requires some interfacing. Icom made three: the CT-17, OPC-478, and OPC-662.

The CT-17 is the full boat. Versatile, it will allow 4 rigs to be controlled by a single RS-232 serial line. It's also the most expensive option and requires external power.

If all you want to do is connect up a single rig, then Icom's WWW site lists the OPC-662 remote PC control cable as the official part. If you can find it, then great. Most people can't. Instead, many hams have successfully used the OPC-478 PC cloning cable. It's less than half the cost of the CT-17. However, it is very short (1 ft ?) and will require a 1/8 inch stereo to mono plug adapter for use with the IC-746.

When you buy the RS-746 remote control software from ICOM, it comes with a single rig cable (OPC-662 or OPC-478?).

W2ENY sells a complete CT-17 clone and a single rig cable. They're both more complete package than Icom's, coming with cables and software resources on a CD-ROM. They're also cheaper. You can find out more at:

http://www.geocities.com/w2eny/civ/

http://www.geocities.com/w2eny/icom_cable/

You could purchase the nearly universal rig interface, the RigBlaster, from the folks at West Mountain Radio. It does a lot more than simply computer control, and is adaptable to other manufacturers (for a price).

http://www.westmountainradio.com/

There's really not that much circuitry in "simple" interface cables, and many have homebrewed them for as little as $10. Supposedly, the November 2000 issue of QST has a suitable design (with feedback in the January 2001 issue). On-line circuit diagrams based on the QST article appear at:

http://www.ambersoft.com/Amateur_Radio/Icom_Interface.jpg

and

http://www.qsl.net/civ_commander/interface.jpg

KD6UU posted detailed schematics and instructions
on eham.net:

http://www.eham.net/articles/1588

and then wrote an excellent updated follow-up article at:

http://www.qsl.net/kd6uu/icomci.html

The actual design of the interface circuit is subject
to debate (as the above link will make clear). Several
alternative designs (along with a wealth of related
information) are available from DF4OR's WWW site at:

http://www.plicht.de/ekki/civ/

A few other sources for CT-17 circuit information are:

http://www.g3vgr.co.uk/civ.htm

http://www.seed-solutions.com/gregordy/Amateur%20Radio/Experimentation/CIVInterface.htm

You can also purchase many renditions of these hardware
interfaces from a variety of sources:

Universal RS232 Serial Interface for Icom/Yaesu

http://www.butel.nl/icomr2/icom11.html

K1NU ICOM Computer Control Interface

http://home.att.net/~k1nu/k1nu/Products/

RTS-01 Computer Interface cable for Icom HF Radios

http://rtsars.com/othercables_template.cfm

Q:5.4 What is the control protocol for the IC-746?
Q:5.5 What is CI-V?

CI-V is the control protocol used by ICOM for remote PC
control of their equipment. The basics of the protocol
are documented in the Instruction Manual on pages 74-75.
However, most people will prefer the documentation
available from DF4OR's WWW site at:

http://www.plicht.de/ekki/civ/

or the documentation that comes shipped with W2ENY's
control cables:

http://www.geocities.com/w2eny/civ/

http://www.geocities.com/w2eny/icom_cable/

W7FG Vintage Manuals has listings in their catalog
for both the CT-17 Level Converter and for the CI-V
Communications Interface on their WWW site at:

http://www.w7fg.com/

Q:5.6 What is the CI-V address of the IC-746?

The CI-V address of the 746 is $56 (hexadecimal).

Q:5.7 What computer software is available?
Q:5.8 Where can I get computer software and upgrades?

There are several choices (compromises?) available.
On one end of the spectrum, we have programs that
replicate nearly all of the IC-746 controls on the
computer. On the other end, there are programs that
do computer assisted contact and contest logging.

There is a fairly comprehensive listing of CI-V
compatible software on DF4OR's WWW site at:

http://www.plicht.de/ekki/civ/

We'll mention some of the available software options
below. User reviews for some of the below software
can be found at:

http://www.eham.net/reviews/

and

http://www.qrz.com/search.pl?topic=reviews

** Icom RS-746 software

Icom SELLS a program called RS-746; buying it
is certainly the path of least resistance. It is
available through the usual retail channels. It comes
complete with both software and the necessary cabling
(OPC-662?). Many people describe it as a thing
of beauty. (Of course, beauty only runs skin deep.)

A description of the software can be found at:

http://www.icomamerica.com/amateur/hf/746soft.html

To quote ICOM's own support FAQ (circa May 2001):

Q: Where can I download the ICOM PC programming (or cloning) software?

A: The ICOM programming software is not freeware, and is not available for download on our Web site, or anywhere else on the Internet. It must be purchased either from an authorized Icom America dealer, or direct from ICOM. RT Systems also develops programming software for ICOM radios.

Ray (the product manager at the 2001 Hamvention) was very firm on this issue. They take a dim view of the pirated copies available on the internet.

Last word we know of (January 2001), Icom had no plans to update/fix/enhance the RS-746 software.

** RT Systems software

OK, so Icom refers us to RT Systems at:

http://www.rtsars.com/

However, as of May 2001, RT Systems does not have a 746 control program. They told N8AVX (in February 2001) that they had no plans to do so either.

** Kingsmith Software

Kingsmith Software is developing control software for the IC-746 (RATS IC-746), but as of May 2001, it wasn't available yet. More information is available at their WWW site at:

http://www.kingsmith-software.com/

** W2ENY

W2ENY ships a CD-ROM with lots of software and documentation along with the PC to rig interface cables he sells. Many of the packages listed here are also on his disk.

http://www.geocities.com/w2eny/civ/

http://www.geocities.com/w2eny/icom_cable/

** RadioComm

Arachnophilia has several programs: RadioComm, IcomControl, and EasyTuner (among others). Check out the download section on their WWW site is at:

http://www.arachnoid.com/

** YP Log

Tony Field (VE6YP) makes a radio control and logging program called YPLOG that can control up to 4 rigs at a time and supports logging and contesting. His WWW site is at:

http://members.shaw.ca/ve6yp/

** TRX Manager

Some say that TRX Manager by F6DEX has more features than the original radios. More info can be found at:

http://www.trx-manager.com/

http://www.hosenose.com/trx-manager/

** XMLOG

The freeware logging software produced by W1ECT also talks directly to the IC-746. You can learn more at either the WWW site:

http://www.xmlog.com

or at the yahoo e-mail group site at:

http://groups.yahoo.com/group/xmlog

** TR Log

One of TR-Log's claims to fame is that it will run on just about any PC. More details at:

http://www.qth.com/tr/

** CI-V Commander

A package that integrates well with the DxLab software suite. More details at:

http://www.qsl.net/civ_commander/

** IRC

One of IRC's claim to fame is selectable skins. You get to choose what you want your radio to look like, be it IC-746, IC-706, or even a 007 spy watch. More details at:

http://n9zle.tripod.com/

** ScanCat

Very extensive scanning support, including automatic digital recording to your hard disk,

http://www.scancat.com/

==========

S:6. Problems and Clarifications

Q:6.1 What's that funny rattling noise I hear when I first power on the rig?

Often, its the antenna tuning unit. The relays make audible clicking/rattling sounds.

Q:6.2 What's that "click" I hear as I tune across certain frequencies?

The clicking noise you hear is very likely from the relays for the rig's preselector (the service manual calls them RF filters). At each boundary point, the rig switches in a different RF filter. There are several:

0 - 1.6 Mhz low pass
1.6 - 2 Mhz band pass
2 - 4 Mhz band pass
4 - 8 Mhz band pass
8 - 11 Mhz band pass
11 - 15 Mhz band pass
15 - 22 Mhz band pass
22 - 30 Mhz band pass
30 - 50 Mhz band pass
50 - 54 Mhz band pass
54 - 60 Mhz band pass
108 - 174 Mhz band pass

Some mistakenly call this the antenna tuner (there is even some component overlap), however, the preselector and tuner serve different purposes and are each switched in and out accordingly.

Q:6.3 Why doesn't the ALC meter work while adjusting the "mic gain"?

Despite what the manual says, the ALC meter only works for SSB; not FM, CW, or RTTY. Nobody knows what (if anything) the ALC reading means on the other modes.

Q:6.4 Why can't I program any numbers into the memory names, the CW memory keyer, etc...?

Use the keypad to enter numbers. The dial only does letters and punctuation.

Q:6.5 Why isn't my output power up at 100 watts?

One possibility is your DC supply voltage. As shipped, the IC-746 really wants a full 13.5 Vdc to yield full output power. Check the actual voltage your rig is receiving. You may need to adjust the voltage setting on your power supply.

If your rig isn't getting the voltage you think it should, then check for voltage drops along the power cord and across joints and connectors. It's possible to lose as much as a half volt per connection. Solder joints and use high quality connectors where possible.

12 AWG wiring is the minimum, but 10 AWG is better.

If you absolutely can't get your voltage up (for example, total battery power), then you might consider adjusting the power settings for RF PAs (there are 4 of them). However, trying to run a full 100w output at the reduced voltage will most likely degrade the quality of your transmitted signal (clipping, IMD, etc...). Most hams decide that the 1-2db gain doesn't justify the crumby signal.

One last possible remedy for the low voltage problem. You could get a DC-DC voltage converter. Such a device accepts 12Vdc in and yields 13.8Vdc output. There's a price. First, they tend to only be 80-90% efficient, so a 20A draw by the IC-746 can translate to a 25-29 amp draw by the converter. Secondly, commercial units like the Newmar 12-12-35I DC-DC Converter can retail for more than $900. There are homebrew versions that can handle the low current requirements of a true QRP rig, but none that can handle the high current demands of the IC-746. If somebody finds/designs one, we'd like to hear about it.

Q:6.6 The backlight in my LCD has stopped working. What's wrong?

Short Answer

Its probably one of the display driver transistors on the S-Logic board behind the display. It will have to be replaced.

Long Answer

Unfortunately, this has become a problem for some 746's. It's not the actual 'lamp' itself, but one of the driver transistors. The lamp is fluorescent, and will probably never wear out. Even if it did, the lamp isn't available as a separate part; it's part of an assembly you need to get from Icom.

There is a DC/AC converter driving the "lamp". Check the S-Logic board for transistors Q301, Q302, Q303, and Q304. Q302 is the most likely culprit as it is the voltage regulator for the dimmer function. If you have a DC voltage on the collector which is variable by the dimmer function on the radio, then this transistor is probably OK. Q303 and Q304 are the next most likely candidates. These 2 transistors are in push-pull configuration to drive the X-former (base is 180deg phase shift by the X-former)

Refer to pages 6-1, 9-1, 10-1, and 11-2 in the "Service Manual" for more details.

Several folks at:

http://groups.yahoo.com/group/IC746

have successfully performed these repairs themselves.

OZ5ACI feels that the way the Q302 transistor is mounted is a design flaw. Icom used the cooling fin of the transistor as a soldering point, thus if it gets too hot, the solder might melt. That slowly deteriorates the soldering material resulting in a lost connection and a cooked transistor. He has a feeling that future cooked transistors can be prevented by simply unsoldering the transistor cooling fin to lift it and lengthen the center leg to establish connection at the cooling fins soldering point.

AH6LE counters that if the transistor gets hot enough to melt solder (300 degrees or so), then there are other more serious problems. Most solid state devices won't survive such temperatures, thus we're seeing the result, not the cause.

OZ5ACI used an "overkill" transistor from his junk box and had to cut a bit of the cooling fin to make it fit under the shield. The original transistor (2SB1201) is not very tall and can be left at an angle so no cutting is needed (or wanted!). He says it's all fairly simple. The only trouble is that the front section of the 746 has to be taken totally apart and getting it back together with no dust behind the plastic screen is a pain. Get yourself a small can of workshop compressed air or CO2 if you can.

Of course if your 746 is still under warranty, you may want to consider going that route. Either way, contact Icom for the parts you need.

Q:6.7 Is there some way to get the Icom-746 to generate DTMF tones?

No. The IC-746 will not generate DTMF tones.

However, you have some options for generating DTMF tones yourself.

The good news is that Icom's compatibility table shows that the HM-14 DTMF hand microphone will work with the IC-746. It even comes with a handy switch to enable/disable the UP/DN buttons. Remember, you have to press the PTT switch to use the DTMF pad.

The bad news is that the HM-14 is a discontinued item, so availability is limited. Also, as K9HFX discovered, there are apparently two versions of the HM-14. The version without the scan button enable/disable switch did not work for him. More information is needed.

While not listed on Icom's compatibility charts as such, VE2MHF reports that the HM-56A also works, even the scan buttons and 14 DTMF memories. However, beware, as VE4HAY reports that the DTMF pad on the HM-56 will also work with the IC-746, but it's scan buttons will not. We have to be careful of the 'exact' model numbers.

Icom confirms that the HM-118T will work with a suitable wired adapter. There is also speculation (but no confirmation) that an HM-95 microphone might also work with a suitably wired adapter. If you succeed with such an experiment, please let us know.

KC2CJW has successfully adapted an Alinco EMS-11 microphone for use on the IC-746. You'll need two cable-mount 8-pin microphone connectors (one female, one male), a couple of inches (maybe a foot) of decent multi-conductor cable, a 470 ohm resistor, and some soldering skills. Paul can provide pin-outs upon request.

Another option is a portable tone dialer, such as one that you could get at any Radio Shack. Just send the tone sequence right through the microphone. Not all such devices give access to the 'A' - 'D' tones, but those tones don't get used much anyway.

Some have suggested wiring a DTMF pad into a microphone cable, much like what you would do for a TNC. However, as yet, nobody has shared any success stories.

Q:6.8 Why don't my "band edge beeps" match the US amateur bands?

Nobody knows what (if anything) the band edge beeps
correspond to.

Q:6.9 Can I transmit all the way out to the "band edge beeps"?

Yes, you can transmit all the way out to the beeps.
The IC-746, as shipped from the factory, can transmit
outside of the amateur radio bands. This has been
tested and confirmed on several rigs via dummy loads.

Q:6.10 Can I reprogram the "band edge beeps"?

No, there is no known way to reprogram the band edge
beeps. There are no fixes or planned updates from Icom
dealing with them.

Q:6.11 Do we know anything about the "band edge beeps"?

The band edge beeps generate a lot of discussion and
speculation. As of June, 2001, the band edge beeps on
all tested rigs correspond to:

1.8 - 2.0 MHz
3.4 - 4.1 MHz
6.9 - 7.5 MHz
9.9 - 10.5 MHz
13.9 - 14.5 MHz
17.9 - 18.5 MHz
20.9 - 21.5 MHz
24.4 - 25.1 MHz
28.0 - 30.0 MHz

If you know of an UNMODIFIED rig which differs from this,
then please let us know.

While nobody has figured out what the band edge beeps
correspond to, we have been able to rule out several
possibilities.

They do not correspond to the amateur radio frequencies
in Japan. For that matter, they do not correspond to
the ham allocations in any of the IARU regions.

They are not a combination of all available amateur
radio from around the world (i.e. a minimal superset).
They are much wider than that.

As wide as the band edge beeps are, they do not encompass
all of the MARS (Military Affiliated Radio Service) or
CAP (Civil Air Patrol) frequencies. To do that still

requires a "mod".

Any other ideas or info?

Q:6.12 How I reset back to factory default settings?

The procedure is listed on page 81 of the Instruction Manual.

While pushing in [F-INP] and [M-CL], push [POWER] to turn power ON.

Q:6.13 What "birdies" does the IC-746 have?

"Birdies" are spurious signals internal/inherent to the rig itself. They are normally generated by harmonics and/or mixing products of the internal oscillators (IF, VFO, display driver, CPU clock, etc...) that are picked up by one of the RF/IF stages of the rig.

Birdies are usually perceived as silent carriers on AM and FM and as steady tones on SSB and CW; sort of like someone tuning up on that frequency. Thus the perceived frequency of occurrence is affected by your preferred sidetone.

Often, local noise sources can be mistaken for birdies.

True birdies tend to be consistent from rig to rig.

The following frequencies have been submitted as possible birdies. There have not been enough correlated reports yet to confirm these as birdies. More information and reports are needed.

Q:6.14 How do I adjust the LCD display?

Page 66 of the Instruction Manual describes how to
change both the LCD contrast and the LCD backlight.

Push MENU to select M2. Push button to select LCD.
Push buttons to select lighting or contrast. Turn tuning
knob to adjust value.

Q:6.15 The Noise Blanker doesn't seem to do any good. What's wrong?

Probably nothing. Possibly your expectations.

Noise blankers are placed in the IF signal path, and
designed to gate/mute/attenuate out impulse noise.
Impulse noise is characterized by very sharp pulses
(steep rise time and short duration) such as ignition
spikes and certain types of power-line noise.

A good clue comes from the 746 service manual. The NB
adjustment procedure uses square wave pulses 30 mv high
and 1 msec long.

Therefore, a NB is not a panacea. Unlike an ANL or DSP,
a NB will have little or no effect upon static crashes
and/or white noise. Noise generated by power supplies,
fluorescent lights, and power inverters are generally
unaffected.

The NB works best when impulse noise is strong and the
signal is weak; like mobile in a vehicle.

Most hams report that the 746's NB is effective against
ignition noise, but not as effective as other rigs
they've owned.

Noise blankers are not all that sophisticated, and will
try to blank out anything that resembles an impulse; even
sharp voice peaks in an audio signal. Sometimes, the NB
will generate more noise than it removes.

The IC-746 NB is operating within the first IF, where
the passband is about 15 Khz wide. Any impulse like
component of a nearby strong signal may activate the
NB, again possibly doing more harm than good. Also,
strong nearby signals can fool the NB into fluttering

the receive audio.

The single best way to deal with impulse noise is
to eliminate it at the source. A NB (any NB) is a
compromise solution at best.

Q:6.16 How do I adjust or make the NB work better?

The NB is susceptible to both overload and cross
modulation from strong nearby signals. Often, turning
off the RF preamp or even turning on the attenuator
will improve the performance. Remember, the IC-746
has plenty of gain to spare.

The IC-746 Service Manual does have an adjustment
procedure for the NB on page 5-10. Icom Tech Support
provided W7GJ with a PDF copy of that page around
Jun-25-2001. That PDF file is now available from
several places.

http://www.bigskyspaces.com/w7gj/IC-746.pdf
http://groups.yahoo.com/group/IC746/files/IC-746-NB-Adjustment.pdf
http://www.qsl.net/kb9sss/IC-746/IC-746-NB-Adjustment.pdf

==========

S:7. Misc...

Q:7.1 Are there different versions of the IC-746?

Yes, there are at least two distinct versions of
the IC-746.

While most of the indications are circumstantial,
one definitive piece of evidence are the two different
procedures for modifying the transmit/receive range.

Another definitive indication are the 2m differences
between the U.S., Japanese, and European versions.
In Japan, the IC-746 has different auto-repeater offsets
and is limited to only 50w RF output. In Europe,
the IC-746 does not transmit above 146Mhz and has no
auto-repeater offsets at all. There's also a version
in Australia that is limited to 20/8 watts on 2m for
FM/AM.

There are varying reports about the necessity of a
microphone pre-amp when using Heil microphones, leading
some to speculate upon differences in the microphone
input circuitry. K9HFX was unable to generate DTMF
with an HM-14 microphone; that might be related.

There isn't enough information yet to be conclusive.

Some rigs seem to have problems with the transistors
that drive the LCD backlight, some do not. This might be
due to a circuitry change, or a difference in assembly.
The jury is still out.

The only way the issue will be resolved conclusively
is for someone to organize a data collection effort
to sort out these details by serial number. So far,
no one has volunteered.

Q:7.2 What TX/RX "mods" are there for the IC-746?

"mod" is slang for "modification".

Most people who ask about modifying their radio are
looking for ways to make the IC-746 transmit or receive
additional non-amateur RF bands. The 746 already has
general receive coverage from 0.5 to 60.0Mhs, so no
"mod" there.

Modifying the IC-746 to transmit outside of the
amateur bands is generally considered to be illegal.
There are a few exceptions; like perhaps MARS/CAP,
transverter usage, changes/additions to ham bands,
etc..., but they can become controversial.

Icom will give you the correct mod for your IC-746 based
upon your serial number, providing you give them a copy
of your MARS license to prove eligibility. If you let
Icom make the mod for you (small fee plus shipping),
then the mod will not void your warranty

That said, MARS/CAP/TX/RX modifications for the IC-746
(and many other radios) can be found at:

http://www.mods.dk/

Another source for the TX/RX mods is QRZ.COM

http://www.qrz.com/download/mods-i-k/ic746.txt

Pay close attention, as there are two distinct mod
procedures which correspond to the differing placement
of the programming diodes on the PCB.

Q:7.3 What other "mods" are there for the IC-746?

Not all mods are about TX/RX frequencies. Here are
some of the others.

W2ENY has devised a way to replace the stock 15KHz or
9MHz IF filters for AM work with 6KHz filters.

http://www.geocities.com/w2eny/icom/filter.htm

AH6LE has modified his IC-746 to provide safe sequencing
for EME work.

http://www.ah6le.net/radiomods.html

OK2WY has a "Simple CAT / programming interface for
ICOM RIGs". Rumor has it that he has also designed an
in-board step attenuator.

http://www.qsl.net/ok2wy/projects.htm

K7YVZ has proposed a mod to the VHF section to provide
separate transmitting and receiving antenna ports.
The details can be found at his WWW site:

http://www.qsl.net/k7yvz/746mod/

G4YTL describes the same thing at:

http://www.mods.dk/mods.php3?radio=icom&model=ic-746&selectid=1919#1919

While not technically a "mod", NI4L has outlined the
alignment procedure for increasing the RF power output
above 100 watts. Opinions differ as to how much strain
this may or may not place upon the PA transistors or
upon the internal ATU. The alignment procedure can be
found at:

http://www.mods.dk/

Some folks have replaced the transistors that drive
the LCD backlight in an attempt to prevent overloading
and burnout. See the question devoted to LCD lamps for
more details.

N0UK (Chris) came up with a "poor man's" TCXO that
substantially reduces frequency drift, particularly
for 2m. He stuffed the 60 Mhz LO compartment with

a few "cotton wool balls". It doesn't eliminate
the drift entirely, but does slow it down to a crawl.

Q:7.4 I'm brave; what other "mods" are there?

While several other "mods" have been discussed, to date,
we don't know of anyone brave enough to try them.

Upgrading the Stock Ceramic IF Filter to a Crystal Filter

The stock 455 Khz IF filter is a 2.4 Khz wide ceramic.
The PC board is drilled and traced for a full fledged
crystal filter (either from Icom or Inrad). In theory,
replacing the cheapo ceramic filter (Murata CFJ455K)
with a superior crystal filter should improve the rig's
performance. One source of info claims that to do
this mod requires changing 2 resistors (R701 and R704)
from 10K to 3.9K to change the impedance seen by the
filter from 2K to about 1.2-1.5K.

Replacing PIN Diodes in the Demodulator

Likewise, it is speculated that the IC-746 has cheapo
PIN diodes in the detector circuit. Again, in theory,
replacing these with higher quality components
(preferably matched) would improve performance, in
particular, the 3rd order intercept point.

Removing the BCB Attenuator

A few folks have noticed that the IC-746 is less
sensitive below 1.6Mhz. This appears to be due to an
additional attenuator being switched in to protect
the first RF amplifier from overload by broadcast
transmitters. Some theorize that removing the extra
attenuator (by simply bypassing it with a jumper) would
improve the sensitivity, while others point out that the
atmospheric noise level is too high to put any additional
sensitivity to use.

Again, we don't know of anyone willing to admit to
performing any of these modifications. If you perform
one of these (or some other esoteric "mod"), then we'd
love for you to share your results with the rest of us.

Q:7.6 What "external" mods are there for the IC-746?

These mods are made on the IC-746 internal circuitry,
but are external interfaces of one sort or another.

Remote, Direct Frequency Entry Keypad

W2FS wrote an article for the Dec 99 QST entitled
"A Direct Frequency Entry Keypad for ICOM Transceivers".
The "Millennium QSYer" is based upon that design and
available from:

http://www.john.hansen.net/keypad.htm

Cordless Headset Microphone

Some hams have come up with a clever way to add
a cordless headset to their rig. Basically, you
find a cordless phone with a soundcard interface on it;
something designed to work with your PC as an internet
phone. (the IBM3330 900Mhz phone is a popular choice)
You hook up the phone to the transceiver like you would
a PC, and then use VOX to control TX/RX. Some have
had great success. W8WWV provides all the details at:

http://www.seed-solutions.com/gregordy/Amateur%20Radio/Experimentation/CLessPhone.htm

---

Automatic Antenna/Amplifier Selection by Band

WD7S wrote an article for the May 2000 QST entitled
"Automatic Amplifier Selection for the ICOM IC-746,
IC-736 and IC-706MKII Transceivers".
Hewitt, Paul, WD7S
May, 2000, QST, p.33

K6XX has similar circuitry described on his WWW site
at:

http://www.k6xx.com/radio/icbsciv.html

TX/RX Sequencer

G3SEK outlines a complete TX/RX sequencer for handling
more complicated transceiver/transverter/amplifier hookups.

http://www.ifwtech.com/g3sek/dx-book/sequencer/

Q:7.7 Can I operate 2m on reduced power?

Sure, just turn down the RF output power control (along
the bottom front edge of the rig).

Too inconvenient? Then you could get inside and tweak
the pots that control the RF PA settings. There are 4

of them for HF, 6M, 2M and AM (R989, R991, R993, and R990 respectively). Refer to your Service Manual for details.

Q:7.8 Where can I find plugs for the ACC connectors?

They are 7-pin DIN connectors (the old style AT keyboards used 5-pin Din). A couple (of many) possible sources are:

Digi-Key http://www.digikey.com/

BUX CommCo http://www.buxcommco.com/

Your local electronics store either have them or can get suitable substitutes. For example, most Radio Shacks have the 8-pin DINs in stock (#274-026). They are compatible after you remove the center pin.

Q:7.9 What are the pin-outs on the ACC-1 connector?

Page 72 of the Instruction Manual has the full scoop, Here is a brief description.

1 RTTY (FSK) HIGH > 2.4 Vdc
Low < 0.8 Vdc
< 2 ma output current

2 GND ground

3 HSEND (HF PTT) ground to transmit on HF
goes to ground when transmitting
< 20 ma output current
< 200 ma input current

4 MOD (audio in) 100 mV rms at 10,000 ohms

5 AF (audio out) 100-300 mV rms at 4,700 ohms

6 SQLS goes to GND when squelch opens
0.1 ma current

7 13.8V max 1A output current

8 ALC (0 to -4VDC yields 0 - 100W)

Q:7.10 What are the pin-outs on the ACC-2 connector?

Page 72 of the Instruction Manual has the full scoop, Here is a brief description.

1 8V (< 10ma) (+/- 0.3V)

2 GND same as ACC-1 pin 2

3 HSEND (HF PTT) same as ACC-1 pin 3

4 BAND 0-8 Vdc depending upon band

5 ALC same as ACC-1 pin 8

6 VSEND (VHF PTT) ground to transmit on VHF
goes to ground when transmitting
< 20 ma output current
< 200 ma input current

7 13.8V same as ACC-1 pin 7

Q:7.11 Does audio to pin 4 of ACC-1 trigger the VOX?

Pin 4 of ACC-1 does not trigger the VOX circuitry,
nor is the level of that input affected by the front
panel mic gain control.

Q:7.12 Where can I get replacement power connectors?

Short Answer

The connector you need is often called an "OEM-T"
connector. You can order Icom part number OPC-025A or
OPC-025D from any of the major ham equipment retailers
for a pre-wired cable.

Long Answer

Icom's cable compatibility chart lists the OPC-025A.
Most retailers sell the OPC-025D. Both apparently work.
The OPC-025A is rated for 20 amps, while the OPC-025D is
rated for 30 amps. Most hams prefer the beefier cables.

BUX CommCo sells equivalent cables/connectors that are
cheaper. You can find more info at:

http://www.buxcommco.com/

Rather than finding another Icom connector, many
folks put inexpensive connectors on the cables of
all their rigs and power sources. That way they can
use any rig with any supply no matter what brand.
Particularly handy for switching between mobile rigs.
Even Radio Shack has these, cheap.

One very popular connector is the Anderson PowerPole.

http://www.andersonpower.com/

which is readily available from either

http://www.dcpwr.com

http://www.powerwerx.com/

In fact, the PowerWerx folks have pre-wired, PowerPole to OEM-T cables ranging from 1 to 10 feet long that are much cheaper than the Icom part (less than half the cost). You can always just snip off the PowerPole connector if you don't want it.

Many clubs and organizations have been standardizing on the PowerPole connectors for their high amperage 12VDC power. This makes all of their equipment inter-compatible and interchangeable; a real plus in an emergency. There's a good article on that subject at:

http://www.dcpwr.com/standard.html

Q:7.13 Where can I get replacement microphone connectors?

You've got plenty of sources:

Radio Shack - P/N 274-025 for the plug.

BUX CommCo at:

http://www.buxcommco.com/

The RF Connection at:

http://www.therfc.com/micconn.htm

Q:7.14 What is "Lo-Fi" SSB operation?
Q:7.15 What is "Hi-Fi" SSB operation?

Trick questions, as they are both the same.

They both refer to attempts to transmit/receive higher bandwidth/quality SSB signals. Basically, hams are trying to improve audio fidelity; they are striving for "Hi-Fi" quality. Few (if any) SSB rigs will ever achieve the 20 Khz bandwidth normally associated with "Hi-Fi", thus the "Lo-Fi" pun.

"Hi-Fi SSB" audio is a hot topic within ham radio. Everyone wants the best transmitted audio they can get, however, not everyone agrees upon what "best" is. The issues become even more heated once you add concerns over excessive bandwidth usage and splatter.

The characteristics/capabilities of the IC-746 allow
this FAQ to take a neutral position in the debate.

Stock, the IC-746 has a SSB bandwidth of about 2.4 Khz.
That bandwidth can be widened to as much as 3.4 Khz
without deleterious effects (the FAQ describes how
elsewhere). Pushing beyond that point requires more
effort than most people are willing to invest.

A lot of "Hi-Fi" activity occurs on or about 14.178 Mhz.

Q:7.16 How does one improve the fidelity of a received signal?

Here is a checklist of several possible actions
(not in any particular order).

* Assure precise tuning

* Use a high quality external speaker or headphones

* Try to run without pre-amps or with attenuator

* Reduce the RF gain (increase AF gain to compensate)

* Set TPBT to widest bandwidth

* Use wider IF filters

* Lower level of NR (counterclockwise - to the left)

* Turn off NR

* Turn off ANF

* Turn off NB

* Set AGC to SLOW

* Be sure input power is greater than or equal to 13.5 Vdc

* Use an external AF amp via the ACC ports.

* Equalize the AF output.

Q:7.17 How does one improve transmission fidelity?

Here is a checklist of several possible actions
(not in any particular order).

* Using TCN, set the "SSB TX Tone" control to H.

* Turn off COMP.

* Use a higher quality microphone.

* Use microphone shock mountings and pop filters.

* Use external microphone equalization.

* Feed transmission audio directly via the ACC port,
bypassing the microphone preamp.

* Lower RF output

* Adjust above monitoring signal on a second receiver.

Q:7.18 Can the IC-746 transmit at less than 5 watts?

Yes, with the help of some external circuitry.

The IC-746 isn't really designed for QRP operation
(the 2+ amp draw on receive should prove that).
The front panel control will only get you down to
about 4-5 watts. However, you can apply a voltage
to the external ALC input to get even lower. 0 to
-4Vdc input yields 0 to 100 Watts output. One ham
even uses a simple voltage divider/pot arrangement
powered by 2 AA batteries.

K5UHF warns that there can be a minute moment of higher
power output before the external ALC level kicks in.
Not normally a problem unless you're driving input
sensitive equipment; like transverters.

Q:7.19 How do I turn on both HF pre-amps at the same time?

You can't. Nor would you really want to.

HF preamp 1 is transistor based and yields about 10db
gain for the 1.8 - 54 Mhz range (160m to 6m bands).
HF preamp 2 is IC based (presumably an op-amp) and
yields about 16db gain for the 21 - 60 Mhz range (15m
thru 6m bands.

In practice, each HF preamp will work on any HF band.

The sensitivity of the IC-746 is so high that neither
of the HF preamps are rarely needed. You'll need the
attenuator more often than the preamps.

Q:7.20 How do I adjust the 746 for best AM performance?

The 746 performs well on AM for general communications.
However, many operators choose (and fall in love with) AM
for the sound. For this, the 746 can fall a little short
of expectations.

Start by improving your audio fidelity as described
elsewhere in the FAQ. Then, WU1T (Damon) suggests that
the trick is to back off the carrier level. You don't
want to run full carrier or full mic gain. He also
suggests turning compression off when using AM.

For general guidelines on setting up modern transceivers
for AM use, check out:

http://www.thebizlink.com/am/tech/htm/plastic.htm

Q:7.21 Is the IC-746 suitable for CAP and MARS operation?

For CAP (Civil Air Patrol) use, the IC-746 is compliant
only for HF, and then only if it has the CR-282 TXCO
option installed. Its not compliant on VHF at all.
See the following for more details:

http://www.ntc.cap.gov/comm/equipment/hf_equipment.cfm
http://www.ntc.cap.gov/comm/equipment/Lists.cfm

There's more information on this general topic at:

http://www.ntia.doc.gov/osmhome/redbook/redbook.html

While I don't have a link for it at the moment, I've
been told that MARS (Military Affiliated Radio Service)
must adhere to the same standards.

For both CAP and MARS, some grand fathering did occur,
however, that should have expired by now.

==========

Manual Errata

P:2 (12) AF CONTROL references p.12, should be p.11

P:6 External speaker and remote interface jacks are swapped.

Page 6 has the external speaker and computer remote
connectors mislabeled (reversed). Looking at the rear
of the rig, the REMOTE jack is on the left and the
SPEAKER jack is on the right.

Page 68 shows the connections properly.

P:9 Incorrect page references in MENU descriptions at
the bottom of the page.

(4) TCN p.20 should be p.19
(7) KEY p.24 should be p.23
(8) RTY p.30 should be p.29
(9) TON p.35 should be p.34
(10) TSQ p.33 should be p.32

P:15 BAND EDGE BEEPS simply do not work as expected.

This is more a failing of the radio itself than it is an error in the manual. For more info, refer to the rest of the FAQ.

P:19 SSB TX Tone affects more than SSB

The "SSB TX Tone" setting affects the tonal quality of AM and FM transmissions as well as SSB.

P:22 TRANSMIT button does not transmit on CW

This is more of a clarification than an error. In every other mode (AM, SSB, FM, RTTY), the TRANSMIT button actually "keys" the 746 to transmit a signal. In CW mode, you have to activate the keyer as well.

Most operators use QSK when operating CW, which makes the TRANSMIT button superfluous.

P:27 Only one bar for CW sidetone level, not two

In the CW -> KEY -> SET menu, there are 2 options that control the CW sidetone: options 1 and 2. Option 1 sets the sidetone level via the displayed bar. However, option 2 is only an ON/OFF setting; there is no level bar (contrary to what the manual shows).

P:32 No ALC adjustment for FM

In "FM Operation", under TRANSMITTING, section 5 it states: Push TRANSMIT...and adjust the MIC GAIN so that the ALC level in the ALC meter stays in the ALC zone when speaking into the microphone.

The ALC meter is maxed out on any setting of the mike gain and has no meaning or effect under FM.

ALC adjustments made in SSB carry over modes. Once you get the audio drive level adjusted for proper SSB

modulation, then the audio drive level ends up being
right for all the other modes as well.

P:33 Incorrect filter diagram

The diagram at the top of the page is incorrect. It
shows only one stock filter (2.4 Khz wide) at the
9Mhz IF. There is a second, 15Khz wide, filter at that
point instead of the direct "through" connection shown.

P:42 reference for Noise reduction p.39, should be p.40

42 15Khz filter at 9Mhz IF

P:46 No ALC adjustment for either AM

In the "Speech compressor" section, the ALC meter
doesn't appear to work on AM.

ALC adjustments made in SSB carry over modes. Once you
get the audio drive level adjusted for proper SSB
modulation, then the audio drive level ends up being
right for all the other modes as well.

P:46 Speech compressor

The "Speech compressor" instructions fail to make clear
the fact that both the MIC GAIN and COMP GAIN controls
will have to be adjusted for proper operation.

P:56 Enter numbers via keypad, not tuning dial

While the diagram specifically highlights the numeric
keypad on the radio; the instructions fail to mention
that numbers are entered via the keypad instead of the
tuning knob.

P:56 in 1st paragraph, the reference "for programming scan edges"
is p.56 but should be p.52.

P:68 The box describing the ALC JACK lists an input voltage
of "0-4 V". It should read "-4 to 0 Vdc".

P:70 In the box labeled "ANTENNA SWR" the manual states (in part):

When the SWR is higher than approx. 2.0:1,
the transceiver's power drops to protect
the final transistors.

Actually, power starts cutting back much earlier than that;
somewhere between 1.7:1 and 1.3:1

P:77 The UT-102 Voice Synthesizer is installed in the
"bottom" of the transceiver, not the "top". Also,
the "shield cover" is not involved.

P:79 The "NOTE" for "CONNECTING A NON-ICOM AMPLIFIER",
should read

NOTE: The specifications for the SEND relay are
12 V DC at 20 ma (milli-amps). If this
level is exceeded, an external relay or
switching transistor must be used.

The 746 SEND line is designed to interface to a
solid-state amplifier trigger, like those used in Icom's
power amps. Many people have damaged their rigs by
trying to switch amplifiers with higher voltage/current
requirements.

Contributors + Acknowledgements

There are two kinds of contributors to this FAQ: direct
and indirect.

Direct contributors have written entire passages that
have been incorporated nearly verbatim. Often, they are
specifically authoring something with the FAQ in mind.
Also, they are individuals who have been recruited to
review specific sections prior to distribution.

Indirect contributors have had their comments and input
collected and assimilated from public correspondence
on discussion and news groups, often without their
knowledge. They were simply answering questions,
offering advice, or otherwise just helping people out.

The coordinator has not tried to keep a record of who has
contributed what; the book-keeping would be horrendous.
All sources of information have been INVALUABLE and
are APPRECIATED. Listing contributors here is a
small token of thanks for their neighborly spirit and
generosity. The Coordinator apologies if anyone has
been missed.

11.05.2001 Added M/E P:77 - UT-102 installation
11.05.2001 Added section for Manual Errata
11.03.2001 More info on IC-746 net and daylight savings time
11.02.2001 More info on MARS mod by Icom
11.01.2001 Added Q/A about microphone pin-outs
11.01.2001 Separated Q/A on "mods" into three Q/A
11.01.2001 More "mods" information
11.01.2001 Updated info on DTMF microphones

10.30.2001 Added Q/A about low power 2m operation
10.30.2001 Updated info on power output vs. input voltage
10.30.2001 Added Q/A on IC-746s
10.24.2001 Added Q/A on multiple keyers
10.24.2001 Started a small glossary
10.23.2001 Clarified Q/A about Heil mic adjustments
10.23.2001 Added Q/A about dynamic microphones
10.22.2001 Updated info on different versions
10.21.2001 Added info on ACC pin-outs
10.20.2001 Added info on Sunday evening 20m IC-746 net
10.19.2001 Updated info on "mods"
10.18.2001 Added Q/A on transmitting less than 5 watts.
10.18.2001 Added Q/A on internal ATU while receiving
10.17.2001 Added Q/A on finding Mic connectors
10.16.2001 Added another mirror site at qth.net
10.15.2001 Changed all newsgroup references into links
10.15.2001 Added Q/A on where to buy/sell a used IC-746.
10.14.2001 Added Q/A on other Icom rigs (756, 765, 735, etc...)
10.12.2001 More info on internal/external ATU interactions
10.09.2001 Updated info on internal/external ATU interactions
10.05.2001 Added Q/A on computer interfacing
10.01.2001 Added Q/A on "birdies".

09.21.2001 Added info about QTH.NET's ICOM e-mail list
09.21.2001 Updated Q/A on IC-7400
09.06.2001 Added Q/A about "beverage" antennas
09.05.2001 Fixed numerous spelling errors
09.01.2001 Updated Q/A on ATU to reflect recently reported damage
09.01.2001 Added Q/A about IC-7400 (IC-746-MKII?)

08.28.2001 Updated info buying a 746
08.14.2001 Updated info on accessing the FAQ
08.07.2001 Updated Q/A on ATU range
08.07.2001 Updated Q/A on ATU tricks (band sweeping)

08.07.2001 Added Q/A about reset to factory defaults

07.25.2001 Added Q/A on VOX and ACC-1
07.20.2001 Reorganized into sections with contents
07.19.2001 Added Q/A on Receive fidelity
07.18.2001 Updated info on different versions of IC-746
07.09.2001 Updated info on computer control

06.30.2001 Updated many Q/A on IF filters
06.28.2001 Added Q/A on ACC DIN connectors
06.27.2001 Changed Q/A to ATU tips (high power)
06.26.2001 Added several Q/A on band edge beeps
06.26.2001 Added many Q/A on IF filters
06.22.2001 More info on computer control software
06.12.2001 Added disclaimer & copyright notice
06.12.2001 More information on power supplies
06.12.2001 Added Q/A on ATU at QRP power
06.12.2001 Added Q/A about low output power

05.30.2001 Added Q/A about Heil microphones
05.30.2001 Added Q/A on wiring up keys/keyers
05.29.2001 More information on power supplies
05.28.2001 Added multiple Q/A on computer control
05.27.2001 Added Q/A about different versions of IC-746
05.25.2001 More information on power supplies
05.24.2001 Added Q/A about DTMF tones
05.23.2001 Added Q/A about numeric programming
05.22.2001 Added Q/A about antennas
05.21.2001 Added Q/A about electronic manuals

Hi Charles,

I find this a curious form of touting advances in e-anything only to
reveal the ignorance of e-security. In other words, if it is such a
good idea, why wasn't it fully thought through?

The issue of faking anything is resolved through electronic
signatures, not photocopies of licenses. Honesty and integrity need
not be tested when solutions are available to answer that now.

The ARRL is hardly the bastion of new concepts. It is obvious that if
they were, they would be the repository for Digital Certificates in
this matter and others. Instead of being ahead of the curve, they
fall far behind the electronic signature bill signed by Clinton (this
serves to illustrate the severe time lag - nigh on to two years).
Unfortunately this also illustrates the gerontocracy that seems to
have ossified the organization.

Just getting back on the bands after several years of not being too active.
I have a Clipperton -L with amp supply tuned input built into it.
Was wondering if anyone has mods for it for 17 and 12 meters.
It seens to load ok on 17 but not on 12. Any response much appreciated.

Hello Richard,
How much "security" is really needed for a "hobby awards" program anyway? The eQSL Authenticity Guarantee is quite adequate security for the job of administering "hobby awards"

After all what would - your - damages be if someone cheated their way to DXCC Honor Roll? It sure wouldn't affect my DX credentials..how about yours?

Any and all security measures of any kind can and usually do get reverse-engineered or circumvented in some way. Just look at the software industries decades-long battle with piracy. No more than do they have a new protection scheme than 2 days later the "crack" for it is posted world-wide on the internet.

eQSL security is just right for "hobby awards" and believe me folks...Ham Radio Awards - and - DX are just hobbies....

2208. Amp for FT990: AL-811H or FL-7000?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-14 20:37:46 UTC
From: cprstn54zz@att.net
Message-ID: <3c6c1a0f.71152546@news-server.optonline.net>
Source record: 47413

I can't get my hands on the manual for the Yaesu FL-7000, so I know even less about it than the Ameritron AL-811H, for which I can download the manual.

I thought the FL-7000 (solid state) at around $950 used was a better value than the AL-811H (four tubes) new ($699), but some posters have opined otherwise. Other than having 33% more power, why is the 811H better? Am I mistaken about the facts?

The Yaesu has a built-in ATU; the Ameritron does not. I could not even find an aftermarket megawatt ATU. The cheapest non-automatic megawatt tuner (MFJ-962D) costs $239.

The Yaesu permits full QSK; a $349 accessory (pin diode switch) is needed for full QSK with the Ameritron

The Ameritron needs a $40 control cable; the Yaesu comes with all cables for the FT990.

So, to get the Ameritron where it will perform comparably to the FL-7000, I would need to spend over $1400. I would have 200 extra watts, but no automatic tuning. Why is that a good deal?

2209. Email from ARRL - President about eQSL's

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-14 21:24:12 UTC
From: Charles Johnston <ctj92@cableone.net>
Message-ID: <3c6c2afa$1@news.bnb-lp.com>
Source record: 47414
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.equipment

Hello interested Hams...

I have had some interesting, courteous, and informative emails with the ARRL president Jim Haynie, W5JBP concerning the recent flap about eQSL acceptance for DXCC.

Jim was also nice enough to forward to me in-house ARRL email from Bill Moore to Jim which goes a long way to further explain the likelihood of eqSL cards being accepted for DXCC as eQSL web site now states. Jim has asked me not to include the actual verbatim email from Bill..but has encouraged me to post "just the facts as Bill has laid them out" (Jim's words to me) .... and so to the best of my abilities I'll do that now....if you want to skip ahead I can tell you it still looks like eQSL cards can be and will be accepted by the ARRL as long as some important steps are taken....

Here are cut and paste excerpts from Bill's email to Jim....
---
1. It seems people have not read the entire message, especially the part that says "acting as QSL manager". On his site I see where he has OK for sending e-QSLs, not paper QSLs.In
order for us to accept anything from him we would need a letter from each
station he "manages" authorizing this

2. Then, we'd need something better than his word that he is verifying logs each time a request comes in (something we do not think he will be willing to do with all the stations he has logs
for).

3. The requesting station must send information listing the specific QSL information then the
manager must check the log for it. I believe the term for not doing this is
pre-emptive QSLing.

4. As I have mentioned to all who have written, that ARRL has not changed its
policy in any way regarding electronic QSLs.

---
end of cut and paste.....

I bought a Heathkit IG-5282 Audio Generator, but the schematic is missing from the manual. Does anyone here have one that would be willing to copy for me? Don't need a hard copy. A scanned JPG or PDF file would be great. Will reimburse for any copy and postage cost.

GE MPA VHF Aegis encrypted model. 146 - 174, 160 channels encrypted and 192 clear. I have been using this as my personal radio until I picked up a VX5 and the size and weight difference are big so out with old and in with the new. Great radio with full system keypad for DTMF and so many options you can't believe it.
With good battery, Rapid charger, and belt clip. $325.00
GE MPD UHF standard model 48 channel alpha-numeric display. Nice with little wear. Good battery. $100.00
GE MPD Scan UHF This is a 4 button scan model in good shape with a new battery and rapid charger. 48 channel alphanumeric display, 440 - 460. $125.00
GE MPS VHF 10 channel Like new with new battery, new antenna, and charger. $55.00
GE MPS VHF 12 channel Set of 4 that talk to each other and all have new batteries and antennas. All in a rapid rack charger. $200.00
GE PCS VHF 136.-150. 2 channel. I have this on ham frequencies now with battery and rapid charger. $55.00
GE PCS UHF 440 - 470. 8 channel, This is working on the ham bands now with battery and rapid charger. $75.00
GE Monogram UHF portables 3 with 1 dual slot charger. 10 channel $225.00 for all 3.
GE phoenix sx VHF 16 channel priority scan. With all accessories including a power plug. Tested working. $75.00
Midland 70-336B VHF 8 channel 35 watt mobiles with mics. I have 3 of these. $75.00 each
Marconi UHF portable 16 channel scan made by midland $75.00
Mastr II UHF 75 watt mobile, Painted handle. $75.00 last one
Mastr II Control cable, 8 channel. $8.00 each less the more you want.
Mastr II control head. for mobile repeater operation. $5.00 each.
Mastr II mic. $5.00 each less the more you take.
Mastr II tone boards. These boards will hold 8 different tones or 1 for each channel in the radio. $5.00 each
Mastr Exec II VHF 75 watt mobile. With all accessories. $60.00
Mastr Exec II Mobile extender VHF for UHF Mastr II $20.00 each. I have a large number of these so make an offer on 10 or 20.
Mastr Exec II Mobile extender VHF for UHF Ranger (Ericsson marked) $55.00
Mobile Repeater cable for Mastr II $10.00 each.
Mobile Repeater cable for Delta or Ranger. $30.00 each This would be a good start for a delta programming cable.
GE Voter in special rack with 9 rec. cards and test cable. $300.00
GE MPA, MPD Public safety Mics. $35.00 each
GE PCS Universal Rapid chargers. $35.00 each
GE MPA Standard chargers. $20.00
GE MPA Rapid chargers. $30.00

GE MPI chargers with wall transformer. $8.00 each
GE MPI Rack chargers. 8 position $25.00 each
GE MPI Mobile battery charger. Only one I have seen. For 2 watt battery. $20.00
GE white Versatones 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5. $4.00 each I have a large amount of 203.5, 186.2, 179.9, 173.8, and 162.2. If you buy 10 Versatones $3.00 each. Buy 15 Versatones $2.50 each. Take 50 $1.50 each.
GE Mastr II Icoms EC $5.00 each, 5C $10.00 each I have 2 sets of EC/5C UHF Icoms. Sold out of 2C Icoms. I try to get more 2C if I can locate them.
GE Delta down loading cables. Will work with S825 heads. $40.00
GE Delta mounting plates. $10.00 each
GE Ranger mounting plate $15.00
GE s-550 and s-500 mounting brackets. $5.00 each
GE Battery discharge analyzer. Another rare GE item. This uses the body of an
MPD to hold the battery. The channel display has a red LED rate readout. Unit
attaches to a rapid rack charger with a db15 connection. Analyzer has a big heat sink on the back for heat dissipation. $45.00 each. I have 2 of these.
GE little seen shoulder strap for any GE radio with rear accessory point (where the belt clip is attached) Leather strap like new. $15.00
GE Belt clips $10.00 each
Motorola S1350C wattmeter with 10 watt 500-1000 MHz element. $75.00
Motorola GP300 VHF 2 channel with charger and OK battery. $165.00
Motorola Saber Speaker Mic. $35.00
MRC 100 repeater controller. Rack mount with manuals. $125.00
GE VHF Ranger 19C852150P4 110 watt. With cable, Base plate, Mic, 825 scan head, and speaker. 228 channels with Alpha-numeric display Ready to program and install. $275.00
Motorola Mitrek VHF high drawer only with 1 set elements.110 watt, $40.00
Motorola UHF converta-com Amp. 2 watts in 40 watts out. $50.00
Motorola adapter for 1801 suitcase programmer. Fits MX radio A & B proms. $175.00
Assorted GE portables. PE' MPR, MPI, have several in unknown condition. Sold for parts only $5.00 each
EF Johnson 242-8600 800 MHz with desk mic. $25.00
Maxon Rack charger for the 0520/0510 radio. I think the SP2550 will work, Rapid $35.00
Voter from IMTS phone system. I do not know much about this one. $40.00
Antenna Specialists glass mount UHF antenna. New in the package but package is a little worn due to the Hamfests it has traveled to. $22.00
Antenna Specialists glass mount 220 MHz antenna. New in the package but also worn due to me packing it around to Hamfests. $22.00

Want list not FS
Programming cable for Johnson Scorpion portable. Extra Data module for GE suitcase programmer. Any cables that go to the TQ 2310. Dual band Ham mobiles. UHF mobiles that will go in the ham band. Original IC706
Terms
All prices are plus shipping from 40201. All Items are used unless noted and

only have a no DOA warranty. I take cash, USPS Money Orders, and Paypal.
E-mail for any questions.

Source record: 47436

Hi all. Due to the deal falling through, and computer problems, I have not been able to re-post this radio. It is a mint Kenwood TH-G71A 2/440 handheld. Comes with the standard accessories, plus the matching leather case, and a MAHA clone quick charger (looks like the C-777 Plus, but with the regular LEDs), and the Programming cable (PG-4) and software. Was purchased at HRO in New Hampshire in June of last year. The extended recieve mod has been done (800 MHz, minus cell). Looking to trade all for VX-5, or Icom W32A, or an HT and scanner. Don't be afraid to offer, I might take you up on it! If you don't have a trade, I will take $225 for the lot. When replying remove "nospam" from my address. Thanks, and 73. Mark W4KSR

hello,

a couple of bites on the last time so i am listing this again.

complete swan 500 station includes:

1) swan 500 (not c or cx) transceiver. 80-10 meters. over 200 watts out on 80 about 80 watts on 10. average is about 120 to 140 watts. very clean. had rubs on the front corner of top cage. all letters and face plate in excellent condition. again, i will not call it "mint" because it is not brand new. all listed equipment is in very good condition.

2) swan 410 external vfo. looks/works great
3) swan model 22b vfo adapter
4) swan model vx-2 vox unit. for break in cw. needs a wiring change inside. simple from what i understand. i never worked cw with this rig so i don't know.
5) sure 444 desk mike with swan logo
6) swan 117xc power supply. two mods: one is a muffing fan wired to jones plug so it comes on with the rig. the fan has "feet" that sit on top of finals to keep everything cool. also, wired for use with dsp unit. this can be removed and no holes have been drilled or anything.
7) swan model wm-3000 2000 watt powered meter. very nice condition
8) model fs-2 field strength meter. even has the original antenna on top, which is rare these days.

this equipment is in service and operational. naturally, due to the age it is offered as is. an on the air trial can be aranged with an interested buyer, conditions permitting. i have pictures available for you to judge for yourself.

i have a deal for a heath hw-9 and need to sell this equipment. price has dropped from $325.00 to $300.00 and i can maybe even help a little on the shipping.

email me and we will work something out.

2234. NEED HELP, external ALC IC-735 (repost)

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-15 15:29:06 UTC
From: Richard J <no.flame@no.spam.se>
Message-ID: <a4j9e8pkv1@news.lth.se>
Source record: 47439

Hi guys, I got zero replies....I just have to re-post, sorry...

here we go:

Hi group - oh ye helpful ones -

I need to know the ALC voltages necessary to bring down the output of the TRANSVERTER jack, in order to drive a transverter with a lot less power than the stated "30mV" - whatever that measure came from (ICOM user manual). I plan to do this thru the ACC 2 jack, pins 2(GND) and 5(-V).

The transverter (RN Electronics, UK, 1990) uses 1 cable for TX and RX, so it all comes down to the transverter jack, no attenuator options possible. No reply from manufacturer of xvtr yet, and I won´t open it without explicit advice from them. It doesn´t help that they changed their line of business, too....

2 questions arise:

a) does ALC limiting affect the transverter output at all, or does it just shut down the output stage of the rig more or less?

b) I *guess* from past experiences that we talk about applying a negative voltage in the order of 0V-- -4V or so. I need to get this verified, and also need some kind of table where ALC voltages and the corresponding power reductions are shown. I need to prepare this ALC supply as best I can without having the rig here, and it has to work at first try (long trip to rig, no tools/components etc on site)

maybe c) I also guess we are talking small voltage increments for drastic changes in output, 0.1V increments or less? Time to chase a 20-turn pot, but what value, and what power source (internal 13.8V may or may not be good candidate, you tell me?)

Anyone with precise knowledge (or any other useful info) abt this issue would be a welcome guest on my screen.

Cheers from Sweden /73 Rick, SM7SCJ, somewhat technically challenged

a Little off topic butI need to say it.....
What's up with all these morons addicted to Enron....er "Paypal"?? I have nothing against people w/paypal per se, but I'm sick of putting "I don't accept Paypal" in an Ebay auction, & then getting these addicted morons trying to make me register with "Paypal" in order to get paid..& then THEY take an attitude!! They were the ones who bid on a no paypal auction, are trying to break the listed terms, & feel "they" are in the right!! It happens often....These people are like the lady in front of you, in the clearly labeled "Express-Cash Only" lane in the supermarket, who the whips out her checkbook when it's her turn & says "Who do I make the check out to?" & then gets mad at the store for pointing to the sign.....

I dunno about them, but I'd rather have the FL-7000. Those things
normally are not too cheap, and 950$ seems like a decent price as far
as I know. I haven't heard of any real problems with the Fl-7000 that
I know of. I don't know why they prefer the AL811, but that wouldn't
be the line I'd be standing in. I'd rather have the FL-7000 any day.
You will be spoiled after you run a fully auto amp for a while. The
power difference is not enough to amount to much, and besides, the
AL-811 is overrated anyway to it duty cycle. They run 811's harder
than I would personally. IE: They use four 811's to get 800w. Myself,
I would only drive four 811's at about 600w. 800w is stretching things
unless you have super cooling and feel lucky. Look at the collins
30L-1 that is four 811's. They only run to about 600w. MK

Welcome to the ever increasing group of people who derive a great deal of pleasure and knowledge from improving things we don't fully understand. They call us "Hams". I wouldn't be surprised if your next tuner was "Homebrew". BTW did you notice the quality or lack of it, of the tuner's internal components? Bet you could do better with some surplus compnents and a big steel chassis.

it's gone up in price by $5.00....heh.

2248. SAT SCORES FROM ARKANSAS

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-16 00:39:18 UTC
From: Bill Andrews <w8akh@earthlink.net>
Message-ID: <3C6DA9CA.5AB58EE7@earthlink.net>
Source record: 47353

The following questions and answers were collected from SAT tests given in Springdale, Arkansas in 2000 to 16 year old students! (Don't laugh too hard - one of these may be the president someday.)

Q: Name the four seasons.
A: Salt, pepper, mustard and vinegar.

Q: Explain one of the processes by which water can be made safe to drink.
A: Flirtation makes water safe to drink because it removes large pollutants like grit, sand, dead sheep and canoeists.

Q: How is dew formed?
A: The sun shines down on the leaves and makes them perspire.

Q: What is a planet?
A: A body of earth surrounded by sky.

Q: What causes the tides in the oceans?
A: The tides are a fight between the Earth and the Moon. All water tends to flow towards the moon, because there is no water on the moon, and nature abhors a vacuum. I forget where the sun joins in this fight.

Q: In a democratic society, how important are elections?
A: Very important. Sex can only happen when a male gets an election.

Q: What are steroids?
A: Things for keeping carpets still on the stairs.

Q: What happens to your body as you age?
A: When you get old, so do your bowels and you get intercontinental.

Q: What happens to a boy when he reaches puberty?
A: He says good-bye to his boyhood and looks forward to his adultery.

Q; Name a major disease associated with
cigarettes.
A: Premature death.

Q: How can you delay milk turning sour?
A: Keep it in the cow.

Q: How are the main parts of the body
categorized? (E.g., abdomen.)
A: The body is consisted into three parts - the
brainium, the borax and the abdominal cavity.
The branium contains the brain, the borax
contains the heart and lungs, and the abdominal
cavity contains the five bowels, A,E,I,O and U.

Q: What is the Fibula?
A: A small lie.

Q: What does "varicose" mean?
A: Nearby.

Q: What is the most common form of birth control?
A: Most people prevent contraception by wearing a
condominium.

Q: Give the meaning of the term "Caesarean
Section."
A: The caesarean section is a district in Rome.

Q: What is a seizure?
A: A Roman emperor.

Q: What is a terminal illness?
A: When you are sick at the airport

Q: Give an example of a fungus. What is a
characteristic feature?
A: Mushrooms. They always grow in damp places
and so they look like umbrellas.

Q: What does the word "benign" mean?
A: Benign is what you will be after you be eight.

Q: What is a turbine?
A: Something an Arab wears on his head.

Q: What is a Hindu?
A: It lays eggs.

2252. Philmore FS45 SWR Meter - Ebay

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-16 01:46:19 UTC
From: Dan Long <w4tq@mindspring.com>
Message-ID: <a4kdth$7mk$1@slb6.atl.mindspring.net>
Source record: 47360

Philmore FS45 SWR Meter - Ebay

This is a very nice SWR Meter that is rated for up to 1000 watts, and is intended for the HF frequencies. This includes the 1.8 - 30 mhz Ham bands (160 - 10 meters), and the CB frequencies. It is rated for 52 ohms (this is the typical impedance for ham radio coax cable, but may not be suitable for your CB rig, be sure to check your manual). The meter can also be used as a "field strength meter" (thus the small antenna). The original instruction sheet is included.

If you want a good basic SWR meter, this is it. Very well made. Very clean.

For those who aren't familiar, this meter checks antenna operation by measuring the ratio of reflected power to forward power. If the ratio is high, it indicates that the antenna is not correctly matched to the feedline or to the transmitter. The meter will also show a high ratio if there is a bad connection.

For auction on Ebay, click on:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1332201783

I will be glad to provide additional information. Contact me at w4tq@mindspring.com

I don't suppose it's worth pointing out that the SAT is a multiple
choice test on which the student can only answer by marking an answer
sheet in one of five spaces "A" thru "E", is it ?

2259. VX-1R questions

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-16 02:16:28 UTC
From: "Barry A. Watzman" <Watzman@neo.rr.com>
Message-ID: <3C6DC00C.1C1C93B6@neo.rr.com>
Source record: 47364

I won a Yaesu VX-1R at a hamfest and I'm trying to deceide what to do with it, e.g. keep it or sell it (e-bay).

Any thoughts ? How well is this unit though of ?

[I'm an EE and have had an Advanced class license for nearly 40 years, but I am inactive and have not been on the air in about 30 years, give or take, with one or two exceptions].

I've plugged it in only to charge the battery, and it's now making a "clicking" or "ticking" sound, about once every 10 seconds (it's turned off, to charge the battery, the clicking sound is a "tick" coming from the speaker, it's very soft but not inaudible]. It wasn't doing this for the 1st half hour or so that it was plugged in. Is this a sign that it's charged fully ? I turned it on and it superficially seems to work, but I didn't do much with it, and didn't try to transmit at all (the antenna is not connected at the moment, and I know I could damage it by transmitting with no load]. I'm keeping it in "new" condition for now in the event I do choose to sell it. I was AMAZED at how small it is.

If I do keep it, I plan to do the mods to "open it up". I'm not sure what firmware version I have, but I think it's the latest (holding down the AR button during power on and then pressing the button doesn't ever produce a meaningful display, although it does cycle through a number of displays that do not appear to be meaningful).

I'm looking for a Yaesu FTV-901 transverter or others.

What do you have ??

Makes the FRG-100 receiver capable to receive narrow FM mode
(10 meter repeaters).

2267. IC-2SAT Unlocked in 2m Band

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-16 05:01:05 UTC
From: Al Waschka <awaschka@worldnet.att.net>
Message-ID: <3C6DE5CE.90DBD408@worldnet.att.net>
Source record: 47372

I have acquired an IC-2SAT that has apparently been modified to transmit outside the ham band. The bad news is it won't transmit in the band. It will transmit from about 149 on up to 160 but won't transmit at 145. The problem is the PLL is unlocked.

A diode pack has been installed in the empty location near the resistors to the right of the processor and the next diode pack over appears to have been changed, along with the one above the one that is originally blank.

Could be a programming problem or an an alignment problem. Anybody got any ideas or a service manual they'd be willing to copy the VCO alignment procedure?

TIA

Al K5TAN

I've used a VX-1R for a year now, finding the 650-1600 AM broadcast band weak given the antenna, but otherwise can offer little criticism of this radio.

I use it mostly in the backcountry, backpacking/skiing/climbing where it has replaced heavier HT's carried over the two decades. The weight is great and the battery pack long-lasting.

Licensed for 37 years, I use HR now as a first-aid kit mostly. Still, folks I find on mountain-top repeaters remind me of those once found on HF sideband; a helpful, polite group of operators.

Thanks to everyone who either replied to my request via the news group
or directly to my email address. Quite a lot of interesting fact and
comment. As I mentioned in my first post, I intend to create a web
site for the receiver and will include downloads section for the
manual and data sheets that have been passed to me.

I would be very interested in any pictures that people have of the R1475 actually in use in a service with the British RAF or the Canadian Air Force.

Any anecdotes also gratefully received.

Many thanks

Steve

Friends,
I am running a pair of Alinco DJ596 with Digital Voice board installed. It is just for a test and my first test with digital voice in ham radio. It seems that the ITU V 32 digital communication is this time not permitted in my country. I am looking for otehr ham`s also using the digital voice to share the results.... because I am not so happy with the quality of voice. Problem is that the man do not mention the digital voice with one word.
Greetings and please response also as private mail

Dear Group

I have just purchased a Kenwood TS450S at a rally, but am very disappointed with the receiver performance - I think my FT102 performs better!

I see from the ARRL web-site that there was a QST article some time ago (back in 1994 I think) that dealt with improving the rig's RX performance. If anybody has a copy of this that they can send to me, I will be really grateful.

Hoping that someone out there can help me.

John, G4GOY

Well, it's no so much what it was used for, but who you are dealing
with. You can never fully protect yourself when dealing with
dishonest people, so I just won't even get started if anything puts me
off. It's not that the amp was necessarily abused when it was pumping
600 watts PEP on 26.965 MHz. Rather, it is can you trust somone who
would do that not to knowingly sell you a product with serious
defects?

So what I am asking is whether the group has experience with such
folks and would they be more/less/same likely than a ham to sell a
known problem?

My Biggest question would be, why is it being sold.
I've known many 'Cb'ers' who were very knowledgable about RF, design, and
operation. I've also known just as many who would 'tinker' with something
til it broke, then sell it as Ok.
Myself, I wouldnt buy it until it was seen in operation..(on a legal
frequency of course ;)

No,

Assuming that the seller had been burned when he bought it,
burned it up worse by hooking it up wrong, and that even it
might have a couple of good parts left, the ones you needed
would have been the first burned up.

Now if you're the type to fish through the ashtrays for butts...

Can an "unlocked" VX-1R transmit on the aircraft band ? I'm seeing conflicting information on this. If it can [at all], is transmission AM or FM ? [The aircraft band is AM] ? In addition to my ham license I have a pilot's license, it would be useful to know if it could be used as an emergency aircraft transceiver.

2298. HF Coax Length ??

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-16 22:31:32 UTC
From: James Nipper <jnipper@nospam.fdn.com>
Message-ID: <v5Bb8.57$Ho1.629@news1.fdn.com>
Source record: 47252

I am installing a new Gap vertical antenna, covering 80m through 10m. The actual amount of coax that I need is 60 feet. Somewhere way back in my mind, it seems that I remember that it was best to have a minimum of a "certain" length for the feedline coax. Perhaps this minimum was at least a quarter wavelength on the lowest band of operation ?? If this is the so-called rule, then my 60 feet might be just right, huh ?? I know this had to do with the SWR on the feedline and perhaps the effort was to make the feedline a 1/4 wavelength for lowest band, and greatest efficiency to the antenna ??

I know this sounds very basic, but I have forgotten a lot of the little that I know. hee hee heee

Any helpful tips and comments would be appreciated.

Ok, I might buy one of those from time to time. If I saw an amp, amd
it looked and operated well, I don't care who owns it as long as it's
not stolen. Not all cb'ers are braindead. And it's not illegal for
them to own gear, only use it. I bought my TS-830 from a CB'er I've
known for years and it was in near mint shape. He got it in a trade.
Actually, he was a no -code tech, but he talked on 11m also and had
for years. It also had scratched into the back plate of the rig a call
from a previous owner, another no-code in OK that didn't have the
ticket to even use an 830."no-code also" I have no idea what he used
it for. It's not been modded for 11m though, I know that. The radio
had made a few rounds on the hamfest circuit as trade bait before I
got it. But I could care less who had it before me...It's a mighty
fine radio that is finally being put to proper use. I ended up adding
a VFO-230 to it. It's a nice looking and working set. My henry amp was
once owned by a crazy Cb'er down about 200 miles south of here. It was
then bought by a friend of mine who rebuilt it. He went SK a few years
ago, and I bought it from his estate. It was like brand new nearly.
New roller coil and the works...The CB'er didn't do anything to it
that wasn't able to be fixed. MK

2300. Source For Schurr Paddle Needed

Hi:

Are you tried of the corrupted code plugs from CHEAP Cables, Nip-Clips, solder on cables and the $240.00 Motorola Price?

This is not your Atypical Program Cable for the Saber Series !

This is one of the BEST well made Clone I have seen. Only a few are left.

Unlike some clone which use cheap cable, these are made of super flexable Type CL2 75c 28awg (UL Approved) AWM Style cable. This is Double-Shilded Cable.

In addition, if you view the 2cd photo, you will see EACH wire has been well routed, and has shrink tube on each pin to insure against any shorts.

Also, each side of the connector has Heavy Duty Cable support to prevent wire breakage which could lead to a code plug failure.

All cables have been TESTED to insure they will not cause a code plug corruption when programming.

Photo of the complete cable can be seen @ http://www2.4dcomm.com/metrotech/sab_cv1.jpg

Photo of the connector inside @ http://www2.4dcomm.com/metrotech/sab_cv2.jpg

$85.00ea+$8.00 for Pirority Mail S & H

Terms:

PayPal Now Accepted !!

Acceptable PrePayment in the form of a Postal Money Order, PayPal (If immediate shipping is desired) or a Personal / Business check is A-OK too if you do not mind a Short Shipping Delay due to bank processing time. This is required only the first time or two as once you are in the data base, PrePayment is no longer required

Plse, SW is availible "Only" through Motorola C & E, so if you need SW, it is highly recommended that you contact them and get the proper SW and Support materials.....It's Cheap compared to a radio failure.

A sensible attitude. But for a long term installation I always add a few more inches in case it should be necessary to replace defective plugs/sockets.

That is correct. The other concept is a myth that has been around for a long time.

If the load is not the same as the impedance of the line, it will just spin you around the Smith chart with a gradual spiral toward Zo as the attenuation of the feedline increases with length.

You probably want enough feedline to place the operating position sufficiently distant from
the antenna, especially if you are running significant levels of power.

If you are too close you should consider buying the Wave Scrambler as seen on TV.....

Clear DayI have some Equipment I want to sell to clear the shack. Look at qrz.com callsign GW4OFQ and you can see I need to clear most of it as I use the FT-1000MP and the Alpha 99 most of the time and for QRP I use the Wireless Set 62.
For Sale are the following:

Wireless Set 19 MKIII fully working with all the bits.
National HRO date 1944 working very clean inside with powersupply & Coils
R 1155 working but needs 240v DC powersupply
R 1155 has internal powersupply but not sure if its working got it for spares
Wireless Set No 62 Working great had a few qso's on this set has original headset/mike. I have the Crystal Calibrator for this set (Very Rare to get one)
Signal Generator CT 420 Military set in very good condition heavy and need porersupply.
Lakspur No 8 RF Tuner
I have a massive amount of spares nearly 100 tubes a lot never used and purchased as spares for the above also Meters, Coils some go back to the 1920's used in crystal sets.
I am open to offers on the above, I have only had the equipment for about 10 months as I was going to start a collection but now need the cash for bills.
I payed over £600+ would sell the lot as one purchase for £400 plus Shipping as the equipment is very heavy.
Hope maybe someone is interested as I am desparate for cash.

Jim I have the GAP Titan on a 15 foot mast. I tried to use the
antenna with a 50' piece of rg-58. No luck - it just wouldn't
resonate. I e-mailed GAP for help and they suggested adding 10
feet to the coax. I had a 10 foot piece lying around so I tried
it. Bingo! The antenna works perfectly now.

I think it is impossible to generalize in a situation like this. Pirates sin. But hams do, too. Nobody's perfect. Look at the damned gear. If it looks okay, buy it; if not, don't. Or if you feel uneasy about the whole thing, seek out a ham or ham store that has amps for sale.

Or, ask him if he will take a post-dated check so you can check out the amp, first. If he won't do that, you might look elsewhere.

2337. Desperately need help wth Icom IC-T21A radio... :~(

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-17 17:12:51 UTC
From: Bobby <elgar@mindless.com>
Message-ID: <a4oo51$1o9to$1@ID-45932.news.dfncis.de>
Source record: 47292

Hello folks,

I bought a cheap 2nd (3rd?) hand IC-T21CP dualband 2M transceiver today, probably a variant of IC-T21A. It was bought from an auction site in Hong Kong (I'm in Hong Kong). It looks exactly like a IC-T21A, and I guess it is operated the same way.

It was cheap so there was no manual. I can't really figure out how to use it. To switch it on to VFO mode I have to power it on using (Function + B + Power) and then key in 0123. Otherwise it'll be a mode with which you can only use stored memory channels. The settings (like saved frequencies) are not really saved and disappear the next time I switch it on. I can't figure out how to scan, what does channels T1-9 do, etc...

I read the whole manual of IC-T22A (from Icom's website) to try to work out how Icom thinks. Despite the model numbers being so similar, it's actually quite a different radio! Can someone help me with the operations of the radio? Better still, can someone pleaseeeeeee send me a copy of the manual? If you do, I'll let the world know of your good deed!

Pleaseeeeee!!!!!

Thank you.
Bobby.

PS I've searched groups.google.com and several just requests were without reply. Please help me! :~(

Source record: 47296

Don't have the colors, but you should be able to figure them out with
the following pin numbers on the 8-pin plug.

1. Microphone
2. 8V
3. Up/Down
4. Squelch
5. Send (PPT)
6. Ground
7. Microphone Ground
8. AF Output

Note that not all radios use all these pins. Can't be more specific
for the IC-2800 as my SM-8 instruction sheet is pretty old.

You may have made the statement below in jest, but I'll bite anyway. No, it doesn't work.
In fact, if you should have a strike, it *could* travel down to that jar causing it to explode,
sending shards of glass everywhere to the grievous injury to whomever happens to be in the
room. It's another CB myth that is much more dangerous!

OK, if you can hook it up and check it out first. I bought my
TS-830/VFO-230 pair from a ham who brought it over to have
it looked at because it was goofed-up on Field Day. I got into it
and found it needed some work, but not much. So I made him a
decent offer and we are both happy. You can thank the SK for
absorbing the loss on your Henry amp for you.

I was merely conscious of the fact that radios found "in-the-wild"
have often been subjected to incredibly horrible experiments.
After years of swap meet and hamfest experiences one develops
certain perceptions along with a thick skin that allows one to
easily avoid the ones that just don't seem right.

:
: Ok, I might buy one of those from time to time. If I saw an amp, amd
: it looked and operated well, I don't care who owns it as long as it's
: not stolen. Not all cb'ers are braindead. And it's not illegal for
: them to own gear, only use it. I bought my TS-830 from a CB'er I've
: known for years and it was in near mint shape. He got it in a trade.
: Actually, he was a no -code tech, but he talked on 11m also and had
: for years. It also had scratched into the back plate of the rig a call
: from a previous owner, another no-code in OK that didn't have the
: ticket to even use an 830."no-code also" I have no idea what he used
: it for. It's not been modded for 11m though, I know that. The radio
: had made a few rounds on the hamfest circuit as trade bait before I
: got it. But I could care less who had it before me...It's a mighty
: fine radio that is finally being put to proper use. I ended up adding
: a VFO-230 to it. It's a nice looking and working set. My henry amp was
: once owned by a crazy Cb'er down about 200 miles south of here. It was
: then bought by a friend of mine who rebuilt it. He went SK a few years
: ago, and I bought it from his estate. It was like brand new nearly.
: New roller coil and the works...The CB'er didn't do anything to it
: that wasn't able to be fixed. MK

2348. ALPHA AMP CASE & FACE ???

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-17 20:06:59 UTC
From: rong@computer.net
Message-ID: <3c700bf1.7812686@news.computer.net>
Source record: 47302

I've recently seen a few ads on Qth.com for Alpha Amps. The sellers say
that the cases & faces have been repainted or restored. Who does this ??? I have
an Alpha 78 that I bought used a number of years ago, and it could use some
"restoring". Years ago, it had a velvety feel to it--now the whole cabinet &
face feel slightly sticky. Neither I nor anyone in my house is a smoker. The amp
is always covered with a plastic "cover-craft" cover--maybe that's the problem.
The finish just deteriorated over the past 10 years or so.

Hello,

I have several of this antique globe shape German triode in stock. It
is directly heated, an European 4-pin base and about 12W anode
dissipation. The valves are NOS, but the boxes are mostly in bad
shape. Pictures are available by e-mail.
Please contact me if you are interested.

Regards,

Arnold Goks yr

2359. Trouble Programming Moto CDM1250

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-17 22:51:56 UTC
From: bcooper_3@excite.com
Message-ID: <guWb8.1399$Re5.268796@nnrp1.ptd.net>
Source record: 47313

I'm having trouble reading a CDM1250 VHF radio. The program reads the radio but then I get the following 2 error messages: "Failed to add 18 records in rdkRecSet_2605_2629" and "Problem in CreateProperNumberOfRecsAtUnpack for block Personality Assignment Block". I can read another CDM1250 without trouble. I'm using version R04.00.00 of Professional Radio CPS -AA. The difference between the 2 radios: the one I can read is UHF with 10 channels in 1 zone and the one I can't read is VHF with 19 channels in 2 zones.
Thanks,
Bob

So now it's come to this. I busted my butt for the Extra and now they've lowered the code requirements on the exams. Now this. Part of the joy of receiving a QSL card is the anticipation, the stamp, the person's style which shows their character, their handwriting, their choice of cards, the nostalgic card companies. The way the card ages and turns yellow. My family members have been licensed since the mid 50's. My father is going to be sick over this. He's a purist and so am I. I don't see this as an issue having to do with what's acceptable to the ARRL; I see it as an issue of preserving tradition and not going the way of computers. This is all we have left that's old fashioned. This breaks my heart!

You have to check them out. I've never bought a used radio mail order
so far.
If I did, it would only be from someone I know well.
In the case of my 830, I know it was never used on the cb bands. I can
tell from the pristine PLL board. Only that it was owned by a no-code
tech at one point. It was so clean, it was obvious it hadn't been
abused. It was about a 9.5 on the looks scale. After a total realign,
it's a 10 on the working scale,except for one bandswitch plastic
coupler has a little play from a slight crack. I just only go
clockwise to keep from goofing it up worse. Going the other way
stresses it on mine with the crack the way it is. Now the henry I
think did have a few problems, but mainly it just didn't work right.
Probably from misuse. But he didn't pay much for it. Maybe 400$ or so.
He went though it and fixed it all back up to factory specs including
the new roller coil, which was hard to turn. He might have even put a
new skirt on it as it looked nearly brand new when I got it. I paid
about 900$ for it, so it's not like I got a steal deal or anything.
But like I said, it was like new nearly and I knew the owner to be a
top notch tech so I coughed it up. Just buying from a ham doesn't mean
the gear is good also. Some abuse the heck out of them. I've seen some
at hamfests that look like a truck had drug them in by a rope. It's
more up to the person and how they take care of things rather than if
they have a ticket or not.

>
> 73 de Ken KG0WX

Thats because they neglect to decouple the antenna with radials, or
whatever.
Most verticals at elevated heights must be dealt with differently than
one mounted on the ground. Only a 1/2 wave can get around this and
properly function as a complete antenna. The gap is not a 1/2 wave. It
needs resonant radials to act as the lower half of the antenna, and
also to decouple the feedline from the antenna. When you neglect this,
your coax becomes part of the antenna. Thats why they are so hinky
about the feedline length. Not a very good design overall... MK

2369. 12 Volt "Power Station" Charging ??

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-18 01:33:32 UTC
From: James Nipper <jnipper@nospam.fdn.com>
Message-ID: <gRYb8.62$Ho1.803@news1.fdn.com>
Source record: 47322

Several years ago, I bought one of those neat portable 12 volt "Power Stations" from Ham Contact, as advertised in CQ magazine.

While I like the design and quality, I have never had what I consider "normal" use of this system. It will lose its charge after just 1-2 hours of on/off talking on a portable 2m rig (five watts), and will lose power even if I power a 2m rig on receive only, for about 8-10 hours. Under these conditions, it should last at least a week for monitoring only.

I recently checked the pin voltage of the ac adaptor/charger that is used to charge the unit, expecting to see about 3 -4 volts dc. But, it shows 15 volts !!

Questions--

1. Shouldn/'t the charging voltage be much lower than 15 volts ??

2. If the charging voltage should be much lower than 15 volts, is this the likely reason why I don't get any more usage out of this unit before I have to recharge it ??

3. Can an ac adaptor just simply go bad, and the voltage rise above its intended voltage ??

I will appreciate any words of wisdom on this please !!!!!!

Just be careful of the shipping costs and sales tax costs Radio Shack will assess on your purchase.

Unlike mail ordering from ham dealers who are outside of your state, RS has retail stores in all 50 states, so you'll be charged your local sales tax rate. At a 7% rate this will add $42 to your final cost.

Their shipping costs are based on the $$ amount of your purchase and NOT on the weight of the parcel, like everyone else charges. I checked this and it adds another $32 to the final price.

The $80 or so that this adds to the seemingly low $599 purchase price gets you up to $673 or so in a hurry. Mail ordering a DX-70TH from an out of state ham dealer will probably end up costing you about $755. Thus, for only $82 more you get a radio that is newer vintage and gets you 100W out on all bands, including 6M.

Kind of makes the T-model from RS look not quite so attractive, doesn't it?

Source record: 47325

James, I'm not sure you have a problem. If your receiver draws 600 mA (and many draw more than that) then 10 hours of operation would require a 6 AH battery. What is the capacity of your power station - it may not be much more than that. You may be expecting too much from your battery.

It is not unusual for a charger for a 12-volt SLA battery to output 15 volts, especially under no load conditions. A charger with a 3-4 volt output could never charge a 12-volt battery.

2373. Re: 12 Volt "Power Station" Charging ??

Source record: 47327

James, what is the capacity of this power station. If you expect it to run your receiver for a week continuous and your receiver draws 600 mA (many draw more than this) then you would need a 100 AH capacity battery. To run it for 10 hours would require a 6 AH capacity which is probably closer to what you have. You may be expecting too much from the battery.

Charging voltage should be around 14-volts for a 12-volt Sealed Lead Acid battery so a 15-volt reading under no load conditions sounds about right for your charger. If it only put out 3-4 volts then it could never charge a 12-volt battery.

I've got a somewhat similar device, and my adaptors voltage is close to 15 vdc without load. Check the voltage charging your car battery, chances are you'll find it close to 15 volts. My little standby device works fine. I believe it's got a 17amp hour battery in it.

The no-load voltage should be slightly higher than the battery's
nominal votlage of 12-13.8V. Seems normal. Has to be slightly higher
to charge the battery.

>
>2. If the charging voltage should be much lower than 15 volts, is this the

>
Most likely, you have not kept it charged. These batteries need to be
stored charged, or they degrade. They lose about 1-2% of their charge
each, IIRC. You need either a trickle charger or a schedule of
recharging.
>
>3. Can an ac adaptor just simply go bad, and the voltage rise above its
>intended voltage ??
>
More likely, in going bad, the output will drop. See above.

If the gel cell inside has degraded, it will need to be replaced, but
not the whole unit.

Rechargable batteries require a bit of fuss to maintain their shelf
life.

If you want the speaker to continue to work, but to be turned off when you plug in the headphones, used the closed circuit type jack, otherwise, if you just want to use the headphone jack only and never use the speaker, use the open circuit.

Be sure that there is no DC going through the speaker. It's unlikely, but not out of the question.

Source record: 47334

To answer your questions ;)

1)
No. The charging voltage to the battery pack will normally be around
13.8-14.2 volts. Lead/acid batteries are actually about 2.3 volts per cell.
Your AC adaptor/charger may well be putting out LESS than the recommended
voltage under load (charging the batteries), and this could cause them not
to charge fully.

2)
See 1) above

3)
If it were a regulated supply, this would be possible. If not, then no. An
unregulated supply will go down in voltage if any fault is present.

Hope this helps you.

Take care, and stay well.

2382. Yaesu 12 auto adaptor VX-5R

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-18 07:54:17 UTC
From: Chug <bluefis@hotmail.com>
Message-ID: <Jq2c8.4567$Ap6.213519@news2.east.cox.net>
Source record: 47336

I'm thinking about buying the Yaesu 12 volt adaptor cable for my VX-5R. But in the true ham spirit, I'm wondering if I can build my own, using just a straight auto cigarette lighter adaptor, wire, and matching dc plug (keeping an eye on polarity of course). The manual states 10-16 volts, operating.

I understand the factory model has a noise filter built in, this is not a factor since it will just be used to charge the HT in a pinch on camping trips. (or is it a simple matter to incorporate a noise filter into the home built design?)

My question is this, is the voltage regulator built into the auto charging plug or the radio? will I fry something if I roll my own or does the Yaesu auto DC cable have some sophisticated "anti radio fry" circuitry built in?

73,

Cross-posted to: rec.radio.amateur.equipment,sfnet.harrastus.radio.ham

Hi there, (OH hams, sorry for cross posting&language)
my old workhorse TS930 S/N 21000055 lost tx power midst a QSO yesterday. A barely
noticeable click sound and power needle stopped moving while everything else was normal,
then the station being worked with came back (CW QSK) saying he lost me.
Running barefoot, with built in ATU. No mods. Suspect the final transistors - please confirm
or contradict the diagnosis!

Have read through numerous news items on TS930S failures - all post SN30xxxxxx.
No idea of what are the differences so not sure what applies and what not.

RX perfectly ok. Meter shows Vc abt 29V and Ic almost zero when transmitting.
Carrier level adjustment does not affect in any way on any mode, speech compressor on SSB
seems to work (at least the compression meter gives indication). No help from bypassing the ATU.
Same symptoms regardless the mode and way of actuating the transmitter through PTT or
key. RX mutes normally. My deduction is that the power supply is OK - wrong?
No deflection on external PWR meter. TX sig S9 +40 with a second receiver (on the same
table) when TX ant (30ft away from the shack) connected to TS930, no sig when no ant connected.
What else should I check?

If it is the final 2xMRF422:
- anything else likely to have failed (such as driver transistors...)?
- where to get a new pair (MRF422 or equal), how much would it cost from your local supplier?
- how great a pain is it to disassemble the final stage (and put back together)?
- what will fail next in this radio, if I were to repair the final stage?

Thanks for reading and for any subsequent help!

Greetings readers.

Just upgraded to my General from Novice. Been out of the hobby for a fair while, but just got back in thanks to a co-worker.

Plannin on buying a new rig (TS2000 *crosses fingers*) soon and had a couple questions:
1) I have a 20 amp power supply... The rigs I'm thinking of buying all want 23 amp supplies. Can I use the 20amp supply? And if so, at what cost? (I would presume it will drive the rig receiving, and just keep me from peak output on xmit).
2) We don't have room in our yard (VT trees and rocks) for a big dipole. Hopfully this spring I'll have time to clear it. In the meantime, I was thinking of running a LONG random wire. However, I'd like to solder it to a piece of coax to feed into the shack (cut down on RF). Anyone have any experience with end-fed, longwires? Any traps to watch out for?

Thanks for any input... I appreciate it.

73,
Brian KA3ZKE

Hi, I have a Kenwood portable TK-280 with Fleetsync and a mobile radio TK-780. I would like to send some data over the air. (The lat/long position that i would get from a GPS) I have no idea how to do that but i've been told it is possible. If you can help me plz leave me a message.

Thank you all in advance.

I assure you I am not trivializing their deaths. I am upset whenever
I hear of decent people losing their lives in an undeserving way.

What I *am* trivializing are the comments about how "hams have died
trying to activate X". The original discussion (a tangent from the
eQSL subject) was whether DXpeditioners lose money due to eQSL's; i.e.
whether they deserve monetary compensation for their efforts. I, for
one, typically send $5 to a DXpedition group when I request a QSL.
I appreciate what they do, and want to help out. That a few DXers
have died on an expedition does not make DXpeditions more noble, nor
does it make them more deserving of cash. It's simply an unfortunate
occurence, like an ice fisherman who falls through the ice or a skier
who hits a tree.

Well, I'm certianly glad I stick the end of my coax into a basin of water when
it storms instead of a glass jar. I'd hate to have that jar explode by my
radio.

> transceiver.

No, it cannot. The aircraft band is AM, and (assuming you could somehow open up the transmitter to that freq range) the transmitter is FM only. I highly doubt you could get it to run AM. BTW, it's illegal, in case that matters.

I have two VX-1R's, and love them - for specific uses. If I'm just listening in on the bands, it's great to have a tiny handheld. With just a half watt, you can't hit many repeaters and you'll be noisy into them unless you're close. Still, there are places where I know I'm close enough. Plus, for short-range simplex on skis, afoot, in canoes etc these rigs are great! Look at all the FRS radios out there now - they are exceedingly popular, but you have just as much power on your VX, yet 100X the frequency space AND you can use hotter antennas and repeaters and amps etc.

Andy,

Seriously,

This very thing happened not far from here a number of years ago resulting
in injury to a number of the CBer's family. There's not much you can do if
lightning takes direct aim at your house, but there are things you can do so
as not to encourage it. In summer, especially, I ground my
antennas to discourage static from building up on the antennas/feedlines. I
don't know what
lightning would do to a basin of water. LOL!

With your antenna, a long random length of wire will work fine - use an autotuner (i.e. the icom smart tuner) which is hooked directly to the length of wire (and also to a ground) - from there you run coax back to the radio. I have used a similar tuner (from Alinco) in a similar situation before and had very good results from it - easy to do, and not to bad on the hip pocket. Just be aware of the directional effects of the antenna (if in a straight line) when running multiples of wavelengths - one way that I have beaten this is by looping the wire around some of the trees forming a bit of a box shape.
If the power supply is a 20A continuous, you will be OK, if it is a 20A peak, you should be OK - just don't drive it flat out, but I personally prefer to run larger power supplies - I have a couple of 30A continuous power supplies (lots of radios).

All the best

Matt

Hi,

I am in need of a piece of advice, so please forgive a lame question, but in amateur radio I am a complete ignorant.

I am a paraglider and I do fly both in Europe and in the USA. I am currently looking to buy a 2m / 70 cm radio which would work both here and there.

I am considering either a 2m radio or a duobander - 2m and 70cm.

What should I look for - what feature or description is responsible for the operation of the radio on both continents?

Maybe there are a couple of specific radios that can do that?

Of course price, size and weight are important factors too...

I would appreciate any piece of advice,

Regards,

Michal

Going to a coax lead in will have little effect at all on rf. All you
are doing is slightly extending the long wire. I don't like end fed
long/random wires myself. Lots of problems, but they can work if you
can get nothing else up. I'd much rather have a center fed antenna of
whatever type. You don't say what bands you want to work. MK

Hi Michal,
If you're not a licensed ham, it's illegal to use ham bands. Do you want two-way communications from the air and landing zone to your tow vehicle/recovery crew? Perhaps you might consider GMRS or some other alternative for comms. As for European regulation, *I'm* completely ignorant:)

This is to anyone with last year's (2001) CQ magazines. I need to ask
you to look something up for me.

If you have the year, please contact me ASAP if you don't mind.
I don't want to buy them - just have you check for some articles,
and maybe fax or mail a copy of certain ones to me.

Thank you if you can help.

I can vouch for the one at this link, built mine, and put the analyzer on
it, great swr across the band and very good performance.
It can be found at :
http://www.n7qvc.com/amateur_radio/copper.html

By the way, it's a dualband too.

I didn't know them, so to be honest they are trivial to me.

To quote KI8AB,
"That a few DXers have died on an expedition does not make DXpeditions
more noble, nor does it make them more deserving of cash. It's simply
an unfortunate occurence, like an ice fisherman who falls through the
ice or a skier who hits a tree."

MFJ makes a cheapo j-pole of twinlead that you could hang by your ht, and then roll up when you go.

If you want a copper tube job, these folks make some nice-looking j-poles:

The website for the Siltronix only makes mention of the conversion and makes a vague reference to an out of print ARRL book from the 80's of a collection of Hint's & Kinks.

If anyone has the info on how to do this conversion it would be greatly appreciated, since 10 is hot now, I would like to put this old rig on the air. Before 10 goes dead for the next 11 years.

Thanks
Ray

Use a 6KD6 and change the plate cap, rebias, re-neutralize.
Check the pinout first I believe its the same.
You will have to go easy on it since the 6KD6 rating is less than an 8950.

>Also need a meter
Ray, I wouldn't invest to much $$ in that set, they are junk and drift worse
than HW-101's
I doubt you will be keeping it if you get it working

I picked this radio up from a friend a while back but it had no manual with it. It works well but I am having problems figuring out all the functions. Most especially the timer. The radio comes on daily at 1pm. I have no idea how to shut it off & it won't shut off on its own. I really need a copy of the manual!

Also, what is the value on this radio? I did some trading with him for this & some other items so I have no clue & neither did he.

If you email a reply that would be most helpful as I don't read this group that often & also my ISP's news sever drops/looses/deletes some messages.

Thanks for any help anyone can give!

I was comparing the MFJ to the j-poles (Portable) and the one on
ilinkradio says its 450 Ohms, what does that mean in terms of
performance characteristics. Anyone using one of these tell me how it
performs and/or which one has a better price/performance ratio OR am I
better off visiting Home Depot with a parts list.

I have for sale one Optoelectronics Xplorer Nearfield Receiver. Unit is in excellent condition and has seen little use. Will include Opto DB32 "stub" antenna. With original box, manual, telescoping whip antenna, PC download cable, software, and AC adapter. This is the newer Xplorer that also decodes LTR trunking ID's. It is cellular blocked. Battery pack is in excellent condition.

Reason for selling: Seeing virtually no use, liquidating for other radio purchases.

Price: $600.00 shipped UPS ground US only.

Payment Method: Pre-pay with U.S. POSTAL SERVICE MONEY ORDER ONLY!!! No substitutions, please!

Upon receipt of US Postal Service money order I will ship unit to you and will contact you with UPS tracking number.

For more information about this device, please check this link:

http://www.optoelectronics.com/xplorer.htm

Please contact me via e-mail if interested.

Thanks for reading.

Greetings,

I have a Realistic PRO-2004 scanner for sale. The following info describes it's condition, modifications, accompanying HB232 Interface, included items, and payment method. Photos of the package are available through the link at the bottom of this message. If you are interested after reading this long-winded message, please contact me at kc1ua@scancapecod.net. Thanks.

Condition
---
1. Case is in good condition. Some minor scratches.
2. Display is in good shape. Not as bright as day #1 but doing well.
3. An analog signal meter has been mounted on the lower left front of the radio. This eliminates the earphone jack.
4. A blue keypad overlay has been placed over the original yellow keypad. This overlay shows a 400 channel plan instead of the 300 on the original yellow.
5. Radio does use a 9 volt battery as memory backup. Care must be taken to replace this battery. I would recommend twice a year.

Modifications
---
1. Full coverage restoration.
2. Removal of power transformer to reduce heat issues, facilitate HB-232 interface components, as well as toggle switches mentioned in #4 mod below.
3. 300 to 400 channel modification.
4. Modification that creates 64 independent "banks" of 400 channels each. Controlled by toggle switches on rear of radio. Diagram for operation is included. It is not possible to scan across these banks, but 64 different configurations are possible.
5. Pushbutton switch on back of radio defeats keypad beep.
6. Discriminator tap (RCA jack).
7. Analog S-Meter mounted on front lower left. Eliminates earphone jack.
8. Radio did have problems with cold solder joints, which is common in this radio. They have been repaired.

HB-232 (a.k.a CE-232) Interface
---
1. Allows for computer control of PRO-2004 through supplied DOS software. Demo of Windows software is available for download from www.steaksandwich.com.

2. HB-232 Interface is mounted in a project box, 8" wide, 6" deep, and 3" high. Short DB25 connection from box to rear of PRO-2004. DB-9 connection from interface box to computer.
3. Supplied software is able to program radio and will display a "virtual" panel that controls radio's functions. Again, it is DOS based software. I would primarily recommend using it for programming/backup of memory banks. Many scripts that can make the HB-232 perform various functions are included.
4. It IS NOT imperative that you use this interface. The radio operates just fine standalone. However, it is included as part of the package for obvious reasons.

Included Items
---
1. Original manual.
2. Service manual.
3. Power supply is NOT included. You will need a 12V positive tip wall wort type supply. I would recommend one that handles about 1 AMP just to be on the safe side. I was powering the radio from a 12V power system in my shack. Transformer was removed as outlined above, so this radio DOES NOT have 120 VAC capability. Radio did not come with a wall wort type supply.
4. HB232 software and scripts burned on CD.
5. My support for your first days of operating this radio! I won't disappear on you.

Payment Method
---
1. $300. Will ship UPS Ground USA only on receipt of US POSTAL MONEY ORDER ONLY!
2. Shipping and insurance included in asking price.
3. I will provide you with a UPS tracking number when the radio is enroute.
4. Reason for selling - I am simply not using this setup any longer. It is sitting here doing nothing.

This is a unique setup. I would not recommend this setup for anyone looking for their first scanner, but the radio works fine as a standalone unit and/or with the HB-232 interface. Please contact me if you have any questions. Photos of the package are available at this link:

http://www.scancapecod.net/2004sale.html

My copy of Operating and Service Manual for HP5245L refers to the timebase oscillator employing *a 1-Mc piezo electric crystal*. There is a x10 multiplier circuit to generate a 10MHz signal for the rear panel *10-Mc out* this 10MHz is also used in the various plug-in units that were available.

For the standard timebase the stability specs are given as:
Aging rate - less than 3 parts in 10^9 per 24 hours.
Short term - less than 2 parts in 10^10 RMS with measurement averaging time of one second under constant environmental and line voltage conditions.

Not bad specs for it's era, I guess.

I don't know how this compares with your version of the 5245.

2438. Need Help with Kenwood TS-430

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-19 03:10:58 UTC
From: Chris Dorn <cdorn@telusplanet.net>
Message-ID: <3C71C2B3.619586A5@telusplanet.net>
Source record: 47241

Hello,

Just picked up a Kenwood TS-430 with the understanding that the RX was ok, but the TX wasn't. Unfortunately, all I get when I power up the radio, is one digit in the 10Hz (far right) position on the display. Rotating the tuning allows the digit to change from 0 to 9, but there doesn't appear to be any RX. Changing to memory mode produces a completely blank display other than the memory number. I tried a CPU reset, and it briefly brought up all 8s across the display, then 14.000MHz, and then back to the one digit. Does anyone have any ideas about what may be happening here?

Thanks,

Chris VE6RDC

Hello,

I have the car adapter for my vx-5r. It appears to be like any other cigarette adapter but with a little loop towards the radio side of the cable. You'd probably be good to go with a generic adapter. I'll have to ohm it out tomorrow to verify though.

My 2 Cents,

Crossband repeater isn't really practical on a repeater unless it has a very short "hang tail" or a ctscc tone is present only on the people transmitting

and no tone present during the repeater hang time. Then you can use a ctcss tone decode.

Crossband repeat is more practical for simplex operation.

Good Luck

Tom

The discussion arose because this particular 5245 seems to have a
10544 oven oscillator. No 5245 that I have seen has that
configuration. The 10544's that were used in HP equipment that came
(to my knowledge) a bit later than the 5245, all had 10 MHz output.
The 5245 that I have has a 1 MHz crystal in a cylindrical oven with
an external oscillator board. As you mention this is followed by a
board that multiplies the 1 MHz up to 10 MHz. I think this is the
standard configuration as you were describing.

The particular 5245 of the OP seems to be unusual in that it has a
10544 for a timebase, and that 10544 is unusual by having a 1 MHz
output.

The poster wanted to use the timebase - out of the counter - as a 10
MHz reference. It's been pointed out that even a standard 10 MHz
10544 wouldn't be that great compared to more recent 10 MHz
oscillators.

Just trying to clarify what we were talking about.

2448. Sony ICF-SW7600GR

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-19 08:54:49 UTC
From: c200herry@yahoo.com
Message-ID: <bdf14960.0202190054.53dc290a@posting.google.com>
Source record: 47151

Hi everybody.

I have been thinking about buying Sony ICF-SW7600GR
receiver. But I found following information on the Web
about Sony ICF-SW7600 receiver:

ICF-SW7600
Radio Netherlands' measurements
Frequency Range | Sensitivity (in microvolts)
| for 20 dB S+N/N
---------------------------|----------------------------
2 - 6 MHz | 2.1 mkV
12 - 17 MHz | 10.6 mkV

Bandwidth	Dynamic Selectivity
+/- 5 kHz	26.0 dB
+/- 10 kHz	46.0 dB
+/- 15 kHz	51.0 dB

Blocking level ..... 4.2 mV

Image Rejection ..... 16 dB
(at +/- 910 kHz)

Intercept Point ..... -5 dBm

And I'm wondering:
Does Sony ICF-SW7600GR have the same selectivity and sensitivity
as Sony ICF-SW7600 ? I think that above mentioned characteristics
are too bad for receiver of that class (dual conversion, Synchronous
detection and so on).
Could anybody tell me smth about selectivity and sensitivity of
Sony ICF-SW7600G/GR model?
Has they been improved?
Maybe anybody knows any other additional information?

Thank you in advance.
Andrew.

Others have provided info on the "copper cactus" which has an excellent rep but is heavy. I've found that a simple 1/4 wave made by attaching 4 radials and a vertical to a PL259 (?) panel-mount connector is more handy cuz it is self supporting on a desk or other flat surface. A much lighter J-Pole can also be made using aluminum arrow shafts. These are available from <http://hometown.aol.com/Arrow146/index.html>

Looking for airwound coil or coil/switch assy for MFJ 941
antenna tuner. The subject is a "D" model, but I suspect
the coil/switch would be the same in all 941 sub-types,
and probably the same in MFJ's other 300 Watt models also.
MFJ sells this assembly for $37.50, so I'm looking for a
cheap deal that makes the new one not a good buy. I will
buy a whole tuner for parts, if it's cheap enough. Don't
care about cosmetics, just the condition of the coil and
selector switch!

From: Dan Long <w4tq@mindspring.com>
Message-ID: <a4u7ic$4ai$1@nntp9.atl.mindspring.net>
Source record: 47168

B&W Low Pass Filter - FL10/100 - Ebay

This filter is new and unused, and includes the original box. It is rated at 100 watts.

For those who aren't aware, the purpose of the filter is to prevent the unintended transmission of signals (harmonics, for example) above 30 megahertz (10 meters). The filter is placed between the antenna and the output of the transmitter (or transceiver). Aside from helping to comply with FCC regulations for signal quality, it will prevent certain types of TV interference.

For auction on Ebay, click on:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1332440081

I will be glad to provide additional information. Contact me at w4tq@mindspring.com

2470. Best Base/Port./Mobile Rig ??

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-19 20:56:36 UTC
From: Cathexis@yourhaterols.com
Message-ID: <3c72ba5b.242444739@news.erols.com>
Source record: 47173

Greetings,

This is a cross-post from the DX ng. No one replied in 24 hrs. so
maybe they think it's OT. No sore feelings - they're very helpful bunch
of folks. Since writing this I've seen an ad for an Alinco offering that's
similar. There may be others. In re-reading this I realize that perhaps the
biggest question is: Can they be used port.? Bat.-paks exist for these rigs?
Any info pro or con would be appreciated. Thank you.

Andrew

Howdy,

Yep. Which one can "do it all " best ?
By do-it-all I mean it should be capable of HF plus more
in multi-modes. It should be capable of base station,
portable or even mobile use without jumping through
incredible hoops. It should also be capable of linear
amp. hook-ups.

The FT-817 is a neat looking radio - but only for QRP.
That seems to leave the IC-706MKIIG and the FT-100D.
So I guess it's down to these two unless I missed something.
The usage idea would be base+ amp,, portable meaing out
on the carport on cool summer nites (important), and mobile
capable so unit can be mounted in minivan for possible planned
cross-country/VE trip.

Mostly I'm not sure of the portable abilities here as I don't really
want to be lugging heavy PS's out on the carport. I think it would
be alot of fun to have 1 radio you could work with as a base, then
pop a power pack on and go out to the porch, than pop into your
vehicle for those late-nite runs to 7-11. Also, I don't know which is
the better radio in general. Any feedback would be appreciated as
summer is coming quicker than you think !

Thx. es 73 de KG4JBM / Andrew

2471. Request fro Comments: MFJ- 1026

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-19 20:59:01 UTC
From: Cathexis@yourhaterols.com
Message-ID: <3c72bc1c.242893987@news.erols.com>
Source record: 47174

This is another cross-post which probably shoulda been here in the first place:

Howdy,

I've been reading about , and getting intrigued by, the MFJ-1026.
I've read the on-line manual and some favorable reports on AC6V's web-site.
Does anybody here have any thoguhts, opinions, reviews, etc. of this that
they'd like to share ?

I might get one in march and planned usage would probably be to
throw up a simple homebrew wire antennas from backyard trees. I have one
up now that's 1/4 wave and does good but noisy. Usage will be on 75M net
and more later if does good. Aware that MFJ-1026 can be used for null or
enhancement. Seems pretty good, would like to know what DX'ers here say.
If it helps, rig is FT-980 which I think is great reciever also and ahead of the
1026 will be Yaesu FL-2100B amp and Heathkit tuner. Please accept my thx.
in advance.

Andrew / KG4JBM

I have 3 radios, 2 must go
one of the dualband icoms and the clegg 220 rockbound

both icoms are:
high power 50/35 (2m/440)rx AM airbands and well into the 170's
rx down to 420's and up into the 470's will do gmrs or frs recieve
(not t-a for xmit here) have manual, power and mic cords with dtmf
mike
the 2710h has dual recieve and crossband, the 207h is single recieve

the clegg is 220 rockbound (crystal) 10 watts with the calling
frequency installed (used for packet) have mic, manual, and power cord
(is attached)
dtmf pad on radio is nonfunctional aftermarket, but no problems with
the rig.

207h $200 shipped
2710h $275 shipped
clegg fm 76 $70 shipped

I can be reaced via email OR by phone ONLY

: tell from the pristine PLL board. Only that it was owned by a no-code
: tech at one point. It was so clean, it was obvious it hadn't been
: abused. It was about a 9.5 on the looks scale. After a total realign,
: it's a 10 on the working scale,except for one bandswitch plastic
: coupler has a little play from a slight crack. I just only go
: clockwise to keep from goofing it up worse. Going the other way
: stresses it on mine with the crack the way it is. Now the henry I
: think did have a few problems, but mainly it just didn't work right.
: Probably from misuse. But he didn't pay much for it. Maybe 400$ or so.
: He went though it and fixed it all back up to factory specs including
: the new roller coil, which was hard to turn. He might have even put a
: new skirt on it as it looked nearly brand new when I got it. I paid
: about 900$ for it, so it's not like I got a steal deal or anything.
: But like I said, it was like new nearly and I knew the owner to be a
: top notch tech so I coughed it up. Just buying from a ham doesn't mean
: the gear is good also. Some abuse the heck out of them. I've seen some
: at hamfests that look like a truck had drug them in by a rope. It's
: more up to the person and how they take care of things rather than if
: they have a ticket or not.
: MK
```

This is so true. To the original question as posed I still would have said no.

But I have had mostly good luck as roughly 2/3s of my radios are used and most were obtained as surplus or from swapmeets and even from parties on the net. They are all on the air (when I can spare an antenna). There is no such thing as a perfect new radio, let alone used. Most hams who have been in the service for a while have to part with equipment to make room for more so there is a lot of worthwhile gear out there. There is no shame in full disclosure when there are those of us with varying technical abilities and specific interests. The price just needs to be realistic.

I once had someone offer me a working TR-4 with power supply that was pretty scratched up and had been modified with markings in Braille for $100. Not a bad deal for just getting on-the-air. Consider that ham radio requires "some" technical abilities, and that not even computers are really "plug-n-play".

Still I have seen some real horrors from friends of mine who were unfortunate enough to get burned buying a piece of junk from some huckster who picked it out of the dumpster after the last swap-meet.

Regarding your bandswitch coupler, It is called a "Universal Coupling" Part # D22-0402-05 and should be available from https://www.pacparts.com/
I just rotated the one from the load control to the bandswitch and drilled and tapped a piece of Teflon rod for setscrews.

Good luck,

Jim, ac6tk

2492. Re: Help! what rig does Icom IC-RM2 go with?

Just got an used ic-725 which needs a lot of cleaning, AF and Squelch knobs
are very noisy and produce a lot of static when used.
I would like to remove the front panel and spray clean the volume and
squelch control, and how do I remove the knobs and the tuning knob, just
pull on them?
Please any input would be appreciated

Thanks

Gil

2494. Help? Sony Wavehawk Scanner info..

Hi!

Does anyone have any in-depth documentation for the Yaesu Atas-100
antenna (meaning schematics, service manual or similar, accessories), or
pointers to such?
I've searched the net but found very few references, most of which are
reviews. Only wa8lmf has something to homebrew a DC-coupler. Yaesu site
itself has nothing on this antenna.

Thanks to whoever may help me.

Generally the main tuning knob does have a set screw under the knurled
rubber sleeve that covers the knob. The knurled sleeve is a rubber
ring, it will just slide off with a little coaxing. The set screws are
metric as i remember they require a 2mm allen wrench. Most of the
other knobs pull directly off like Mark said.

1. Ask him where he will get his material from and what format those
broadcasts might be in.

2. Have him read Consumer Reports on the subject.

One key is the ability to deal with a variety of pictures and aspect ratios,
particularily the 16 x 9
screen format.

from Operating Manual FT-847
Band and MHz keys
the band key's may be used, in the vfo mode ,to jump to the next Amateur band above ^ or below the current operating band. When moving to a new band, The FT-847 will move to the last frequency and mode on which you were operating on that band

If the Fast key has activated the Fast mode. pressing the band key's will cause the Transceiver to toggle between HF [the last band/frequency on which you were operating]. 50 MHz 144MHz and 430MHz ; all the hf bands other than the last one on which you
were operating will be bypassed.

Message-ID: <ole77ucnbgpg7frd88iar0m0ko2as0jvoa@4ax.com>
Source record: 47117

As the only available amateur radio operator in our housing area, I have been "volunteered" to coordinate communications for our recently created CERT team. (Community Emergency Response Team.) We are working with the county EOC in setting this up. My first job is to recommend radio equipment for the CERT officers to use in the case of an emergency. We are assuming worst case emergencies. No power, phone, or repeaters.

Our housing development consists of 1600 homes in a fairly isolated area. It is about two miles long and one mile across. The terrain is fairly hilly, and line-of-sight is seldom possible. I had first considered using 5-watt business band HT's, but after reading about the GMRS service, it looks like that would be the ticket. Five watts FM on UHF, authorized to use a repeater (could have one at one house) and outside antennas, and the ability to communicate with people using the FRS hand-helds. Anyone else in this situation? What did you decide on for equipment? Thanks for any inputs.

Megger - Biddle Insulation Resistance Tester - Ebay

This is a very nice meter, with the hand crank. One end of the scale is labeled in thousands of ohms, and the other end is labeled in megohms. Test leads are attached on the side, while depressing the black buttons on the front, a very nice design. The meter is in excellent condition, as is the metal case. Shown below is the meter, and the meter inside its protective metal case. This is certainly the nicest looking Biddle Megger that I've ever seen.

I'm also including a neon bulb and two resistors that can be used to verify calibration. Also included is a 13 page technical discussion on insulation testing and meggers.

For those who aren't aware, a megger is a resistance checker which performs its test at a very high voltage (up to 500 volts, depending on how fast you crank).

For auction on Ebay, click on:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1705068440

I will be glad to provide additional information. Contact me at

There are several different pixel sizes of screen definition. Different aspect ratios of screen layout. Different ways of setting the whole thing up. New requirements for antennas. It's a way complex subject. Best bet is to send him to a big newstand, to look for magazines and guides to HD TV and Home Theater. I believe there's also a "Dummy's Guide" to HD TV. He needs to educate himself, set a budget, then go from there.

A Google search for "hdtv" brings up the newsgroup, alt.tv.tech.hdtv

A "home theater" search brings up, alt.home-theater.misc

Sounds like a decent plan. Those neighbors who would just need to
communicate during emergencies could be made aware of a simplex FRS
frequency to contact team members on.
Just keep in mind, any repeater frequencies will not be compatible with
FRS, so you'd need to monitor that channel seperately.

2532. Kenwood TS-940S odd RS-232 problem

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-20 19:01:25 UTC
From: haynes@alumni.uark.edu
Message-ID: <9oSc8.3038$0C1.299047@newsread1.prod.itd.earthlink.net>
Source record: 47135

Wonder if anybody else has seen a problem like this. I have a TS-940S with the RS-232 control feature added. At one time it worked, and programs like RTTY by WF1B would use it and the Amazing Kenwood program would display from it. Now those don't work anymore; RTTY says the radio is not responding and AK just shows a blank panel.

So I connected to it as a virtual terminal and sent it a command. Nothing happened for a while, and then after a few seconds the correct response code came back. I guess the other software says it is not working because the response doesn't come back immediately. I can't imagine any mechanism that would cause this kind of delayed response.

2535. Help with TS-440 no RX problem

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-20 19:34:29 UTC
From: krish <vu2vku@aol.com>
Message-ID: <3C73FA45.8BAA29FA@aol.com>
Source record: 47138

Hi,
I have a TS-440 which was perfectly working until i messed with it.
I bought a 7 pin DIN connector from Radio shack.
I soldered a couple of wires to pin 2 and 4.
I soldered a couple of wires for the ALC and ground.
To the end of the wires, i soldered 2 phono plugs.

The 440 instruction manual instructs one to plug the jumper to
enable the auxillary relay to key an amp.

All i did was, set the jumper and then plugged in the 7pin connector,
powered up,
put the radio in CW and keyed to a dummy.

The radio clicked and all was fine and i saw no voltages on the relay
key line. After doing this a few times, the radio seems to be
stuck in the transmit mode. NO AMP was involved.

The "ON AIR" led is lit when i power the rig on. There is no audio from
the receiver since it is cut off.

If i transmit either SSB or CW, there is no relay click and the rig puts

out full power.

I reset the processor and found that the amp keying relay is
in transmit mode all the time as soon as i power the rig.

So i am wondering if someone could help me locate the component ,
probably
in the IF or Control module , that is responsible for switching the
radio from
the RX to TX modes. It could be an open transistor ????

My guess is that it simply cannot be the relay .Its gotta be the
control signal,
putting the rig in the xmit mode, the "ON AIR" led is also on.

I have done a processor reset. Not murphys playing around. What am i
missing
in short of selling the rig, sending it to kenwood ????

I will have a service manual on hand by the end of this week.

I appreciate any tips.
thanks

I just got a great deal on an amp. The name on it is Marko 100F. Inside it has 2 SD1452 transisters. Does anybody know anything about this amp, or the transisters. It also says that its a 40 through 10 meters. What I looking for is input wattage output wattage and some kind of idea how old it is. I have a feeling its fairly old as the construction is REAL good. Thank you and 73, Bill KF6WXJ

Well, frankly EM 80, EM 81 and EM 84 is not hard to find at all in
Europe. Maybe in US.
I have plenty in stock of all these types + EM 71 and a few EM 87 (and
some NOS 6U5). Sorry, no EM 4/11/34/35

Regards,

Arnold Goks&#65533;yr

Well, around here it costs $5 for a 16 oz. bottle in drug stores.
Agway has it for horses in the qt. size for $5 a quart. No animal
supply houses have the gallon containers for the $7 you see on the
net. No electrical supply houses around here have transformer oil.
This leaves buying transformer oil from MFJ for $20 a gallon.

Even though it is nontox and lasts forever, mineral oil makes a mess
if it leaks. Mineral spirits, OTOH, will evaporate if it leaks out.
Has same dielectric coefficient of 2.0. It is flammable but a spark
won't explode its vapor. Boils at 310 fahrenheit. Looked like an OK
idea that no one has discussed. Costs $3.50 a gallon.

Not sure about the mineral spirits.. that stuff does burn. Wonder if
anyone has considered Brake Fluid? It boils at 450 C, and at Trak Auto,
it's 2.99 a quart? Walmart probably has it cheaper. I've never tried
it, but pretty cheap stuff.

I know DOT 3,4 absorbs water. I think one of the higher DOT numbers
is silicone oil and might be OK.

for your car radio's. They connect to your battery directly and have a cover.

The one I found at the local marine shop looks a bit under amped. Underneath the cover is 4 Spade connectors, 2 red 2 yellow. It looks like it would be ok for my 2m rig, but Im not sure it would handle the 20amps for the HF rig.

I looked on the packaging for amperage, but nothing there. Im doing a search for the Yellow Spade connectors now for amperage.

Anyone using them, is the a Larger Amperage model available.

Thanks
Rick KF7QZ

To fill a Heath Cantenna, I used mineral oil. Bought it from the drug store. Got some funny looks when I checked out with god-knows-how-many little pint bottles of the stuff to fill up my gallon container. The oil worked fine, but it's kind of expensive.

MFJ sells a wet dummy load -- they also sell the transformer oil separately. It's about $25 for a gallon.

I remember reading that hydraulic oil (as used in plant
machinery, not brake fluid) was a good amateur radio
substitute for the real thing.

2579. A goody returns

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-22 00:29:03 UTC
From: Brenda Ann <servfsr@kornet.net>
Message-ID: <a543bm$570$1@hiline.shinbiro.com>
Source record: 46849

The following was posted last September. I ran across it again in my personal archives, and thought it deserved (probably yet) another run. :)

Fleamarket Talk followed by..... ENGLISH translation...
1. This rig puts out a big signal... Its 50khz wide !
2. This is a really good CW rig... It doesn't work on SSB !
3. It seems to be a vintage regenerative type...It oscillates!
4. I just re-tubed it... Got 'em from a questionable USED tube stock!
5. I just aligned it... The slugs on the transformers are jammed!
6. I don't know if it works... It doesn't work and probably never has!
7. It doesn't CHIRP... Probably cause it doesn't transmit!
8. The audio sounds great... The 120hz buzz is faithfully reproduced!
9. It just was serviced... I sprayed WD-40 all over the wiring!
10. It comes with the original box... Just scoop the kitty litter out!
11. Better buy it cause it wont last... No translation needed!
12. Sure, it works at full power... It sucks all it can from the wall!
13. Frequency stability is great... VFO doesn't work, you'll have to use crystals!
14. This rig has wide band coverage..... It drifts up and down and out of band!
15. This rig was popular in its day.... They had many HF nets on repairing it!
16. QST gave this rig a great review.... The language broke new ground for profanity!
17. It might need abit of tweaking... Marconi himself couldn't fix it, yet align it!
18. It was used in government service... Stored outside on wooden pallets!
19. The dial drive may need lubricating... The gears are stripped and set screws locked!
20. I plugged the rig in to see if it lights up... The light came from the 2 ft flames!
21. I'm selling it cause I have 2 of them... I'm selling the parts radio!
22. It came from an estate sale... Any problems, take it up with the owner!
23. I'll help you carry it to your car... I'll do anything to get rid of this boat anchor!
24. This is the rig of my dreams, I really wanted one as a kid, but now (sniff) I've goto let it go... As I've gotten older I've realized what a hunk of junk it is!
25. I'd keep this baby, but my wife is making me clean everything out... I finally got around to giving this rig the proverbial heave-ho!

This is one of most "recuring" threads I ever seen on the net.
I use good ole car ATF, it is hydralic oil with red dye in it.
Been using it for years, it can handle much more heat than mineral oil ever could.
Easy to get too.

Does anyone know if the Kenwood SM-220 station monitor will work with the Kenwood TS-850S radio? My owner's manual lists the SM-230 as an option but says nothing about the SM-220.

Also, I see things such as BS-8 pan adapters mentioned on eBay with some of the SM-220's I've seen advertised. Is one of these required and if so, what does it do?

TIA

Tim

2590. FS before going up FA on 2/23- Motorola, Yaesu, Kenwood, Dell

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-22 03:37:14 UTC
From: tim <tim@tabol.com>
Message-ID: <K1jd8.77847$s43.21692313@typhoon.columbus.rr.com>
Source record: 47092

I have the following for sale before hitting the Ebay auction block on Saturday morning.

Motorola HT1000 UHF 16 Channel, very nice condition. Comes with drop in standard rate charger, battery and speaker mic.....Asking $350 OBO +shipping. Programming is available for a minimum charge.

Motorola MT1000 UHF 99 Channel, fair condition, needs a new display; however the radio transmits and receives excellently. This unit comes with a battery and drop in charger, a new antenna is on order and will be included....Asking $250.00 OBO + shipping. Programming is available for a minimum charge.

Yaesu FT50RD - ultracompact HH, RX: 76 - 999 MHz Has had MARS/CAP mod completed. Direct Keypad entry or PC programmable with appropriate cable/software which is NOT included. This unit is in fair condition and comes with a dead (???) battery, I don't have the proper charger for this radio and can NOT guarantee battery condition. The unit works great on an AC adapter.......Asking $200.00 OBO + shipping

TE Systems - 100watt VHF AMP - 150-174 MHz. Nice shape. I believe it requires 1-5W in.
Asking $250.00 OBO + shipping

Yaesu FTC-2205 6 Channel VHF Handheld. This is an older unit and is in fair shape. The plus with this unit is that it is diode programmable.....just order the cheap diode packs from Yaesu and follow the formula to get the appropriate freq. Comes with Deluxe drop in charger which does Trickle/Standard/Quick charges. Battery seems to hold a charge but again, no guarantee.....Asking $150 OBO + shipping.

Maxon SP-2550 10 Channel VHF Handheld, Very rugged cast aluminum case. PC programmable with proper cable and software. This unit is in good condition and comes with a drop in charger. The battery does NOT seem to take a charge on this one. They are available for about $40 - 50 online.
Asking $150.00 OBO + shipping

Kenwood TK-200 6 Channel VHF Handheld. This is a crystal controlled unit in nice condition. No charger, the previous owner installed a 1/4 jack on the side to charge the unit. I used a 10VDC charger from my kids RC car Transmitter and the battery charged up but I'm still not sure of the battery life/condition. TX and RX seem strong.
Asking $100.00 OBO + shipping

Dell CPi Laptops - 266MHz, 32MB RAM and up, 2.1GB HDD's and up.....I have a couple of these units, contact me for more info. and pricing.

Photos will be taken and available upon request

Trade offers are welcome, however be aware that I'm cleaning house so I will be very picky in that area. I'm interested in computer and communications equipment.

All prices are OBO and do NOT include shipping costs. I will package each unit nicely and ship via your preferred shipper and method (overnight, 2nd day, etc) Although as of late,

I've had the best of luck with the good old USPS!!!

Please contact me at: tim@tabol.com with questions or if interested.

2591. Coax cable lengths

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-22 03:43:17 UTC
From: "Bob M." <xxxxx@yyyy.zzz>
Message-ID: <p7jd8.20204$BW5.8416928@news1.rdc1.va.home.com>
Source record: 47093

I hope someone can give me a definitive answer.

I'm trying to connect some radios to a UHF duplexer. I've been told that the coax cables should be multiples of 1/4 wavelength. At 450 MHz, the wavelength is 299.8 / 450 MHz, or about 0.666 meters.

RG-58/A coax has a velocity factor of 0.66, and every reference I've seen says to multiply the electrical length by the velocity factor to get the physical length. So I need to multiply 0.666 meters times 0.66 to get around 0.44 meters or about 1.5 feet.

Is this calculation being done the right way, or does it only hold true when the coax will be radiating, as when making a co-linear vertical antenna? Seems to me that I did something similar when calculating the length of wire for a dipole antenna, but I thought one DIVIDED the electrical length by the velocity factor to get the physical length?

There must be some UHF gurus out there who can help me with this calculation. Thanks.

Bob, WA1MIK

2592. FS: NEW!! DIAMOND ANTENNA

Newsgroup: rec.radio.amateur.equipment

Source record: 47095

I have a never been used Diamond Antenna that I found in my garage. I bought it and never set it up.

Specs:

DIAMOND X2200A
BAND: 2m/1-1/4m
GAIN: 6db on 2m and 7.8 db on 1-1/4m

you can get FULL specs at http://www.hamcontact.com/diamond/base.html

just scroll down to the dual band section. It also mentions the price at which I bought it, but I am not asking that. I want around $75.00 - $100.00. I am also interested in maybe trading for a good 2m MOBILE whip (used or not). I want to attach it to my ATV for use on S&R.

ANY OFFER CONSIDERED.

PLEASE EMAIL MY HOTMAIL ADDY:

tgbqaz@hotmail.com

THANKS

first off, can the RG-58 and use RG-174, double shielded coax.

second, while the lengths are ideally 1/4 wave multiples, I've found that it's not that critical, if your duplexer is of decent design.

third, yes, you are figuring correctly.

what type transmitter, receiver, and duplexer are you using? E-mail me and I may be able to give you some tuning tips

g

2594. Re: Coax cable lengths

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-22 04:04:26 UTC
From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <3C75C34A.E24ED33D@dialpoint.net>
Source record: 47097

First thing is that you do not use rg-58 coax with duplexers. You need to use something that is double shielded. There is always a big debate about the 1/4 and 1/2 wavelength to connect to a duplexer. Most of the time it does not mater what the length is.

I have not ran your numbers for the exect length but it seems correct. To make the lines an electrrical length you take the physical length and then multiply by the velocity factor. A 1/4 wavelength at 450 mhz is about 6 inches. If the VF is .66 then you multiply the 6 inches by .66 and get about 3.69 inches of coax. You also have allow for the length of the connector. To see if the lenght makes any differance in your particular case get several coax connectors such as barrels and right angle connectors . Put them in line with the coax one at a time tuil you get enough to make up about a 1/4 wavelength of extra connectors. As you add each connector check the swr and desense of the cavities. If there is any big change then the length does mater in that particular case.

I need smaller stuff in my shack.
I'm considering a FT817...but I'll need an amp.
I have an old Palomar TX-100.
Anybody tried to use one of these?
Should it need anything more than low pass filters?
Anybody willing to share their low pass filter design?...I
hate math...
Suggestions?
tnx, Mike

2596. FA: Cobra 142 and D-104 CB base radio

Newsgroup: rec.radio.amateur.equipment

Source record: 46999

http://page.auctions.shopping.yahoo.com/auction/61618822

This auction is for a Cobra 142 40 channel base CB radio. Included in the auction is a D-104 amplified desk microphone. This radio shows some age, but works excellent. It was recently put through alignment procedures at my local CB shop, which has been in business for 15+ years. The audio limiter was replaced, as the previous owner cut it. It now puts out approximately 12 watts AM and 20 watts SSB. Also included are "extra channels", extending the range above and below the normal CB band. The clairifier has been opened to allow you to slide about 5 kc's in either direction, giving you more coverage. The radio features a built in SWR/Power meter. The SWR CAL dial has been modified to act as a "dial-a-watt", allowing you to adjust the output power from almost 0 to the maximum stated above, great if you want to drive an amp.

>jack in the back for TNC.

Are you sure about that? I'm pretty sure that they advertise that the plug to program it goes into that back dataport.

Is it possible to program a motorola radio to follow a trunks system
just like a trunktracker scanner?

Here is my situation:
i have a 800mhz visar and i also have a trunk tracker at home. I want
to program my visar so it does the same thing as my uniden scanner. i
dont want to talk on the system but just listen and follow the radio
traffic.

thanks

From: ON5ZO <on5zo@pandora.be>
Message-ID: <GZpd8.169148$rt4.19212@afrodite.telenet-ops.be>
Source record: 47010

Dear OM

A friend of mine has a broken Kenwood TL-922 amp. The faulty part is the transformer of the power supply ("T2", according to service manual), we can tell and smell from the smoke coming out of it.
The Belgian Kenwood service center does not have this part available anymore, and according to them, both the stocks for this spare part in the USA as well as Japan are exhausted.
Now, my question is: does anyone know where to find this part, and if there is a manufacturer of equivalent transformers to replace it?

All help would be greatly appreciated!

Why not just get an FT-100? It would take up less space than an FT-817 and an amp, and eliminate the need for the amp...(besides, the CB amp won't have the cleanness and bandwidth you need)

I used an SM-220 with BS-8 with my TS-850S for quite a while, it worked extremely well. The BS-8 allowed me to connect to the IF output of the 850 to get a decent bandscope feature.

I have since replaced this with an Icom 756, but I still use the SM-220 as a station monitor with ALL of my HF gear.

GE MPD UHF standard model 48 channel alpha-numeric display. Nice with little wear. Good battery. $100.00
GE MPD UHF Standard model 48 channel Alpha-numeric display. Fair shape. good battery. $90.00
GE MPD Scan UHF This is a 4 button scan model in good shape with a new battery and rapid charger. 48 channel alphanumeric display, 440 - 460. $125.00
GE MPS VHF 10 channel Like new with new battery, new antenna, and charger. $55.00
GE MPS VHF 12 channel Set of 4 that talk to each other and all have new batteries and antennas. All in a rapid rack charger. $200.00
GE PCS VHF 136.-150. 2 channel. I have this on ham frequencies now with battery and rapid charger. $55.00
GE PCS UHF 440 - 470. 8 channel, This is working on the ham bands now with battery and rapid charger. $75.00
GE Monogram UHF portables 3 with 1 dual slot charger. 10 channel $200.00 for all 3.
GE phoenix sx VHF 16 channel priority scan. With all accessories including a power plug. Tested working. $75.00
Midland 70-336B VHF 8 channel 35 watt mobiles with mics. I have 3 of these. $75.00 each
Marconi UHF portable 16 channel scan made by midland $75.00
Mastr II UHF 75 watt mobile, Painted handle. $75.00 last one
Mastr II Control cable, 8 channel. $8.00 each less the more you want.
Mastr II control head. for mobile repeater operation. $5.00 each.
Mastr II mic. $5.00 each less the more you take.
Mastr II tone boards. These boards will hold 8 different tones or 1 for each channel in the radio. $5.00 each
Mastr Exec II VHF 75 watt mobile. With all accessories. $60.00
Mastr Exec II Mobile extender VHF for UHF Mastr II $20.00 each. I have a large number of these so make an offer on 10 or 20.
Mastr Exec II Mobile extender VHF for UHF Ranger (Ericsson marked) $55.00
Mobile Repeater cable for Mastr II $10.00 each.
Mobile Repeater cable for Delta or Ranger. $30.00 each This would be a good start for a delta programming cable.
GE Voter in special rack with 9 rec. cards and test cable. $300.00
GE MPA, MPD Public safety Mics. $35.00 each
GE PCS Universal Rapid chargers. $35.00 each
GE MPA Standard chargers. $20.00
GE MPA Rapid chargers. $30.00
GE MPI chargers with wall transformer. $8.00 each
GE MPI Rack chargers. 8 position $25.00 each
GE MPI Mobile battery charger. Only one I have seen. For 2 watt battery. $20.00

GE white Versatones 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5. $4.00 each
I have a large amount of 203.5, 186.2, 179.9, 173.8, and 162.2. If you buy
10 Versatones $3.00 each. Buy 15 Versatones $2.50 each. Take 50 $1.50 each.
GE Mastr II Icoms EC $5.00 each, 5C $10.00 each I have 2 sets of EC/5C UHF
Icoms. I bought 7 sets of UHF 2C Icoms, This is the last my supplier had.
$30.00 a set 1tx and 1rx.
GE Delta down loading cables. Will work with S825 heads. $40.00
GE Delta mounting plates. $10.00 each
GE Ranger mounting plate $15.00
GE s-550 and s-500 mounting brackets. $5.00 each
GE Battery discharge analyzer. Another rare GE item. This uses the body of
an MPD to hold the battery. The channel display has a red LED rate readout.
Unit attaches to a rapid rack charger with a db15 connection. Analyzer has a
big
heat sink on the back for heat dissipation. $45.00 each. I have 2 of these.
GE little seen shoulder strap for any GE radio with rear accessory point
(where the belt clip is attached) Leather strap like new. $15.00
GE Belt clips $10.00 each
Motorola S1350C wattmeter with 10 watt 500-1000 MHz element. $75.00
Motorola GP300 VHF 2 channel with charger and OK battery. $165.00
Motorola Saber Speaker Mic. $35.00
MRC 100 repeater controller. Rack mount with manuals. $125.00
GE VHF Ranger 19C852150P4 110 watt. With cable, Base plate, Mic, 825 scan
head, and speaker. 228 channels with Alpha-numeric display Ready to program
and install. $275.00
Motorola Mitrek VHF high drawer only with 1 set elements.110 watt, $40.00
Motorola UHF converta-com Amp. 2 watts in 40 watts out. $50.00
Motorola adapter for 1801 suitcase programmer. Fits MX radio A & B proms.
$175.00
Assorted GE portables. PE' MPR, MPI, have several in unknown condition. Sold
for parts only $5.00 each
EF Johnson 242-8600 800 MHz with desk mic. $25.00
EF Johnson Challenger UHF 80 watt Trunk mount 99 channel alpha-numeric head
$225.00
Maxon Rack charger for the 0520/0510 radio. I think the SP2550 will work,
Rapid $35.00
Voter from IMTS phone system. I do not know much about this one. $40.00
Antenna Specialists glass mount UHF antenna. New in the package but package
is a little worn due to the Hamfests it has traveled to. $22.00
Antenna Specialists glass mount 220 MHz antenna. New in the package but also
worn due to me packing it around to Hamfests. $22.00

Consignment section
I have some friends who have those other radios you know "Motorola" that
asked me to add them to my list. they are reputable people or I would not
list for them.
Motorola X9000 VHF 50 watt with alphanumeric head and siren box $425.00
Motorola Maratrac UHF 100 watt 99 channel head $400.00
Motorola Maratrac VHF 100 watt 16 channel head still
in the box never installed. $375.00

Single rapid chargers for HT-600, MT-1000, P200 $25.00 each
Motorola HT-1000 Intrinsically safe UHF Re-cased Looks new
16 channel scan, with charger, $425.00
Motorola P200 UHF high power 6 channel $150.00
Motorola MT-1000 UHF 16 channel scan $250.00

Want list not FS
Programming cable for Johnson Scorpion portable. Extra Data module for GE suitcase programmer. Any cables that go to the TQ 2310. Dual band Ham mobiles. UHF mobiles that will go in the ham band. Original IC706
Need some MPA portables anybody have any FS? VHF or UHF.
Terms
All prices are plus shipping from 40201. All Items are used unless noted and only have a no DOA warranty. I take cash, USPS Money Orders, and Paypal.

Okay, all you vintage AM'ers, I need your advice...

I have a Johnson Ranger on its way to my shack. Although I've been a ham for 25 years, I've never operated any kind of vintage transmitter on AM (I've always been a CW operator). The little bit of AM operating that I've done has been with either modified CB radios or modern Japanese HF rigs. I'm going to call upon the experts to tell me what kinds of microphones would work well with the Ranger.

I love the looks of the classic Argonne AR-57. That elliptical shape just screams, "olde tyme radio!" From my pre-ham days on 11m CB, I recall that the dual element AR-57's sounded very nice on tube-type plate-modulated CB transmitters.

I have heard a lot of AM'ers using Astatic D-104 mics on their vintage rigs. That's another classic, but it doesn't have the visual impact of an AR-57.

I'm open to any and all suggestions.

Hi Mike,

Back in the late 1970s, I used a Heathkit HW-7 (and later, an HW-8) to drive a solid-state Pride 100 CB "linear" that I got in a trade with another ham. It worked just fine on 40m, 20m, and 15m (I didn't bother with 80m, but I suspect it would have worked there, too). As I recall, the 1 Watt drive level from the QRP rigs pushed the amp to 40 Watts output or thereabouts. When the going got rough, and I was not otherwise going to be able to finish a QSO, I just flipped on the amp and that was enough power to get the job done. As you mentioned, a good low-pass filter on the output of the amp is a must.

I hate math, too. (hi!)

Dean. I'm glad to hear that you've found a Ranger! It's the best of the breed. You'll find that the D104 will provide you with the best audio. I know there are many others and I'm sure you will have many other recommendations but for a lot of good reasons the D104 (no preamp) will do you the best. Try 'em all is my advice but keep a D104 handy!

Source record: 47021

This is a very neat looking radio and a bit on the Rare side. I am looking for the best offer over $250.00 It is a STONER PR-10 transceiver that works on 10 meters. I was amazed how sensitive this radio was. The stations just boomed in. It has been checked out on both receive and transmit and is fully operational. AM-USB-LSB multi speed scan, RIT control and a neat looking digital display. I don't have any DC power cord or operating instructions for this radio. The wood case is in good condition. Each side has a small screw hole from a mobile mount. The up-down microphone works great! I would rate this radio an 8 on a scale of 1-10. Please look at the pictures below. Questions can be sent to roblonn@cox.net.

I have for sale a nice condition Yaesu FT-101ZD. This particular
transceiver is the version with AM mode included.
The cooling fan option is also installed in this rig.
Cosmetically it is in nice shape with one small hairline scratch
next to the clarifier control. Electrically it is in fully
functioning condition with full output 80-10.
$325.00 plus shipping and insurance from zip code 76001

Thanks!

2620. FT7100 Software Question??

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-22 16:18:20 UTC
From: Don <rdpi@attbi.com>
Message-ID: <gbud8.11285$S01.549499@sccrnsc02>
Source record: 47023

I have a FT-7100 and would like to see if someone out there has the software for it? I'm not asking for a free copy, I will buy it. But I also have the software for the FT-90 and with this software you cannot move the frequencies around. Once you put them in you have to retype all of them if you want add a frequency in the line. I'm just wondering if the 7100 software acts the same way. I did find a different program for the 90 that will allow you to cut and paste to different channels that I'm using now. It's from RT Systems but as of right now they don't offer any for the 7100.

Any input would be appreciated.

Source record: 47037

Thanks to the respondents so far. I probably should have been more specific in my first post.

Actually I'm using a Belden 8240 equivalent that has a solid center, 100% foil shield, plus 95% braid, so in effect it is double shielded.

The Motorola radios I'm using have mini-UHF connectors on them, and I don't think they'll respond well to being mounted on something much larger than 58-size cable.

The duplexer is a 6-cavity Phelps Dodge unit with female N connectors on it. I suppose if everything is perfectly matched, then the coax length won't matter, but when I go put a wattmeter in series with the transmitter, I think at that point I'd need to put in a multiple of 1/4 wave.

A Bird 43 meter is 4 inches across, but the female N connectors on it probably extend that length a bit. Adding several more inches of coax plus two male N connectors should give me 1/2 wavelength at 450 MHz or so, and hopefully not affect the power readings due to a mismatch.

G'day all, new ham here (KD7PML)
I was given a used Kenwood TR-7850 without a manual.
I got a manual from Raymond Sarrio.
My questions:
Is the tone board add on for use with repeaters or is it for some other purpose?
If it's for use with repeaters, are there different tones needed for
different repeaters? If so, is that information found in the ARRL repeater
publication?
Anyone know of a source for the tone board add on for the transceiver?
Either a DIY or kit or purchase?

Thanks all
Al Szymanski KD7PML

You could write your own software. The only thing the Winradio has is a
fance scope on it. Big deal.

Congrats on the new ticket! Are you an Aussie living in the US?

> I was given a used Kenwood TR-7850 without a manual.
> I got a manual from Raymond Sarrio.

You were lucky...

> My questions: Is the tone board add on
> for use with repeaters or is it for some other purpose?

It is generally for use with repeaters. Most repeaters need to hear
a sub-audible tone before they re-transmit the received audio.

> If it's for use with repeaters, are there different tones needed for
> different repeaters? If so, is that information found in the ARRL
> repeater publication?

Yes, most will say that there are 38 different tones. How they
are used varies according to where you are located, and what
band you are using (two meters in your case). For example,
where I live, there are many different tones used by the two
meter repeaters, but most six meter repeaters use 114.8 Hz.

And the best eight dollars that you will ever spend is on the ARRL
Repeater Directory. It will answer all of these questions and more.

> Anyone know of a source for the tone board add on for the transceiver?
> Either a DIY or kit or purchase?

I am unfamiliar with that old radio, but if there exists a tone
board made specifically for it, do everything you can to buy it.

If not, then you must perform some surgery on the radio in
order to use an aftermarket tone encoder. Most hams who
do this use one of the Communications Specialists modules.
For example: http://www.com-spec.com/ss64.htm As you
can see, changing tones is a little bit of a hassle. That is why
many people will use such a radio for packet, and buy a new
one for general use as they almost all have the tone encoder
built-in these days.

By the way, it may interest you that many of us also use the
similar http://www.com-spec.com/ts64.htm in our repeaters.

2647. APRS with Yaesu FT-50 & ADMS cable?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-23 04:07:47 UTC
From: qrp5@my-deja.com
Message-ID: <cce22972.0202222007.29acf676@posting.google.com>
Source record: 46949

I am putting an APRS station together and just received my new Kantronics KPC 3+ TNC unit. I bought the modem cable today to connect it to my computer's serial port. My next item on the agenda is to connect the Yaesu FT-50RD handi talkie to the TNC. I would like to take a shortcut on this and use the cable that came with my ADMS software programming kit. I have been cautioned on doing this as it may risk damage to the radio, the cable and the TNC. I would like to ask if anyone else has ever done this successfully? Questions in my mind concern the pin-outs of the ADMS cable... do they coincide with the TNC cable requirements? Are there any hidden components in the plugs of the cable? Is the cable shielded, so as not to cause RFI to the station? Should I just try to buy a 4 conductor microphone/earphone plug and make up my own cable as per the KPC 3+ instructions? Help me out here, guys. I know someone has tried this before me, so talk to me. Respectfully, JJ

2648. Yaesu VX150 vs. ICOM IC-V8 Any opinions?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-23 04:17:16 UTC
From: Mike
Message-ID: <3c7717ca.51675036@news.pacifier.com>
Source record: 46950

I am comparing these two for purchase. I am looking for any opinion, warnings, suggestions etc.
My goal would be to have a handheld that I can use with mag mount antenna and cigar lighter adapter in my personal vehicle while still being able to put on the rubber duck and run off battery when I am in my company truck.
I have been told the SMA to BNC adapter for the Yaesu creates a posibility to put undue stress on the antenna conection at the top of the radio. Anyone have any experience with this?

2649. FT-100D versus IC-706MkII G

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-23 05:51:08 UTC
From: Joe Mehaffey <joe@mehaffey.com>
Message-ID: <3C772DCC.49BB391F@mehaffey.com>
Source record: 46951

I am in the market for a new mobile HF rig. The FT-100D and IC-706MkII G seem to be the most advanced as far as features are concerned.

The FT-100D is attractive because it has a compact "all band" autotune 7mhz+ antenna. However, I read excellent reviews of the IC706MkII, but some "horror tales" about the FT-100D.

Can someone tell me if all of the problems in early version of the FT-100D are gone in current production? (ie: muffled audio, RF instability and overheating).

Any comments on the CURRENT VERSIONS of the two units will be much apprecaited!

Thanks
Joe Mehaffey

2650. AEA Contester CK-2 and IC-751A problem.

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-23 07:17:08 UTC
From: Michael Herron <Hurricane145@worldnet.att.net>
Message-ID: <UlHd8.1187$FE4.64885@bgtnsc04-news.ops.worldnet.att.net>
Source record: 46952

Ok, I have an old AEA Contester CK-2 and an IC-751A. The CK-2 is flaky when hooked up as it would seem it should be. I already resolved the paddles being wired wrong when plugged into the CK-2 that was easy enough to fix with an adapter cord being made. It does not come close to keying the 751a correctly when plugged into either - or + output on the back of the CK-2. Anyone using the same or similar gear with the CK-2 have this problem and resolve it??? I suspect something has to be changed in the way it is hooked up such as changing the wiring for the phone plug connector. Any comments much appreciated. Mike K7MH

I'm not sure why I would want to:

1. The 756 has a built-in spectrum analyzer that works FB
2. I don't think the 756 has an IF Out jack.

Please explain...and thanks.
Neil

Some folks have said that its viscosity is too high to support good
convective cooling. Drug store mineral oil does appear to be thinner
than motor oil or hydraulic oil, but I could be wrong.

I need to look for a study of fluids used to cool transformers.

Source record: 46955

Here is something that looks authoritative:
http://www.indiaelectricmarket.com/iemhome2/products/Transformer/Transformer_Oil.htm

So, your tranformer cooling fluid needs a flash point of 160
centigrade and a fire point of 200 centigrade. On a subsequent page,
they say 140 centigrade is OK for the flash point.

The flash point of mineral spirits is only around 50 centigrade, or
122 fahrenheit. See, e.g.:
http://www.eezimmermanco.com/products_files/MineralSpritOderlss.html

This would in general rule out mineral spirits. However, since most
of the time you are right there monitoring things and can tape a
thermometer to the can, you could pump 1000 watts into the thing for
around three minutes without danger. This makes it a practical option
under limited circumstances.

Kerosene is in the same ball park.

Hi Joe,

Unlike the bozo who recommended a search I appreciate all you have
done for the GPS community.

I own both currently and can't decide which to get rid of. The 706 is
OK not as good as the Alinco DX-70 I used to have of HF and never
has been all that wonderful on VHF/UHF I find the programming a bit
tiresome but have never invested in any of the radio programming
software for it.

The FT-100 is reasonable useful but it too is complicated to program
if you don't have a computer program to do it. Yaesu in their infinite
wisdom have not made the clone ability that makes other Yaesus easy
to program part of the FT-100 or "D" model. There is a work a round
using Bob Freeth's FTBasic program. This program will directly import
data from the ARRL Travel Plus CD and while it will not load the data
automatically and unattended it will do so semi-automatically.

I travel a great deal and find I usually take the FT-100 with the
ATAS-100 antenna for use in the rental car. This was easy and
convent enough that I regularly use it in England driving on the
wrong side of the road.

If you have more specific questions drop me an e-mail.

Russ -

I bought one pretty cheap after Sony ditched them. I'm not a gonzo
scanner user, but it seems to work well and covers everything from
Channel 19 truckers (handy when traveling) on up (no cell phones, of
course). There is much information in two Yahoo groups which recently
combined into one. It's at

http://groups.yahoo.com/group/SonySC1Wavehawk/

Archives are for members, so you'd have to join.

Most of the hundreds of archived posts are still kept under the two
earlier groups that merged. If you enter "sony icf-sc1" into the group
search engine, it will locate all three groups for you.

Apparently they have figured out how to make it work below 25 MHz.

Joe - I have no experience or expertise in either of these rigs myself, but recently did research them on the Internet. The most surprising thing I found was that the big ham retailers are still selling the FT-100s complete with the well-known problems, and the only remedy is to send it directly to Yaesu for updates under warranty. Having just suffered through a 4 month wait for Yaesu to get around to servicing my FT-736R, and getting this new news that ALL FT-100s before a certain manufacturing point are bad, I've sworn off Yaesu forever. If you must have Yaesu, I'd get a sworn statement from the retailer that the unit was manufactured AFTER the point where Yaesu fixed the problems permanently. Best of luck.

I need at least one more PYE 19" rack cabinet to match the 2 I already have. Size is 49cm wide, 30.2cm high and 30.8 cm deep (not measuring the back panel that sticks out another 7 cm). Says, "PYE Communications Equipment" at front of cabinet. Ventilation grill covers backhalf of top panel. Be particularly nice if any source is say 30 miles of Wakefield in West Yorkshire, (but perhaps unlikely).

I suppose if you have a cabinet it may contain some older PYE/PHILIPS gear. I'd buy that if cheap (just to get the cabinet!!). Thanks. Rich.

Hi Joe -

The Am-Com controller will give you the same thing with the 706 as the ATAS with the FT-100, except that it uses a screwdriver antenna instead of the ATAS. The ATAS is more compact, but the screwdrivers work on 75-meters if that is important. I'm not sure, but it looks like the new Am-com ATAS controller "may" work between the 706 and the ATAS antenna. You would have to ask them.

I have the Am-Com, a BB2 screwdriver and the IC-706MkIIg. I love that little radio. Also find it to be just as sensitive on 2-meters as anything else I have used mobile.

Thanks for all your work in the GPS field. Don't know what we would do without you and Jack.

You'll probably won't have a problem in locking on an active channel in the system but it would be very difficult to follow the same conversation (one Talk Group) if the system is busy with multiple active talk groups.

Hello Peter,
The entire site is tested with the current version browsers from Microsoft IE6, Opera 6, and Netscape 6. All pages including the W9INN Page are fine with these browsers....

If you are using an older browser (especially Netscape) then you might want to upgrade since many sites now use up-to-date html that was devised long after these older browsers were released.

The site is however 'optimized' for IE 6 (as it says on the home page) since over 90% of my visitors use Internet Explorer.

Mike,

Go with the VX-150 - you will really like it - check the reviews for both radios at http://www.eham.net/reviews/

Check both the handheld section and VHF/UHF radios section.

As far as the SMA adapter, Radio Shack has a pigtail you can order for about $15. Has a sma connector on one end and uhf female on there with a few feet of
RG-174 thin 50 ohm coax - takes the stress off the radio connector.

I have a VX-150 and it's great. ($125 at gigaparts.com)

Hope this helps

Greg

Possibly yes, but it is difficult. System information is
confidentially maintained by Motorola for it's customers.
This information along with specific information on
your Serial numbered Visar (with appropriate options) is
assembled into a special programming file that is given only
to your Motorola dealer assigned to program only your radio.
Of course you must be authorized by the firm whose fleet
you want to listen to before this effort may be put into
motion.

In my experience, it is fairly intensive for all parties
concerned for just one radio. We have cracked jokes
about the cost of cracking such a file, because it would
far cheaper to hire someone to carry your scanner for you.

This kind of operation is considerably easier for Nextels,
but still requires fleet owner's authorization for billing on
your unit.

THIS IS CRAZY!

Mineral spirits are like Kerosene or similar and are flammable.

My Heath Cantenna specified Mineral OIL! as a substitute.
not SPIRITS! Mineral OIL has a much higher flashpoint and
pretty much requires an open flame to burn.

I used Mineral Oil for years in my Cantenna, and the only
maintenance required was to wipe off the seepage from the
top lid once in a while. Look for it in gallon jugs for the
best price. Glad I didn't use Transformer oil. Also,
heavier oils are unsuitable because the resistor is cooled
by convection flow (hence the slight leakage on top) to
transfer the heat to the outside walls of the can.

Good grief, gang, we're just trying to conduct heat out of the element. And that paint can ain't the most efficient radiator in the world when the heat DOES get to it. Why are we measuring the oil with a micrometer and the can with a yardstick? Dump a gallon of cheap auto tranny fluid in the damn thing and let it go.

This is a very neat looking radio and a bit on the Rare side. I am looking for the best offer over $200.00 It is a STONER PR-10 transceiver that works on 10 meters. I was amazed how sensitive this radio was. The stations just boomed in. It has been checked out on both receive and transmit and is fully operational. AM-USB-LSB multi speed scan, RIT control and a neat looking digital display. I don't have any DC power cord or operating instructions for this radio. The wood case is in good condition. Each side has a small screw hole from a mobile mount. The up-down microphone works great! I would rate this radio an 8 on a scale of 1-10. Please look at the pictures below. Questions can be sent to roblonn@cox.net.

Make sure you connect the keyer output as if it was a straight key,
since the 751A thinks it is a straight key. The (+) keying voltage
should be no more than 0.4 positive Dc Volts.

For a straight key connection you still need a 3 conductor plug with
the keyer positive on the Tip and the Keyer ground on the Sleeve, the
center section commonly referred to as the Ring is left open. Remember
to turn off the 751A built in keyer. If for some reason the AEA CK-2
can't meet the voltage requirements, then use it to key a small reed
relay and connect to Normally Open contacts up as if they were a
straight key.

No, Ebay is GREAT for sellers, but buyers get screwed, but then many people like it.
If you really, really want some thing bad, I guess you'll pay whatever it takes.
For me, if I can buy it new for less than Ebay, I'll buy it somewhere else.
Ebay, good for sellers, bad for buyers. Unless your desperate.

Thanks everyone. I <DO> apprecaite the input.

complex programming does not worry me (too much), but I am over the era when ripping a rig open and searching for RF feedback problems is "interesting".

I think I will wait for Dayton and see if anything new comes along. Meanwhile, I guess I am impressed with the enthusiasm so many people are showing for the 706MkII-G. Sounds like a very fine rig. I am looking for a "holiday/rental car" rig so easy multi-band antenna operation is important. That is what is so attractive with the FT-100D.

Thanks again for the help!

That's not true in every case. I have bought and sold a lot of ham equipment on Ebay. I have found very good deals, and I have given many. You can always find examples where people get carried away and don't know the true value of something. I find Ebay to be very useful in both directions. Just bought an oscilloscope today at what I considered to be an excellent price.

Yes, I agree with you, many fine deals done on ebay,
did not care for it at first until I figured out how to use it.

Trick is to watch for local auctions for the older rigs or scopes
so you can pickup local most of the time seller is ok with it.

I got a sweet kenwood 530s from ham in SC and ups ground
shipment it was at my door next morning for $ 12 ship !
Good deal.

Or the item is in the test equipment section not ham or radio,
got a fine bird dummy load that way for $ 46.00 surplus us govt.
(cost Uncle Sam $ 800 new back in 1985)

Just seek out the good guys/gals with the feedback to back it up
and you are fine.

Just like at the hamfest, you can get taken to the cleaners or just get
carried away and overpay just like ebay.

I just set my limit and if it is too expensive I quit.

Anyone own one of these?
I 'fell' into a deal, have it sitting on my table, and of course no
manual.
While recieve works beautifully, I'd sure like to know how to set the
repeater shift and encode tones so I can put it on the local repeater
while waiting for the manual to arrive (that I intend to order on monday)
Thanks for any input.

You just have to learn how to use Ebay to your advantage. One thing
you can do, if you are looking for a specific item, is to put it in
your favorites file. Then check it for auto notification. As soon as
someone posts one, you will see it. Look for Buy It Now's. That's
how I got my oscilloscope. He posted today and I jumped on it before
someone else saw it.

The reason you have to provide a credit card number (always been that
way I think) is because Ebay wants to be sure they get their fees from
you. Nothing wrong with that. Don't know about a checking account
number. I haven't been asked for one. Maybe that's for their fast
checkout procedure. I don't use it.

Hello Bill and others....
This covered with a link you can click on to get the registration
email re-sent to you right away. Here is the URL.

http://www.eqsl.cc/qslcard/faq.cfm#Signup

Here is the text ...but you'll need to go the eQSL link above to use the
clickable link...

I registered but never got a Signup Code in my e-mail!

If it still hasn't arrived after 15 minutes or so (to account for
Internet delays), click here and we will re-send it to your e-mail
address immediately.
If your e-mail address had spelling errors, our fully automated system
will have received an e-mail about it. If you believe that is the case,
go here and you can correct the bad address and re-send your Signup Code
to you.

Good luck and happy eQSL'ing....

When you talk about "programming" the rig(s), you're, I'm guessing, talking
about programming favorite frequencies into memory?

Anything else, other than setting basic operating defaults?

I wasn't aware it took a computer and programming software to set up a
modern-day rig -- unless you're just talking about setting a bunch of
frequencies and repeater offsets.

IMHO the real probem with eBay is that around 1 in 20 sellers is dishonest and will deliberately misdescribe items. They usually want a money order and you will just be stuck, as eBay provides zero real protection against fraud. In fact, eBay's "insurance" program is itself a fraud because it only covers up to $200 and [which is not disclosed] deducts shipping twice: once into you and once you have to pay to return the fraudulent item to them. Also not disclosed is they require an expert's opinion letter as to value promised and value delivered -- for what typically is a $120 payout. Around here, no expert will fart for less than $250. As the word gets out that eBay buyers are ripe for the picking, the percentage of rotten-apple sellers will go up. You get some protection from the feedback system; sellers with high positive feedback ratings won't be active crooks.

Also, there is lots of stuff sold "as is" for the same prices as you see on eHam.net for equipment that a ham tells you is in good working order. Why anyone would buy electronics "as is" for more than salvage value is beyond me. How hard is it to test the item and say that it works or doesn't work? I just assume it is not working and bid accordingly.

2720. Kenwood TMV7-A radio and Comet dualband base antenna FS

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-24 06:48:21 UTC
From: bearcat51@yahoo.com
Message-ID: <9014cad1.0202232248.54d76467@posting.google.com>
Source record: 46922

Hello, I have the following for sale:

1) Kenwood TMV7-A mobile dualband radio., which has also been modified and is in mint condition, used only a couple of times. All accessories included. Here are some specs for the radio from Kenwood's web site:
-Large, reversible LCD display (the display is also removable for the security conscious)
-Dual receive on same band (f2), in simultaneous receive on VHF and UHF bands
-Up to 280 multi-function memory channels (180 channels when using Memory Name function)
-Memory name function. Identify each channel with up to 7 alphanumeric characters
-"Five-in-one" programmable memory (store five entire operating profiles)
-Guide Function
-CQ Review - check it out!
-PC programming software available for download (requires PG-4S cable)
-144 MHz/440 MHz
-Optional VS-3 voice synthesizer
-Optional remote head kits
Power is 5 (low), 10 (medium), and 35 on UHF (high) or 50 on VHF (high).
If you want more info on the radio, here is a link to Kenwood's web site:
http://www.kenwood.net/products/index.cfm?AMA=open&ama_mob=open&radio=TM-V7A&selection=Amateur&ID=25
Kenwood has a suggested retail price of $449.95 but I am asking $350, which includes S/H via UPS anywhere in the continental US.

2) Coment GP-9 dualband base station antenna. This antenna has never been used.
Here are some specs from Comet's web site:
It has a max power input of 200W, 8.5 db gain (146 MHz), 11.9 db gain (446 MHz), and a VSWR of 1.5:1 or less. It has an SO-239 or Female N-type connector. the antenna comes in 3 heavy duty fiberglass sections and is about 18' long rotal.
Here is a link to Comet's web site for more info:
http://www.cometantenna.com/base.html
Asking $150 for the antenna, which includes S/H in the continental US.

If interested in any of the two items or if you have questions, please email me at bearcat51@yahoo.com. Thanks!

2721. Adding high-frequency roll-off to stereo headphones?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-24 08:49:35 UTC
From: googlyelmo@earthlink.net
Message-ID: <3C78A920.6A4D360D@earthlink.net>
Source record: 46923

I want to cut the high-frequency response of a pair of mid-quality closed-cup stereo headphones I use for CW operating. I'd like to reduce the 'phones response above 8 KHz or so. I have used in the past true "communications" grade headphones with response cutting sharply off in the 7-10 KHz range, so I know what a tremendous benefit they can be for extended operating compared with phones made for listening to music with an 18-22 KHz upper cutoff. Much of the QRN, especially on 20 meters and above, is above 8 KHz. Getting rid of it is like dropping the weight of a backpack on an uphill hike.

I remember, dimly, reading somewhere that you can cut hi-freq. response by adding a capacitor across the two headphone leads. Am I correct in my recollection? If so, does the *type* of cap matter [i.e. ceramic, mylar, mica, etc.]? While I know that a bit of trial-and-error substitution probably will be involved here, what general value should I be looking at trying? Finally, exactly how should the cap be wired into the 'phone circuit? I think I remember reading that you simply solder one cap lead to each of the two phone wires, but please confirm/correct this. Thanks.

Please don't forget that lots of people are being "forced" to use
IE thanks to Bill. Lots of people aren't familiar with computers
and other browsers and just use what their computer offers.

If it would be possible to make statistics of browsers which have
been chosen by the users themself, I'm sure Netscape will do better.

By the way, I'm using Netscape 4.71 for quite some time now, and
there are only a few sites that aren't "readable". Some other sites
look a bit better in IE, but this is the first site that really makes a
mess on my screen, and I really browse quite a lot! :)

Bye,

Peter Hunt
Holland.

You have to know that ole Charles not only advocates eQSL as the only creed,
but also is a disciple of the Church of Micro$oft. Whatever this great
American company produces, simply *must* be great.

Computer security is an area that this gentleman knows nothing about. But
that's good, since he's one of the guys that produces an infinite stream of
money to security consulting companies. It's people like ole Charles who
promote the fierce growth of security tools like virus walls, virus
scanners, firewalls, trojan scanner etc.

A cap across the headphones will not give very good roll off.. If I were you, I'd make at least a two section LC Low Pass Filter. W3NQN is famous for his passive filter designs. He has many articles out there for exactly what you need.

FOR SALE:

Collins 75A-1 Receiver with filer. No case. Needs work but very much
restorable. No case. All original knobs.
Picture available on request.
Will sell for $275.00 plus shipping

Hallicrafters S-38D receiver, silver case and front panel.
Has all original knobs. Bandspread dial is slipping. Needs new
output transformer, but is otherwis ein good shape. Case has some
wear and scratches, but no bad dents etc. A very restorable
receiver. Will sell for $45.00 plus shipping

Hallicrafters S-40A communications receiver
Serial number HA-90221
Nice receiver - All original, with a fine looking
front panel. Original knobs, dial etc. Covers 540 kc. to 54
MHz in four bands, with sensitivity control, AVC on-off, tone
control, noise limiter, BFO and send-receive switch and rear
terminals.
Also has front panel headphone jack. Built in speaker. The set lights
up and appears to be working but has a loud hum. Likely just
needs a capacitor replaced. Will sell for $75.00 plus shipping

Realistic DX-160 Receiver with Realistic speaker
Excellent condition general coverage shortwave
receiver set. Will sell for $75.00 plus shipping.
Pictures available on request

Knight TR-106 transceiver with the matching V-107 VFO unit
and cables. This is a 6m AM rig with built-in speaker. Silver and blue
with a great looking case.
Front panel looks really good. Has all original knobs. It is NOT in
mint
condition, but shows less than normal wear. No bad dents or dings.
The power cable to the TR-106 is missing but you can easily make one.
I have not tested it but it is all there. No mods or damage.
Will sell for $135.00 plus shipping

BC-733F Receiver with dynamotor DM-53A for 28 V
DC operation.
Black case, complete and in good shape. Has
service and inspection tag from 1959.
Comes with the connector and the original
shockmounts.

Looks to be in very good condition. Unmodified. Will sell for $30.00
Picture available on request

R-268/ARN-5B Receiver - Black case, similar to BC-
733F, but marked for 24V DC
and no dynamotor. It's all there including the
shock mounts and special
bayonet connectors. Looks to be in very good
condition. Unmodified. Will sell for $30.00
Picture available on request

Hello Walt,
The minimum screen size I test for is 800x600. If your screen is
smaller than that - or - you have additional menus or browser add-ons,
or ISP ads on the side, that claim part of that space you may have to
use the horizontal scrollbars.
BTW whichever browser one uses has nothing at all to do with the
screen size. That is a Windows function setup in Display / Properties

> immune to macro viruses.

MS-Word 2000 (even the included-with-most-PCs SR-1 version) can be set to disable unsigned, untrusted macros. The option is under Tools, Macro, Security, High or Medium.

Of course, anyone that is concerned with security and viruses would have Norton AntiVirus 2002 (or equivalent) running and keep it (and everything else) up to date. It will also eliminate the threat without throwing the baby out with the bathwater.

Crume's book 'Inside Internet Security' advises that it is generally more secure to be up to date than to be on the trailing edge. Generally more old holes are being closed than new holes created. And the new holes are generally less well known. Good book.

Let me repeat - I see both approaches.

At my workplace they run Win 95 on the desktops and Win 2000 on the servers. The went cheap and use McAfee junk for AV. The place is a Help Desk disaster area. Blue Screens of Death left, right and centre on a daily basis. Even had a big virus mess a few months ago (things not up to date). Stupid.

At home (having seen the mess at work) I try to take the opposite approach and generally keep things up to date. Try to get the latest SW on sale (XP Cdn$99) or with a fat rebate (Norton 2002 Cdn$30). Never looked back. When we get a virus by e-mail , Norton pops up and offers to nuke it. Stable as all get out. Close to a perfect PC experience.

Of course, everyone is free to choose their own path through life. Best wishes.

Yes get the 100D. I have owned both, and while SOME of the rigs may have problems if you are buying it new
just make sure you can exchange it just in case. The 100D has more freq coverage, is better on 2 & 440, the
Yaesu antenna can be a bit finicky in some mobile installations, but once settled in works perfectly on all
HF bands. You'll need a high gain dual band antenna because the Yaesu antenna has no gain up there.
The mod to the rig is easy to do. I am more of a Yaesu fan anyways, so everybody has their own preferences.
The 100 has 300 memories. I also prefer the blue display. Both rigs are great so you can't go wrong either way....

2740. RS HTX-212 schematic wanted

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-24 16:45:06 UTC
From: Steve <sparkyXmantoo@yahoo.com>
Message-ID: <B89E7388.D7AE%sparkyXmantoo@yahoo.com>
Source record: 46942

I am looking for someone who could scan a few pages from a Radio Shack HTX-212 manual. I need the schematics for the radio and microphone and they are no longer available through Radio Shack customer service. I bought a used HTX-242 but it came with the microphone from an HTX-212, and there is a slight difference between the two mics because none of the scan or direct entry functions will work. I did some substitution troubleshooting and have determined that my radio and mic are both ok, they just doni¿½t match each other. Radio Shack was able to provide the pinout identification for the connector and the only obvious difference is that the radios provide different voltages to the mic, so I am hoping to be able to compare schematics and find the internal difference and make my mic work on my radio. I have only been able to find two HTX-212s locally, and neither ham has the manual, so if anyone could help me out I would really appreciate it.

Please contact me directly at sparkyXmantoo@yahoo.com (remove the X)

Thanks, Steve

Don't use any Micro$oft products and be rid of all those problems mentioned above. I f you decide to use Non-Microsoft products for any internet-based applications, your risk of running a compromised machines is reduced to an amazing extent.

All severe security holes related to trojan horses and viruses are Microsoft security holes. What does that tell us? I don't run a firewall, virus wall, trojan horse scanner or other crufty pieces of software and yet my system is secure. Wanna bet?

2748. Standard C558A Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-24 17:46:07 UTC
From: Jerry <fccgrant@yahoo.com>
Message-ID: <3C792885.A36D2A92@yahoo.com>
Source record: 46851

I have a C558A that has a problem on the 440 mhz side. The unit receives well and will transmit. I have the display light turned on. When I transmit 5W on 440, the display light will dim very noticably. This only happens when I use the rubber duck. If I use a mobile mount antenna, then it seems to work fine. I was thinking that I had a defective rubber duck antenna so I purchased another one with the same result.

I'm wondering if the finals are starting to go or if I possibly have a bad filter and that is why the problem only shows up using the rubber duck. Looking for any thoughts on this. Thanks.

If you learn to use Microsoft you end up with the same results.

> *All* severe security holes related to trojan horses and viruses are
> Microsoft security holes. What does that tell us? I don't run a firewall,
> virus wall, trojan horse scanner or other crufty pieces of software and yet
> my system is secure. Wanna bet?

So Peter doesn't run MS products due to its security issues. I suspect Peter walks (only when streets are deserted) and won't use motor vehicles because they are involved in so many accidents. Peter must not fly, airplanes are related to most air fatalities. No boats, you could drown. No sex, STDs and heart attacks. Peter should pull the plug on his computer, fire hazard!

MS products ROCK if you know how to use them. Oh, you wouldn't know, you don't. To each his own.

We were talking about these before here.
http://dimensional.com/~melissa/mrf138.htm

Some people are asking $75-125 each for them.

But we could use a new hard drive and some software for the house, so if I wanted to sell them fairly soon, how much could I reasonably expect to get for them? Maybe $50 each if someone takes the whole lot of them?

I've been told my fellow hams are too cheap when it comes to this kind of thing, but they're the ones most likely to build things with these, right?

That coax length is mostly myth. That coax length thing got started on the CB band, and I, for
one, don't put any faith in it. Just use whatever it takes to get from the rig to the antenna and
forget about it--as long as the length isn't some really LONG run. Resonate the antenna and
forget about the length.

Hi Guys;
Now this is an Antique Handbook. Its the RCA Tube Handbook, but the year escapes me, there are dates of 1943, 1938 & 46 printed here & there in the book. The leather-ette cover is marked HB-3, Vol. 1-2 but I have no idea if this is Correct because its very old! I do know that it measures 5"w x 7-1/2"h x 2"thick. Seems to cover all aspects of tubes ranging from RCA 00-A detector to 117Z-6-GT/G. Many receiving, Audio amp., etc. There are basing diagrams & much more info.
A great collector book from the RCA co. in NJ.
Here are a few pics, really is in nice shape for its age!>>

Hello Pete,
Yes I sure do! Morse Tutor Gold will do that and a lot more. While learning CW myself I tried several freeware - and - commercial CW software tutor programs. Morse Tutor Gold is the Cadillac of all of them IMHO. Here is the link to their homepage and from there you can order.

GGTE Amateur Radio Software
http://www.ggte.com/

It is also available through HRO outlets and the ARRL organization....good luck. Morse Tutor Gold took me well past 20wpm with great ease and flexibility in lesson structure....

Message-ID: <Xns91BF9AB7FDA26Frog207Junocom@148.78.248.76>
Source record: 46873

Assuming your antenna is approximately a 50 ohm feed point, and that your radio is a 50 ohm output, then ANY length of 50 ohm coax will work just fine. The only time the length can have an effect on antenna matching is when the antenna impedance is substantially off of 50 ohm. In that case, it is far better to tune the antenna for a proper match rather than play games with coax length.

Ed

>> I am installing a new Gap vertical antenna, covering 80m through 10m.
>> The actual amount of coax that I need is 60 feet. Somewhere way

[x] Crosspost and follow up to news.admin.net-abuse.usenet

Your provider has been notified about your constant abuse of usenet.
Constantly crossposting as default behaviour of your news-client is
unacceptable behaviour by usenet standards. This is clearly stated in your
provider's terms of use, which can be read here:

http://www.bnb-lp.com/terms_of_service.html

Explicitly the following two paragraphs should make things rather clear to
you:

"Sending a message to many different off-topic newsgroups (Cross Posting),
is particularly unacceptable and will be treated as inappropriate posting
which may result in account suspension or cancellation.. You agree to abide
by BnB's policies concerning use of BnB's Internet Services. BnB reserves
the right to suspend access to service for your account(s) upon an
indication of disallowed use."

and

"You agree to pay a fine of $500 for flagrant disregard of allowable use
policies including sending unsolicited commercial email, spam, or via
posting commercial messages to Usenet discussion groups whose charter does
not explicitly allow advertisements. You also agree to reimburse BnB for any
costs involved in dealing with such incidents. BnB staff time will be billed
at $ 50.00 per hour. It is at BnB's sole discretion what constitutes such
flagrant disregard of allowable use."

A formal complaint has already been filed with abuse@bnb-lp.com.

Hello Zoran,
Sorry but I have no pot to sell you. If I - did - have some I would be willing to share with you for free.

The idea of cross-posting IMHO is misunderstood by many. It is a very effective way to disseminate information while only needing to compose a single message. I have to disagree that cross-posting is never "justified". That is just your opinion.....

Some people when they see any message at all that is either not to their liking for content - or - posted to more than 1 newsgroup immediately put on their Spam Cop / Cross-Posting Marshall hats and lead a one-person crusade against the perceived "offender" Many times reply-after-reply get repeatedly cross-posted because the original addressed groups never get edited.....so at one time or another almost all Usenet users are "guilty" of the dreaded scourge of "cross-posting" and many do not even realize it.

Bob Dylan said it best I think..
" ....and don't criticize what you can't understand"

Now this is not directed at you Zoran personally..but at those type of people I have just mentioned

Might be able to lower the deviation. Many newer VHF rigs are very hot. My
FT-3000 was, until I eased the trimmer down.

Greetings All,

After reading the prior thread by Joe Mehaffey, RE: FT-100D vs IC706MKIIG
it brings a (sorta) related question to mind. I hope any in the know will
respond. I call it sorta related as a few weeks ago I was right where Joe is now
-- until I realized the ultimately Portability would take priority over Power
for my 2nd rig. Regarding the above thread I highly favor the post-June '01
FT-100D's but,... I am determined to have Portable as a more important than
Mobile. That makes using the FT-100D for over 1HR. or with a battery under
20Kg to be a pipe dream. Alas! So the (gulp) QRP rig, the FT-817 is, for me,
the top choice. It *is* a very cool-lookin' rig with great reviews, but this
will be my first foray into QRP. It's the fun factor and excellent multi-band
coverage of the FT-817 that grabs me, not any "philosophy" of QRP.
No offense to any QRPers intended, please.

Here's the bottom line: FT-817's seem to be getting " Yaesu Coupons" that
have the price down to 629.00US at Gigaparts -- But does this mean that this
is really being done just to clear stock in preparation for a "FT-817 D " or
such to be announced at DAYTON ??

Anyone heard any rumors? Should I be cautious or take advantage before the
Recession ends and prices rise ?? Your help/comments/advise would be much
appreciated, so please accept my thanks in advance.

Hmm, new in box, but it's been modded for "MARS/CAP"? Then it's not new in box, it it? :)

Anyway, it's hillarious that this radio went for $250 when it's sold for $150 new at AES! :)

>Would hate to make the investment
>and regrret it. Thanks
>

I've got it and I LOVE it. I added an Astatic 575 amplified mike to replace the stock mike. I use it mostly for SSB work and have made contacts up and down the west coast, into Canada and even overseas into the UK, France and Holland. I also made a contact the the west coast on FM with it as well. I get the full 10 watts out on FM/AM and close to 30 on SSB.

The only downside is the fact that there are no PL tones, so you may not be able to access local 6 meter repeaters.

Check out www.eham.net for more reviews of it.

Rob:

I would not choose 10 meters either. The band is dead a substantial part of the time so you won't know if your receiver project is working or not. I would also suggest a 40 meter receiver because it will pull in signals day and night.

How do you mean "first timer"? If you haven't built anything, you might want to start even simpler. Start by building simple little bits of test equipment, things that will be useful but are only one stage each. This will give you a chance to do some soldering. You won't have to worry about damaging expensive parts, and for most of these, you can get parts off scrap circuit boards and if you mess something up, just start again without having wasted money.

You'll need some sort of power supply, and they are relatively straightforward to build.

One of the most useful pieces of "test equipment" has always been an audio amplifier. Nothing complicated, just a 386 IC (like you'll find in a lot of receiver designs) in a box with it's own power supply and speaker. Then, whenever you need to check some sort of audio signal, you have an amplifier around to listen to it.

Build up some crystal oscillators. Way back when I started, the first few projects that I tried didn't work (and I never did get them to work) despite copying the parts list from the magazine and going down to the parts store. The first thing that did work, was a really simple crystal oscillator, using a transistor that I took off a scrap circuit board. Have some sort of socket, so you can plug in various crystals. If you happen to have the right frequencies, you can use them for testing a later receiver (ie use it as a really cheap signal generator).

Some sort of audio oscillator is always useful, for testing audio circuitry. I've tended to breadboard something when I've needed this sort of thing, but a few years back I finally built up a genuine "signal injector". The ARRL Handbook has a circuit or two. It's just an audio frequency multivibrator; since it's full of harmonics, you can use it for finding faulty stages in radio frequency circuits.

After that, or instead of that, you might want to build up a receiver putting each stage on a separate piece of circuit board. The audio amplifier here, the mixer there, etc. This again has the advantage that you can have some sort of results after just a bit of effort, and if you mess up a stage, you won't damage the whole thing. Years ago, there was a series of articles in QST along these lines. Build up the audio amplifier, then add a mixer stage, and an oscillator. There, you have a direct conversion receiver. Add a mixer and another oscillator, and you have a simple superheterodyne receiver. Add a filter, and the receiver gets better.

One of the greatest things invented has to be copper-clad circuit board. Yes, you can lay out a pattern and etch it, but it's really useful for breadboarding purposes. It gives you an easy to cut building material, and the copper, which is easy to solder to, gives you a really good ground surface. Whenever something is connected to ground, you solder to the circuit board, and then the rest of the circuitry sits above that. It is really easy to change if you make a mistake, or want to change something, or start all over.

Norton AV can only catch viruses after they have been out long enough to
be captured and analyzed - then a patch created. In the meantime, thousands
of PCs catch the bugs - and often don't know that they are there.

It, just like any other AV software, works "after the fact". It can only
prevent you against future occurances of the same attack.

And if you don't have the capability to scan all incoming files etc before
they are opened, then you are still vulnerable.

> Crume's book 'Inside Internet Security' advises that it is generally more

This is true for software/firmware that has been around for a while. It is
NOT true for relatively new releases. IE 6.x is still in diapers. It will
need many "fixes" before its holes are plugged as well as those in IE 4.x

Rob: Build a little CW transmitter first. Make some QSO's with it.
Do a Web Search for "Michigan Mighty Mite."

Then maybe a direct conversion receiver. But not for 10. Easier to
start out with something on 75 or 40.

Start building a tech library. And a stockpile of parts. And get a
simple multimeter. Arrange a good workspace.

Good luck! Have fun! Start out slow and don't take on anything too
complicated at first. Don't be afraid to ask for help when you get
stuck. We all get stuck from time to time.

Obsolete devices tent to be very expensive but this
does not mean that amateurs are likely to pay $100
for a 30 Watt transistor. There are easier
and less expensive ways of generating 30W.

> But we could use a new hard drive and some software for the house,

Buy a nice new hard drive and go to www.linux.org to see how
you can get lots of very good software for free.

> I've been told my fellow hams are too cheap when it comes to this kind of
> thing, but they're the ones most likely to build things with these, right?

The market will decide how much they are worth. You will
either have to accept the going rate or hold on to them
in the hope that you will get a better offer. I'm a keen
homebrewer and I certainly wouldn't pay 50, 25 or even
10 dollars for them. Sorry! that's probably not what
you wanted to hear.

Wrong (at least 80% wrong ?). From the Norton AntiVirus 2002 Help file for your education:

"All computer viruses fall into two groups:

Known viruses: <snip>

Unknown viruses: An unknown virus is one that does not yet have a virus definition. Norton AntiVirus includes an advanced heuristic technology called Bloodhound to detect unknown program and macro viruses. Bloodhound isolates and locates the various logical regions of a file and then analyzes the program logic for virus-like behavior. Bloodhound detects a very high percentage of unknown viruses. In addition, Norton AntiVirus detects unknown viruses by monitoring activity on your computer for behaviors that viruses typically perform. When a suspicious activity is detected, Norton AntiVirus prevents the action.

Copyright© 2000-2001 Symantec Corporation. All rights reserved." Fair Use - education.

> And if you don't have the capability to scan all incoming files etc
> before they are opened, then you are still vulnerable.

Wrong. That feature is called 'Autoprotect' and it is recommended that it be left in its default setting, ON. That is exactly what it does.

Reticulum,

I'm considering the purchase of an 817 as well, though I WANT a QRP rig :)

While it's true that rumors are just rumors, it does seem like the 817D
should be coming soon... The 817 has been for a while and there has been
quite a buzz about the little beauty. You would think Yaesu would be racing
to make improvements and get the latest and greatest out to the fans.

IF you hear anything more conclusive, I'd love to know... Since it may
drive me to hold off until after the new rig is out.

Thanks,

Hi,
I know exactly what you mean! It was the EM80 in *my* father's
radio in the late 1950s which made me want to know what it was and how
it worked, which got me into this whole electronics thing. :-)

Scott,

As silly as this might sound... use a cheap CB hand mic. You'd
be surprised at how well the Kenwood solid-state rigs respond to
your garden-variety CB mic. Some of the late model Radio Shack
mics have up/dn buttons that can be rewired to work with a Knwd
rig (I've done it several times over the years).

Try your local office supply store or a hardware store or a computer store. You just need a wall wart. They come in all sizes and capacities.

Or, you can get a little power supply with a variable voltage control.

Its a bit like buying a computer realy.
Do you wait untill the next model comes out?
Then what?
If the 'latest' model is what you strive for, then keep waiting!
You can never keep up with the 'latest' model.
If you want a value for money set to use then jump in
while the price is right!
Who the heck cares weather you are using a 'latest model'
or a set that was built years ago. The main thing is, your
on the air enjoying the company of fellow amateurs.

Hello Peter,
I couldn't agree more with that philosophy....also I find it my 7 yr old TS450S to still be extremely serviceable. I still have little trouble busting the biggest pileups. Of course an elevation of over 5400ft / 1800m helps a tad too I think....

Maybe catch you on the bands one of these days....

Sounds good to me. But if you like specs:
http://www.pennzoil.com/TechData/Pdsheet/DomesticMarketing/Gear&Transmission/pdf/ATF.pdf

lists the viscosity at a couple of temps, and flash point (>200c) and
dialectric strength.

Better yet wait until Dayton 2003 and they will have the 746 Pro for $1200
and a Free $200 Microphone. Or Better Yet there will be the 746 Pro II and
all that paid a fair price for the regular pro last year have a radio worth
$900 on the used market and that only if the serial number is 200 higher
than the one you own. The Japanese manufacturers are hosing us. and we are
just standing by. I for one have bought my last Rice Box.
Sorry for the Soapbox Speech.
Murray hope you find one soon.

Source record: 46838

Doesn't leave much besides Ten-Tec does it? Not that Ten-Tec is not a good radio. I am curious as to how the Japanese are hosing us? They provide radios of unbelievable value compared to what we had only a few years ago. I paid $1,040 for an Icom IC-745 in 1984. Adjust that with the Consumer Price Index and you have $1,763 in today's dollars. A new IC-746 is currently $1,300. Which would you rather have? I sold the IC-745 a few months ago for $500. I lost 52% of its value, but I got to use it free from defects for over 17 years. How is your 17 year-old car holding up in resale value? How about a 17 year-old computer? Or a 17 year-old TV set?

When you buy something (anything) you pay for perceived value to you. If you thought it was too much money for the product at the time of purchase you (hopefully) wouldn't buy it. You can't be constantly worried about what Joe next door paid, or what Harold paid at the local swap meet. Or even what it might be worth if you sold it five years from now. Buy the radio and enjoy it. If Japan stops producing amateur radios, we will be in a world of hurt. They are the only ones (with one or two exceptions) who are willing to absorb the development costs, and have a low enough manufacturing cost to give us amateur radio equipment at prices we can afford.

Well, you might enjoy this response from Yaesu to a (very)
obvious fishing expedition on my part. Have a chuckle !

Greetings,

Dear Yaesu, I think your products are the best ! I really like the FT-817
especially.
But I keep asking, "When will Yaesu bring out a newer version ?"

Can't you please tell me if a newer version of FT-817 is coming out soon ?
I hope to be at the Dayton, Ohio Ham- Convention. Will there be any news there
about one ?

Please, respond as I value your company and products very much.

Thanks from KG4JBM / Andrew

Here is a one month old Radio Shack PRO-2067 500 channel MULTI-SYSTEM trnking mobile scanner. I took it out of the box plugged it into power for a few hours and returned it to its box. This is a moble scanner, and comes complete with all the mounting hardware, box manual, mounting bracket. Never been installed. Looks 100% works the same. Sells new at Radio Shack for $249.99. Make offer, or what you have to trade. Thanks Patrick K8CMA. k8cma@arrl.net

2842. Re: Want to buy ICOM 746 Pro

Source record: 46846

Dick:
I appreciate your thoughts but cars and TV's have totally different values to most folks. At least Ten Tec doesn't reduce the cost of a radio. Once a fair market price is decided the don't reduce the price 30% once the initial sales rush is over. I contend that you are rare in that the used value of your equipment is not important. I believe most hams are extremely conscious of the value of their equipment. The only Japanese radio company hat has held values of their radios is Kenwood. Hams have just about put them out of business. Hams just like to buy cheap and sell high. Kenwood is the only company that keeps a model in the line for a period of time and not change models. Icom and Yeasu have different philosophies on marketing but both play games with retail prices that keep the "Value" in constant flux. I believe that we do get a lot of value in some of the new radios. Your example of the 746 is not a good one. These radios sold for $1800 for the fist year of existence. within a year they could be purchased at Dayton for $1250. They are less than $1200 now. Two friends bought new ones from Ham radio outlet in Atlanta for $1150 before the Pro was announce. Try to market your 746 you bought early on for $1800 and the first 30 replies want to know the serial number and completely go neutral once you tell them its an early serial number. I believe the 746 pro will be a repeat and once the radio manufacturers delete the initial demand the games begin. 746 pros will lose 30% of their value in the next year. I contend that this does bother our fellow brethren. We apparently just have a different opinion.
Thanks Dick for your thoughts but as far as I am concerned this thread is over.
73 and enjoy your 746. I had one and thought it a fine radio. Sold it before they cleared them out for $900.

And if you spill it, it's a real fire hazard. I use lots of it in paint.
We don't use the stuff in buildings with open flames...Like my shop.
As to the spark and vapor/explosion...there is a difference between an
explosion and fire hazard. Also the concentration really determins the
flame hazard...Me?..I'd not use the stuff in a dummy load...The viscosity is
low and it does burn real nice. <:-)) However, to each his own... It would
do a good job of conducting the heat away from the resistor...If the risk
doesn't bother you, then go for it. I cross Lake Michigan a good many times
a year in a single engine plane where a lot of guys won't even make
approaches over water. It's just what ever you are comfortable with.

BTW, running a full KW I can heat a gallon of the stuff in short order.

Kantronics KPC3 Plus ver 8.3 Garmin GPS III Plus
Garmen GPS mag mount auto antenna
Garmin Power/Data cable wire for the KPC 3 with a DB-25
Plug and run portable package like new.
I(did loose the GPS-III manual but you can get it off the Garmin website in PDF format.
The reserve and buy it now price is 500.00
If you add up all the goodies including the garmin antenna and cables thats really a good deal.
Cashiers check or money order only.
add 15.00 for shipping in the lower 48 only.
Im selling because I really dont have enough time to start another sub hobby (Shhh! Hush Hush! My wife told me that) Besides we will be moving soon and I want to clean out the stuff im not using. So I can collect from scratch.
(The words of a real Ham, lol/HiHi!)
Wired and ready to plug and run.

As long as people don't insist on using those bloody power mikes.
There are some rigs out there that sound as bad as some of the old CB's
did.

2850. TH-F7 or VX-5R?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-26 09:44:41 UTC
From: Ben <bloggs@bloggs.com>

Hi All

I'm new to amateur radio, and am obtaining my Foundation licence soon. I want to start with a hand-held, for use in the UK and Switzerland. I expect to use repeaters often.

I want a very small unit, and am trying to decide between the Kenwood TH-F7 or the Yeasu VX-5R. May I ask a few questions:

1) Is it possible to modify the VX-5R to be compatible with PMR446? I understand the Kenwood can be, but the frequency stepping is wrong on the VX-5R?

2) Is there any other (5W or higher) compact hand-held to consider - preferably that could be used with PMR446?

3) Will the hand-held to hand-held range be similar between the two models at the same power in the same conditions?

4) Can either be modified to transmit on the CB frequencies (I have a licence)?

5) Realistically how useful is the 6m band on the Yeasu?

6) Any other comments on the two units, preferably from somebody who has both.

I have read loads of online reviews so have a vague idea. It seems that the VX-5R is generally better unit but I really want back-compatibility with PMR446 (I am aware there are licence complications here)

Thanks in advance

Ben

Adjustable speed selection from two to 99 WPM. A few 4 x 6 cheat sheets for "Quick Starting Hints" 8,000 Characters of memory that can be stored in 20 memories (36,500 with 32K Ram) Training system that allows random code group practice at a steadily increasing speed, random four-letter word generator and a QSO simulator. Automatic serial number insertion and incrementing in any memory message for the serious contester. Six programmable modes of operation: Keyer/Memory Send: Beacon (to automatically repeat a Morse or RS-232 ASCII message at a programmed interval of one to 999 seconds). Memory Load, Trainer, Morse Terminal and QSO Simulator. RS-232 computer compatibility enabling operations from your computer, including displaying practice sessions on your screen. RS-232 cabling included (25 Pin). Power Supply included.
I am the original owner and the Keyer has been in a non smoking environment. Very clean, no marks or scratches, nor modifications. Also includes box, schematic, and MM-3 Trainer Answer Book. (Teachers aid.) The directions are on the top of the unit permanently attached by the manufacture AEA.
Sorry for the additional supplement to my listing but I forgot to mention that I have the Owners Manuel, sixty eight pages of detailed instructions, which will be also included.

Check it out..

Sam, N3NFK

[snip questions about modifying handhelds]

A foundation licence only allows you to use unmodified commercial kit, so
the answer to your questions is:

"It doesn't matter, you can't use it with your licence".

C'mon! It's in paint! It's similar (actually less volatile) than
kerosene or lamp oil used in heaters. I know it can be kicked over by
a cow and burn down Chicago, but it's heated and lighted homes for
years. Lots of restaurants have oil lamps on their tables instead of
candles.

It will make no difference if you purchase a modified set, your licence
still wont allow use on frequencies other than Amateur.

2865. Syntor Max Mic Cable Length?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-26 13:18:53 UTC
From: courir26@yahoo.com
Message-ID: <a0dd5fc9.0202260518.1ecc6cac@posting.google.com>
Source record: 46769

Hi,

I use a Syntor VHF for a base radio.

I'll be installing the radio in a new location, and need to run a remote mic/speaker. The mic is a Mot base mic.

Q: What is the max mic cable length I can run before needing a mic amp?

I might need 50' for the planned installation.

It presently works OK on 15' or so.

It's not me with that attitude! I have no intention of being illegal in any way. It just want some straight answers to some simple questions - some of which have nothing to do with licence restrictions.

Regards

Ben

Hi Ben,

I own both sets and they are both good in their own ways, but I think I just prefer the Kenwood.

Both sets suffer from intermodulation (especially on 2m from Pagers) but the Kenwood has a switchable attenuator which helps quite a lot. The VX-5 short-wave coverage is not great, only up to 16 MHz which is a drawback for me. The Kenwood has wonderful coverage, 0.1 to 1300 MHz, with SSB available up to 470 MHz, and it also has reasonable AM bandwidth-the VX-5 has much too wide filters for use on the HF bands. The Kenwood also has a built in ferrite bar aerial which improves low frequency reception-a bit!

I use 6m quite often with the VX-5. The standard rubber duck is a poor performer on 6m on the VX-5, although I can use it where I live but I use an aftermarket Diamond SMA connector aerial which gives quite an improvement. I miss having the extra band on the Kenwood-they should have made 6m available to make up for the loss of 220 MHz from the European version.

Both have great battery life-but that's what you expect with Lithium batteries. The Kenwood takes longer to charge though, but lasts the longest.

I had big problems with my first two VX-5s-eventually the dealer replaced the faulty sets with a new "Silver" version (just a colour change). The problem was poor CTCSS decode, which affected early models mostly, but some of the new sets have it too. The Kenwood is free from any problems as far as I can tell. I think the VX-5 is showing its age a bit by the way.

The Kenwood has have the necessary 6.25 kHz steps to allow you to use the set to listen
on the 446 licence free band. The Yaesu doesn't have 6.25 kHz steps, so it's not usable.
I haven't modded either of my sets as there's no point me doing so. Neither set will work
on transmit on CB bands, though you can listen to them with the Kenwood.

Both sets produce 5 Watts, so there won't be any difference in range between them. I find the standard Kenwood aerial a bit better than the Yaesu.

Accessories are, as usual, hugely expensive for both sets but it's possible to get round this with generic equipment. Both sets will rapidly lose the lettering on their buttons without a protective case by the way.

I'll probably be selling my VX-5 soon, as I need some cash towards a new Kenwood TS-2000!

73.

Boat,

Thanks for the post... As someone who works in IT for a living, I totally understand that mindset.

Nonetheless, if I have to buy a server, I'd prefer to get an 'upgrade' of our considered model if it's close in coming. For example, last year we bought a machine with PIII1.2s only to have our vendor introduce PIII1.5s in the same product the next month. And at that point they lowered the price (substantially) on the model we had just payed full-pop for.

Now I am not griping over this... It's life. But I sure wouldn't mind having a Crystal Ball.
That's all.

Thnx,
Dluxe

The Kenwood has have the necessary 6.25 kHz steps to allow you to use the
set to listen
on the 446 licence free band. The Yaesu doesn't have 6.25 kHz steps, so it's
not usable.

==========

The VX5 may not have 6.25kHz steps, but you most certainly can use it for
listening to PMR 446. My VX5 works flawlessly for receive on that band.

2871. Re: Want to buy ICOM 746 Pro

Well, I will give it one more shot. I have been building, buying, selling and trading ham equipment for as long as you have been living. I have also purchased Icom's since their first crystal-controlled 2-meter radio. So I think I have more than a passing knowledge of how Icom markets their equipment. And as a b-school grad, and former director/plant manager/GM of several, large electronic companies, I think I have a grasp of retail and wholesale pricing and marketing philosophies.

As a ham,unless you just woke from a coma, you already know that the original price of Icom equipment is higher than you will be able to get it for if you wait for a while. I still think my example of the 745/746 is valid. I didn't buy the 745 at the original price, and I paid $1,300 for my 746 because I waited for a while. Like the 745, I don't think I will have any problem selling the 746 for $675 to regain the same percentage of my original investment. There are also examples of Icom radios that have gone UP in price, not down.

Those early adopters, and people who can afford it anyway, will always buy as soon as the new model comes out. They don't care that others will buy the same radio for less later on. The rest of us are smart enough to wait. I can remember not too many years ago that I paid over $500 for 16 megs of ram for a computer I was building. I knew if I waited the price would come down, but I needed 16 megs. When 256 megs of SDRAM was selling recently for $28, did I moan that Micron was screwing the world? Of course not.

Refusing to buy Japanese radios simply because the price varies over time is a classic case of cutting off your nose to spite your face. But, it's your money and your choice, so you stick with Ten-Tec and I will stick with Icom and we'll both be happy.

Leaving the soapbox now.

What a ham spirit, nagging about what is legal ore not
The upcomming A-class licencee wants to have some info about equipment,
not a legal discussion.

Charles,

It's not necessarily an "abortion". This radio is perfect for CAP,for example, because of the
CR502 which makes it it NTIA compliant.

Try Ten Tec. Go to http://www.tentec.com/Amateur.htm and click on their "kit selector." They have a number of transceiver and receiver kits. You might want to start with something for 20 or 40 meters, just to be on bands that have a decent amount of activity, and will still be populated when the current sunspot cycle fades down.

Have fun!

I used to write product brochures for Compaq, and the brand managers there always talked about their price "delta." Early in a model's life cyle, they charged full price, but later, at the end of it's life cycle, when the technology was no longer new, the model went for a fraction of the original cost.

Nothing revolutionary about that. And I, for one, am glad to see the current offshore ham manufacturers employing agressive marketing/price strategies. If Hallicrafters, Drake, National, Collins, Gonset, etcetera had done the same, they might still be around today.

Personally, I'm happy that the Icom 735 I bought for $850 in 1984 is still worth about $400-450, not that I plan to sell it anytime soon.

Thank you for all the useful feedback. How long (roughly) does the TH-F7 take to charge and can you use it while it's charging?

I think you've sold me on the TH-F7, oh well there goes £260 (unless you know anywhere cheaper in the UK!?)

Thanks

Ben

Yes, and that paint says do not use near an open flame, or in a room with a
heater that uses an open flame.

Sure it's in paint and it's still flamable.

I bought a TS-930S from a sincere fellow who was peddling it on behalf of
an sk's family. He's pooping out on help so maybe somebody here has some
ideas.

From notes in the manual and tracks inside the radio, it appears there
was a full compliment of filters that have been pulled out. Things were
restored ok on the
two CW filters but the AM filter position apparently needs to have a
plug-in shunt of some kind. Is that right or is it simpler?

Anyway, that's the only explanation I can guess at for why the AM mode rx
doesn't work. Dead, silent.

In addition, the S-meter does not respond to signals when you tune
across a busy band (in any mode) and pins when the RF gain is set to
minimum. Could this be a result of the missing AM shunt?

I'm at a loss. If you know about 930s, sure would appreciate your input.

Bill

There is a plug-in board that goes in the AM spot. Won't work wothout it.
That is the s-meter problem. Does the radio receive, you didn't say.
Probably not. Check R400 on the main unit and see if it's open..

Perhaps what he meant was, if you were to accidently hit the ptt button
while tuned to this frequency, would it transmit? Knowing that could
prevent possible unintentional illegal transmissions.

In the manual it says that an "empty" Li-Ion battery pack takes 6.5 hours to recharge. I have just recharged mine in about 5 hours. It takes longer to recharge the Kernwood battery pack as it is almost twice the capacity of the Yaesu.

I don't know of anywhere inthe UK where you can buy the TH-F7E cheaper-I paid £269 from Waters and Stanton but you might be able to get it a bit cheaper in Europe, but I haven't investigated this option.

Let me know if and when you get the set-I like mine, but as I said initially, they are both good in their own ways.

S-meter "pinning" at minimum RF gain is normal. As for the S-meter not working - stupid question: is your AGC off?

Zoran.

AGC on/off has no effect.

From other feedback, the missing plug-in board is the culprit. If I can find one of those, the rest should fall into place. Of course, I *could* just buy a filter, but didn't want to spend $50 - $85 on a little used mode.

Thanks,

Bill

Well in a sense, when you use EZ-DomainNameRegistration.com you are using GoDaddy. EZ is just a reseller of
GoDaddy. He just marks everything up by $3.00 or so. Go to www.godaddy.com and you can get the EXACT same
thing for a few bucks less.

Bill,
The missing dummy filter is the culprit in AM mode. It's a plug-in board with an IF transformer. If R400 is open, you will get no receive and the S meter will peg to the left. (no -12 volts) Pegging to the right with the RF gain turned down is normal.
It seems the S meter is capable of following the AGC. It's possible the filter path is not selected properly and receive levels are too low to develop AGC. Be sure all diodes which were cut when filters were installed are restored. There is a jumper which is installed on one of the 455 khz filter connectors when there is no filter installed. I'm assuming you're saying the S meter doesn't work in any mode. If it's only in AM mode, the dummy filter is all you need.
Let me know where you're located.

People pay more than they should for things all the time, be it eBay or somewhere else. I have bought and sold items all
the time on eBay and every transaction has been good. I always look at the ratings of the sellers and buyers to make
sure they have a track record of honesty. I know what something is worth and I know what it is worth to me and I bid
accordingly.

I think providing credit card numbers and checking account numbers to verify that you are who you say you are is just
one way that eBay does some basic checking on individuals. Second, I don't mind providing these numbers to Billpoint
(eBay Payments) or Paypal to pay for items to to accept payment for items. Both of those services are great and make
the transaction go much quicker and smoother.

Yes it is not perfect, and yes people will be taken advantage of (or allow themselves to be taken advantage of by not
doing their homework on the value of an item), but it seems to work for a majority of people. I can find items on eBay
that I cannot find anywhere else.

Having been to a lot of HR flea markets, at least eBay gives you some protection. The flea market gives you no
protection. Having been to Dayton over and over, I would say what people want in the flea market for their junk, is far
more than what you can buy it for on eBay.

Greg,

Thanks for filling in some blanks. Clif basically said "No filter or board = no AM" and that confirms my hunch. I can't for the life of me find R400 but so much of the rest of the radio is working, I figure it's ok.

All of the filters appear to have been restored properly ... except for the AM one. D91, cut for the 8.8 mhz IF CW filter, has been resoldered, and the jumper was replaced for the 455 khz IF CW filter.

So, the s-meter doesn't "s-meter" in any mode, but can be biased from zero to pinned by adjusting the RF gain. The position of the AGC has no effect.

I'm in Eureka, Northern CA.

Thanks for helping pin this down. My next move is try and fine a surplus plug-in board somewhere.

Bill

Source record: 46720

Paul,

I have an FT-817 which I bought for business travel.
I also have a Geo Tracker ... but haven't used the
'817 mobile in that vehicle, except on 2m/70cm FM
because I haven't yet installed an HF antenna on the
Tracker.

For what it's worth, the QST product review
on the 817 specifically stated "There's a noise
blanker that really works. Great!"

Let me know how you make out with the noise in
the Tracker if you would ... you might try resistor
plugs and a new set of resistive spark plug wires
if the plugs and wires are older and not in the best
shape.

First let me tell you I am trying to do this as cheap as possible. I bought a little dig camera the other day, and I have really enjoyed taking pics with it,,, but , (there is always a but), I have to buy a battery for it about every 85 pictures. It is a 123 3 volt lithium battery ,pilelithium. And they cost about two for 11$. What I would like to do is 'rig' up a power source, maybe 12 or 6 volts and then 'divide' it down to the needs of the camera. A while back I 'had' something , kind of like a wall wart except it had varibale voltages , and you could 'swap' the positive and negtive poles. I have a couple of 'mixed' ideas, but hope you can clarify what I need. I hope you can 'see' what I am trying to say. hihi. thanks in advance. cl. 73

You can't legitimately use an amateur set for transmitting om PMR446,
as although PMR446 is licence free, the sets have to meet certain
specs, which include the fact that the aerial must not be removable.
Sorry.

Hmm, if he resells Godaddy.com, then what shows up when you go to
administer your domains?
I deal with Godaddy directly, and I can change where my domains point at
any time.
There are some registrars that do a bit more for you, but they charge extra
for that service. They just don't tell you about that.

I've heard there were some slight differences in units and not all bodies
are
compatible with all heads. I think by the time the 599 came out the
firmware
was pretty 'locked down' and they were swappable though.

2936. YAESU FT-8100R VHF audio/tx problem ???

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-27 13:55:42 UTC
From: Keith Leite <Keith.Leite@GDGSC.com>
Message-ID: <Gs72qq.G71@wlbr.to.gd-es.com>
Source record: 46650

Greetings,

I have owned my FT-8100R for a few years now and have noticed that the
UHF (2mtr) side of the radio is acting weird. I can turn the volume control
basically "OFF" and still hear audio coming through almost like the volume
control is not working. Also the output audio on the 2 mtr side will get
very
load sometimes and you can turn the volume down.

Also sometimes when I transmit @ HIGH pwr the screen will go crazy it looks
like all "greek" characters. Once I reset the radio it goes back to normal.

Has anyone out their experienced any similiar problems with their FT-8100R ?

If so is their any quick fix ????

Thanks Keith, AA1JF

Items are located in Akron, Oh area and must be picked up locally. Lot's of circuit boards, components, some small tubes, older solid state and tube manuals and books, wire and cable and a few boxes of misc stuff. A good truck load. My father acquired these at hamfests over the years. For sale to best offer. Must be removed by March 9. I have no detailed inventory and no asking price. Will just be sold to highest offer or scrapped if no offers. Contact me for more information.

2941. FS: Optoelectronics Xplorer Nearfield Receiver w/DB32 Antenna Reduced $520 shipped.

Judging by what I've seen around the 'net I originally overpriced this, so I'm re-issuing it at a reduced rate.

I have for sale one Optoelectronics Xplorer Nearfield Receiver. Unit is in excellent condition and has seen little use. Will include Opto DB32 "stub" antenna. With original box, manual, telescoping whip antenna, PC download cable, software, and AC adapter. This is the newer Xplorer that also decodes LTR trunking ID's. It is cellular blocked. Battery pack is in excellent condition.

Reason for selling: Seeing virtually no use, liquidating for other radio purchases.

Price: $520.00 shipped UPS ground US only.

Payment Method: Pre-pay with U.S. POSTAL SERVICE MONEY ORDER ONLY!!! No substitutions, please!

Upon receipt of US Postal Service money order I will ship unit to you and will contact you with UPS tracking number.

For more information about this device, please click on the link below. Please contact me via e-mail if interested.

http://www.optoelectronics.com/xplorer.htm

Thanks for reading.

Scan Cape Cod
http://www.scancapecod.net

2942. FS: PRO-2004/HB232 package Reduced to $260.00 shipped.

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-27 16:55:29 UTC
From: kc1ua@scancapecod.net
Message-ID: <9b093b3c.0202270855.294f88c@posting.google.com>
Source record: 46746
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.swap

Greetings,

I can't move this package, so I've reduced the price to $260 shipped.

I have a Realistic PRO-2004 scanner for sale. The following info describes it's condition, modifications, accompanying HB232 Interface, included items, and payment method. Photos of the package are available through the link at the bottom of this message. If you are interested after reading this long-winded message, please contact me at kc1ua@scancapecod.net. Thanks.

Condition
---
1. Case is in good condition. Some minor scratches. Top of case has tape marks from a
2. Display is in good shape. Not as bright as day #1 but doing well.
3. An analog signal meter has been mounted on the lower left front of the radio. This eliminates the earphone jack.
4. A blue keypad overlay has been placed over the original yellow keypad. This overlay shows a 400 channel plan instead of the 300 on the original yellow.
5. Radio does use a 9 volt battery as memory backup. Care must be taken to replace this battery. I would recommend twice a year.

Modifications
---
1. Full coverage restoration.
2. Removal of power transformer to reduce heat issues, facilitate HB-232 interface components, as well as toggle switches mentioned in #4 mod below.
3. 300 to 400 channel modification.
4. Modification that creates 64 independent "banks" of 400 channels each. Controlled by toggle switches on rear of radio. Diagram for operation is included. It is not possible to scan across these banks, but 64 different configurations are possible.
5. Pushbutton switch on back of radio defeats keypad beep.
6. Discriminator tap (RCA jack).
7. Analog S-Meter mounted on front lower left. Eliminates earphone jack.
8. Radio did have problems with cold solder joints, which is common in this radio. They have been repaired.

HB-232 (a.k.a CE-232) Interface
---
1. Allows for computer control of PRO-2004 through supplied DOS

software. Demo of Windows software is available for download from www.steaksandwich.com.
2. HB-232 Interface is mounted in a project box, 8" wide, 6" deep, and 3" high. Short DB25 connection from box to rear of PRO-2004. DB-9 connection from interface box to computer.
3. Supplied software is able to program radio and will display a "virtual" panel that controls radio's functions. Again, it is DOS based software. I would primarily recommend using it for programming/backup of memory banks. Many scripts that can make the HB-232 perform various functions are included.
4. It IS NOT imperative that you use this interface. The radio operates just fine standalone. However, it is included as part of the package for obvious reasons.

Included Items
---
1. Original manual.
2. Service manual.
3. Power supply is NOT included. You will need a 12V positive tip wall wort type supply. I would recommend one that handles about 1 AMP just to be on the safe side. I was powering the radio from a 12V power system in my shack. Transformer was removed as outlined above, so this radio DOES NOT have 120 VAC capability. Radio did not come with a wall wort type supply.
4. HB232 software and scripts on disk.
5. My e-mail support for your first days of operating this radio! I won't disappear on you.

Payment Method
---
1. $260. Will ship UPS Ground USA only on receipt of US POSTAL MONEY ORDER ONLY!
2. Shipping and insurance included in asking price.
3. I will provide you with a UPS tracking number when the radio is enroute.
4. Reason for selling - I am simply not using this setup any longer. It is sitting here doing nothing.

This is a unique setup. I would not recommend this setup for anyone looking for their first scanner, but the radio works fine as a standalone unit and/or with the HB-232 interface. Please contact me if you have any questions. Photos of the package are available at the link below.

What I have done for a video camera , and will do for a battery eating digital camera, is: buy a 6volt "gel cell" battery at Academy Sports. It is made for a deer feeder. It is a bit larger than a pack of cigarettes. six volts at 4 amps. that's 4000ma. I think the 6v one is about $12 and the 12v one about $16 (and more amps). Put a 7805 regulator chip---- about a dollar at radio shack. then put a diode or two in line with the output of the 7805 chip. you will get 0.6volt drop for each diode. That will get your voltage where you need it with minimum of parts. and it's regulated rocksolid. if your camera doesn;t have a jack for voltage, then I get a used original battery and take out the cells and keep the framework of its case, and hook up about 5 foot long wires to the plus and minus terminals . Keep the battery in your pocket or a camera case on your belt. It won't go dead for weeks, and you can recharge it. Wn5i

2947. Tuner Wanted

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-27 19:18:36 UTC
From: Max Donoghue <mdonoghue1@sympatico.ca>
Message-ID: <u7qc7thv588t85@corp.supernews.com>
Source record: 46652

I am looking for a small external tuner such as the MFJ 901B, 945, or similar. If you have one you would like to sell, please e-mail me direct.

Thanks,

Max ve3tmt@rac.ca

2948. Alinco DJ-G5 deviation adjustment

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-27 19:30:58 UTC
From: Leon Heller <leon_heller@hotmail.com>
Message-ID: <a5jc5i$3u2$1@helle.btinternet.com>
Source record: 46653

I'd like to adjust the Tx and Rx deviation on my DJ-G5, for the narrower channel spacing (12.5 kHz) we now use on repeaters here in the UK. Does anyone know where the controls are, inside the unit. I seem to have problems downloading the service manual from the Alinco web site.

73, Leon

I am an electronics technology student at the local tech center and am looking to buy some broken gear for repair or for parts to get some hands-on practical experience. (Radio, Power Supply, Test Equipment, etc.) Email me with anything you might want to sell and maybe we can come to an agreement on price. (Don’t offer anything very expensive because I have very limited funds here, HI HI) Reply to Xrecho@eminem2000.com TNX. Respectfully, Justin

Hi,

If you know where I can get a manual for the Gould Biomation K100-D Logic Analyzer, this would be greatly appreciated.

If you don't have a manual, but know how to setup triggers on the analyzer, then this would be just as useful!

Tnx in advance
(reply to eric.everton@cae.com)

I have seen the ones on eBay, I was hoping for a private sale. I am in
Ontario, anyone?? Doesn't need to be pretty just functional.

Max

Yes, I know I'm not a regular here. But I'm going to be getting rid of some old Heathkit test equipment, and since there's no Heathkit group, I figured this was the best place to let people know. If this isn't appropriate to post here, please let me know, and I won't do it again.

This item has served me faithfully for almost 25 years, but for a variety of reasons, I need to dispense with many of my Heathkit items. Please read the ebay ad for more information.

David Erbas-White

I have a TL-922 that is acting like something in the power supply has gone south. Thinking either the bleaders or the caps. The HV only goes to a couple of hundered volts and sounds like something is crackleling...

Any ideas? or.. Does anyone know what caps and how many are in the amp?

Thanks
Brad

>under two bucks, pretty reasonable.

That's pretty close to retail around here; just a hair over $20 for
the charger, and 1600mAh AA or AAAs are $10/4-pack. C & Ds are a bit
pricier, but still well worth it for the radios that use them.

IIRC, the charger comes with coupons good for about $5-10 off
subsequent battery purchases.

I'm a real big fan of not dumping several pounds of extra trash into
the landfills, so I only use alkalines where they actually do some
good. (i.e. flashlights and emergency kits, where self-discharge is a
potentially serious problem)

It also allows me to experiment with toys like this one:

2979. Serious Buyers Only.... Michigan

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-28 15:32:03 UTC
From: John P Vassel <john@vassel.net>
Message-ID: <3c7e4d72$0$98142$2c3e98f8@news.voyager.net>
Source record: 46684

I have for sale some Heathkit Equipment.
It was all set up as functioning in a recent SK's home.
I prefer to sell it as a unit, but will consider parting it out only if
all pieces get spoken for.
So, feel free to give me a FAIR offer on all or parts of it.
I will then contact the appropriate buyer(s)
Thanks.

Equipment is as follows

SB401 HF Transmitter

SB303 HF Reciever

SB610 Output Analyzer o-scope

SB620 Output Analyzer 0-scope

SB650 Frequency Counter

SB600 External Speaker

HM102 High Power SWR Bridge/watt meter

HM2102 Medium Power SWR Bridge/watt meter.

An older, yet rather interesting looking microphone wired for the set.

Since shipping this stuff would be silly and expensive, I'll entertain
offers from those within a reasonable commute. I'm in central michigan.
This equipment is an 8+ on Physical appearance. I do not posess the
priveleges to test it, nor do I have the space to set it up.
It did work before being taken down, but since I prefer to do this as a
face-to-face deal, I will consider returns if something is blatantly wrong
with it.
Again, a heathkit fan will appreciate this equipment, and for those who
intend to throw ridiculous offers out.. please keep them out of my
mailbox.
I am open to offers, but this equipment is not needing to be sold
immediately, so lets make them fair.
Thanks for the time

I also have gotten great tech support from Kenwood - both - on email
and in real-time over the phone.

I also had a warranty claim on my then new TS450S/AT after I owned it
about 6 months.
I sent the rig to Kenwood and it was repaired and back in service in 6
days and at no charge to me except for one-way shipping to get it to
them.

2989. Repairing a faulty power supply

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-28 21:19:54 UTC
From: jb <jmb_tramonto@yahoo.com>
Message-ID: <Gs9Hx5.LEw@news.boeing.com>
Source record: 46697

Wondering if anyone has an idea what could be wrong with my MFJ Power Supply. I forget the model number off the top of my head, but it is roughly a 25 amp model that I think is bridge rectified. The problem is that instead of 12 volts output, it is now putting out approximately 24 volts which obviously wreaks havoc with my electronics.

Any ideas on what might be wrong?

2990. Wanted Atlas Articles from Ham Radio Magazines (See list below)

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-28 21:20:10 UTC
From: Frank Krozel <frank@electronicinstrument.com>

2992. Kenwood support - GREAT

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-28 21:31:37 UTC
From: Frank Krozel <frank@electronicinstrument.com>
Message-ID: <a5m0jejft1@slb5.atl.mindspring.net>
Source record: 46693

I just called Kenwood and asked them a tech question. The fellow I talked to stated I should e-mail the request to them, and he would forward to the tech.
I thought it would get lost in the chase, but.... about 20 minutes later, I got my answer.
Bravo - Kenwood!
Frank Krozel, KG9H

2993. Anybody else have VX-5 Troubles?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-28 21:35:09 UTC
From: Screaming Skull <KG4IVT@hot.mail.spicedmeat.sucks.leave.me.alone.com>
Message-ID: <hoxf8.8$0S4.23796@typhoon.southeast.rr.com>
Source record: 46548

A few months ago, I discovered that my VX-5 had stopped transmitting on 2m. I sent it off in January and got a call today from Yaesu. $200 to fix the RF module which was "shorted out". I don't have the money for this right now so it is coming back here which will cost me $35. Has anyone else had a similar problem with these radios and if so did it cost you this much to get it fixed? Hell, for that much I think I will save my money and go get the silver one.

Thanks!

2994. Re: Anybody else have VX-5 Troubles?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-28 21:49:15 UTC
From: Bill Clarke <w2blc@despammed.com>
Message-ID: <3c7ea357_2@corp.newsgroups.com>
Source record: 46549

For that price - I'd replace it with something new and without the Yaesu name on it. The loss will smart, but you can still use it as a handheld scanner.

I have a VX-5 and have never gotten to be friends with it. 2020 hindsight says I should have just gotten something for 2-meters only - without all the bells and whistles.

My 2 cents worth

This unit covers 100 Hz-1.8 GHz, includes a built-in signal counter with
1E-9/day timebase, and is guaranteed fully operational. Great for IMD
measurement, harmonic and spur evaluation, FCC pre-submission testing,
synthesizer noise characterization, and impressing visitors to your lab
or ham shack.

No reserve, starting bid $1.00.

YIKES!!! I'm guessing there's no Over Voltage Protect on it.. I'd be bummin' big time. Any power supply worth hooking up to any thing of value should have OVP! Lots of ways the regulator can give up and pass the full rectified voltage onto the output. Is this another MFJ Flame?

'73 KI4Z

David,

First thing you need to know is, if you're going to post an ebay or other auction ad here, you need to preface the header with FA: and not FS: or you will draw a lot of flack.

Take care, and stay well.

I had a commercial printery in town make a bunch of high-quality
copies of an original Cushman CE-31 owner's manual, since it was so hard to
find a manual in the first place. So, I have ten copies available on a
first-come, first-served basis. These copies are of good enough quality to
make additional copies from the copy you buy. Price is $15 US plus $3.40 for
mailing via Priority Mail. If you want one, email me and I'll get you a
mailing address, and I'm on QRZ.com with correct addy too.

Want to buy a used but in VERY good to EXCELLENT condition faceplate assembly for an older PRO-48 crystal scanner by RadShack.Will also consider one from a PRO-47 (will work but PREFER the 48 one.)
Will also consider buying entire NON-WORKING PRO-48 with good to A-1 cosmetics if you have one that's broken.
Please Email me directly with what you have and price in first Email. ALL replies answered.
Many Thanks for any help U can provide !

I have the following scanners for sale...

1.) Regency Z-10 professionally converted from 10 to 30 channels with beep-delete and audio enhancement mod.Radio is a SOLID 9 out of 10 both cosmetically and functionally, and includes back-of-set antenna and power cord (no box or booklet).Scanner is in AMAZING shape for its age and is housed in an attractive, wood-look cabinet with LARGE bright green LCD display . Covers 30-50/144-174/406-512 Mhz. $40 SHIPPED

2.) Bearcat BC-12 CRYSTAL 10-channel base unit. These are quite rare to find, and this one is in BEAUTIFUL, virtual MINT condition (SOLID 9 of 10 !).Has scan speed adjustment control and delay on/off switch. Includes antenna and power cord (no box or book).Works and looks great..a must for collectors or, as a reliable backup radio ! $40 SHIPPED

Radios shipped by USPS parcel post. Insurance optional if requested as is different shipping method for additional cost as per USPS rates. If interested or have any questions, feel free to Email me @ any time. All replies answered. Payment via M.O. or personal check (w/ 14-day waiting period for clearance).

Thank You and Happy Monitoring !!

3008. Balun and MQ-2 Hybrid Quad

>
> Any ideas on what might be wrong?

I am assuming this is NOT one of the MFJ switching supplies.

If its one of the non-switching supplies, I would look for an IC that
may be something like an LM723. They are fairly cheap (about $.50).
Try replacing it. I think if one of the pass transistors let go you
wouldn't be getting 24 volts. You may have something like a Darlington
Driver thats bad, but the first place I would check is that IC.

GE Portables
GE MPA VHF 146-162 full system keypad. Radio is as new and is almost perfect. The only flaw is the grip tape under the PTT button is peeling at the edges. Otherwise perfect. The next feature is, The radio is Key pad programmable. 16 channel scan and front face programmable. Has a like new battery and a good rapid charger. Also a belt clip. $500.00
GE MPA VHF Select 157 - 174 split. Nice radio 9 condition with battery and standard charger. I have it programmed down to 154 MHz with no trouble but will go no lower. $200.00
GE MPD VHF select. 136.- 153. 48 channel alpha-numeric display. This is an Intrinsically safe radio at about 7.5 - 8 condition. With battery and standard charger. This radio works well on the 2 meter ham band This radio has no trouble with the public safety band or hearing the NOAA weather radio on 162.475. $125.00
GE MPD UHF select model 440-460. 48 channel alpha-Numeric display. programmed on the 440 ham band and works on the local repeaters and GMRS. With Battery and standard charger. Nice 8 - 8.5 radio. $100.00
GE MPD Scan UHF 440- 460. 48 channel Alpha-Numeric display. Also programmed on the hamband for testing. Works on the local repeaters and GMRS. with battery and standard charger. $125.00
GE MPD vg full system keypad VHF 150 -162. 48 channel alpha-Numeric display with scan and full DTMF keypad. I have this radio on the 2 meter amateur band and it works great. Nice radio with GE Voice Guard digital encryption if you need it. I have the Encryption turned off. With battery and standard charger. $145.00
GE KPC 300 VHF 150 - 162. 16 channel scan. Like new Intrinsically safe radio. with leather case and desk charger. $165.00
GE PCS UHF 8 channel. I have this radio on the uhf ham band for testing and it works the local repeaters. with battery and charger. $95.00
GE MPS VHF Like new 10 channel. With new battery, new antenna, and a standard charger. $65.00
GE MPS VHF 12 channel. Set of 4 that talk to each other with all new batteries and antennas. All in a rack charger. $225.00
GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1 good battery. With 1 dual slot charger. $225.00 all 3 radios.

GE Mobiles
GE Phoenix SX VHF 16 channel with dual priority scan. Grey case with mic, speaker, and power cord. Tested working. $75.00 each. I have 2 complete.
GE Mastr II UHF 75 watt mobile. Painted handle. Drawer only $75.00
GE Mastr exec II VHF 75 watt mobile complete with accessories. $60.00 each
GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr II or Delta. $20.00 each
GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that I have

seen marked
Ericsson) $65.00
GE Delta S Low band 42-50 100 watt mobile. Complete with cable, mic, speaker, and s500 head. Will make a great 6 meter ham mobile or base. $125.00. I use one for 6 meter and I have made contacts in Texas and Canada.
GE Ranger VHF 150.-162 100 watt mobile. Complete with cable, Mic, speaker, and s550 control head. This is a great public safety mobile or will tune to the 2 meter ham band. $175.00
GE S820 head and Mic. I was using this on my 6 meter delta in my van but it was just to big with 3 other radios on the engine cover. $135.00
GE S990 head. Looks new but I have not had time to test this yet. $75.00
GE S550 head 16 channel. Just got this in untested. $35.00

GE Accessories
Mastr II control cable. $8.00 each
Mastr II head for mobile repeater operation. $5.00
Mastr II Mic. $5.00
Mastr II 8 channel tone boards. $5.00
Mobile Repeater cable for Mastr II. $10.00
Mobile Repeater cable for Delta or Ranger. $30.00. I have seen programming cables made from these.
GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5. $4.00 each. I have a large amount of 203.5,186.2, 179.9, 173.8, and 162.2. If you buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50 each.
GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each. I have 2 sets of EC/5C UHF icoms left and I bought 7 sets of 2C UHF Icoms = $30.00 per set. I have 5 sets of these left now.
GE Delta cables. These are the downloading type used with the S820 heads. $40.00 each
Delta mounting plates. $10.00 each
Ranger mounting plate. $15.00
GE S-550 / 500 and others mounting brackets. $5.00 each
GE MPA, MPD, MTL public safety mic. $35.00 each
GE PCS Universal Rapid charger. $35.00 each
GE MPA standard chargers. $20.00 each
GE MPA Rapid chargers. $30.00 each
GE MPI desk charger with wall transformer. $10.00
GE MPI Rack charger, 8 position. 25.00
GE MPI Mobile battery charger, Rare. $20.00
GE Battery discharger analyzer. For MPA, MPD batteries. Attaches to a rapid rack charger with a DB 15 cable and uses a MPD body to attach a battery to. Has LED readout in display area of MPD body to tell discharge rate. Another rare GE goodie. $45.00
GE shoulder strap like new, attaches where belt clip is. $15.00
GE Belt clips. $10.00 each
GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card and power supply / speaker. $300.00

Other Radios and Accessories
Marconi UHF portable. 16 channel scan with NOS battery. Made by Midland. $75.00

Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$75.00
Motorola VHF GP300 2 channel. Fair battery and charger. $150.00
Motorola Mitrek VHF high 110 watt drawer only. $50.00
Motorola S1350C watt meter. with 10 watt 500 - 1000 MHz element. $65.00
Motorola Adapter for MX radios for the 1801 suitcase programmer. A and B prom. $175.00
Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of crystals for each radio. Also have a working battery and charger for each. I have 4 of these. $50.00 all
Motorola UHF Convert-a-com Amp. 5 in 40 watts out. $45.00
EF Johnson 242-8600, 800 MHz LTR I have 4 of these. $25.00 each
EF Johnson Challenger UHF 80 watt trunk mount, 99 channel Alpha-Numeric head.$225.00
Kenwood TK 940, 800 MHz dash mount radio. $100.00
Uniden SMS 825 ts, 800 MHz Dash mount radio. $75.00
Radio Shack Pro 50 20 channel direct entry portable scanner. $25.00
MRC 100 Repeater controller in rack mount. $100.00
Voter from IMTS phone system. 2 rec and 2 tx cards. $40.00
Maxon Rapid Rack charger for 0510/0520 radios. Think they will work with the sp2000 as well.$35.00
Antenna Specialists on glass 440 antenna. New old stock. $22.00
Antenna Specialists on glass 220 antenna. New old stock. $22.00

Consignment section
This area is for a few friends who like those other radios you know "Motorola" They are good people and I will pass along any trades you may wish to make.
Motorola X9000 VHF 50 watt, Alpha-Numeric head, Siren complete. $425.00
Motorola Maratrac VHF 100 watt 16 channel head, Never mounted in a vehicle.$375.00
Motorola Maratrac UHF 100 watt 99 channel head, $425.00
Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each
Motorola HT1000 Intrinsically safe, Re-cased looks new. 16 channel scan with charger. $425.00
Motorola P200 UHF high power. 6 channel. $150.00
Motorola MT1000 UHF 16 channel scan. $250.00

Want List not FS
Extra parts for suitcase programmers. Data modules, Printers, cables, proms, anything you have extra. MPA or MPD portables what do you have and what do you want for them?
Johnson scorpion program cable. PSX200 UHF mobiles.

Terms
All prices are plus shipping from 40201. All items are used unless noted and only have a no DOA warranty if I say it works. If I say not tested your on your own. If I think it may be bad I will not list it. I take cash, Postal Money Orders, Paypal, and checks but I hold them for up to two weeks to clear before I ship. If you have a question E-mail me.

3023. Iambic paddles -- reality check

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-01 13:19:24 UTC
From: cprstn54zz@att.net
Message-ID: <3c7f7cc3.79829640@news-server.optonline.net>
Source record: 46578

I am committed to mastering CW at more than 5 WPM and have decided to start off with iambic paddles, namely the Kent TP-1. I have the following lingering questions:

(1) Why do double keys exist, like the Vibroplex? See: http://www.vibroplex.com/dihk.jpg

(a) Can't you just turn off your electronic keyer and use one paddle of your iambic as a straight key?

(b) Why would you want to use a straight key if you have mastered iambic/electronic?

(2) For non-electronic keying, why is the straight key more popular than the "sideswiper" or "cootie key"?

(3) Can't an iambic key also function as a "sideswiper" if you turn off your electronic keyer and jumper the two posts together?

Hello,

We have for sale some Telefunken receivers, 10 Kc- 30 Mc. For pictures see our site http://home.hccnet.nl/fbj.derooy/ .
All these receivers is in working condition. The are used by the Dutch coastguard, RDR and the Dutch army too 1995. This receiver has a direction finder.
For more info mail me.

Greetings Frans PB0AKY

For the German people who goes to the Ham-market at Rosmalen on 09-02-02, we take one to this market.

Dont forget those diodes too...they are probably gone...better get a schmatic too...it will answer your questions...take this opportunity to raise the the voltage capability of the power supply and go to the 210V tap in your supply and you will have a much easier 1500 watts out...73 Murray

That's interesting. I owned an FT-1000D for about eight years. It had to go back for repairs twice... once the finals and drivers blew (no apparent reason... almost 1:1 SWR) and the other time just the finals (same deal). The repair bills were $500+ and $350 respectively plus $50+ freight each way. After the second time, I sold it and bought an Icom. I thought it was just the 1000D... from your story, it looks like those high repair charges are a Yaesu problem.

That said, I must admit to having a 2m Kenwood in which the finals went. The final module alone was $195. I bought a new Icom for $249 instead.

I've had several Icoms repaired and they seem to be far more reasonable on their repair charges.

Probably not, as the keyer output would be dead after you turned it
off.

>(b) Why would you want to use a straight key if you have mastered
>iambic/electronic?

a) Some folks like to use a straight key now and then, even though
they normally use a keyer.

b) You can use the straight key to produce a continuous signal for
tuning.

c) To participate in the ARRL's "Straight Key Night" each year.

>(2) For non-electronic keying, why is the straight key more popular
>than the "sideswiper" or "cootie key"?

Supply and demand. There were millions more straight keys made than
sideswipers or cooties. They were also much cheaper. The railroads
and the military were major sources of straight keys. I've got about
a dozen straight keys and only one was made for the ham market. I get
a kick out of using my old J-38, or my Navy Flameproof, or the big
Marconi as well as the other straight keys. Of course I'm into
nostalgia. 8*)

>(3) Can't an iambic key also function as a "sideswiper" if you turn
>off your electronic keyer and jumper the two posts together?

Yes. Some iambic keyers allow you to turn off the iambic feature.
Of course, you don't have to squeeze the paddles if you don't want to.
You can bang away at them just the way you would on an old W9TO keyer.

I learned on a straight key, before electronic keyers. Some of my friends had mechanical bugs.

After a few years I got more interested in CW and found that a straight key can be fatiguing, and limit speed as well. I jumped to an Iambic Keyer and dual paddles, and have not used a straight key in over 20 years.

If you had learned on a Bug, you would use a single lever electronic key as this most nearly duplicates the action of the mechanical bug. If you learned on a double paddle key with a mode b keyer, you would not want to use a single paddle key.

As for why the straight key / paddle combo, all I can say is Nostalga. Just for fun I have recently tried to use a straight key. I do not find it particularly rewarding.

John / KA9CAR

Ive had mine a Month now and Really love the sound from it, I use it
right now exclusively base. I find the SW Broadcasts very enjoyable
over my IC735.

> Does this radio have a AM filter option that would improve SW listening?

I think so, but I Havnt found all the Buttons yet :)

> For The poeple using this radio for a base radio, are you happy with this as
> a base?

Very Very happy. Ive broken through some amazing pile ups with 100 w
and an A3 Beam at 25 feet (Ill send pictures :))

Im so happy I bought this rig. Its a dream to operate and sounds great.
I'd Highly recommend it.

I bought one for my truck but thought I would wait until spring and in the meantime use it as a base and become familiar with it.Very suprised at how easy it is to operate but the receiver leaves a LOT to be desired. My TS-850 and even my 101B hear much better.I can't even use the thing on two meters because any VHF or UHF repeater nearby will desense it so bad,just like a 2000 or 2100H.
Nice mobile but anyone using one as a base is missing a lot.TG

A used Yaesu FT-736 would fit this bill. They had optional 1.2 ghz modules
available (the radio comes factory with 2 m and 70cm). It was also
available with an internal ac supply, and a few other features.
It'd be worth keeping an eye out for, usually still in the 800+ dollar
range. (this is an all mode radio)

Hi all,

To complete the museum pages, I need

1. Informations & pictures of the following items :
587 Audio Band Pass Filter
7079 Vinyl Carrying Case for TR-33C
AN-5 Antenna Kit for SPR-4
DC-PC DC Power Cord for SPR-4
HS-1 Headphone
L-77 Linear Amplifier, L-7 with face lift to match TR-4310
LN-5 AC Line Filter, "Inductube"
MMK-33 Mobile Mounting Kit for TR-33
MMK-44 Mobile Mounting Kit for TR-44, TR-44B, TR-44C
MMK-72 Mobile Mount for TR-72
MN-4439 Matching Network
MODEL 505A Power Rectifier Unit for transmitter AN/ART-13A
MODEL 740 TR-3/TR-4 VHF Mod Kit
MRT-55C Marine VHF Transceiver
R-4A Receiver, 13tube version
R-77-SM Communication Receiver, finalized as R4245-SM, army green
TR-4 Transceiver, late without Noise blanker-switch
UHF-300-HP High Pass Filter
VARIOUS FILTERS ?????

MODELS MADE BY DRAKE, BUT SOLD UNDER OTHER NAMES:
DEBEG MSR-2 emf�nger. German. Same as Drake MSR-2
HAGENUK DF-160 duplex filter, for 19" rack. German. Same as Drake DF-160
S.A.I.T. MR 1414 Same as Drake MSR-1
S.A.I.T. MR 1415 Same as Drake MSR-2
S.A.I.T. VHF Same as TR-22M

Actually, the hamfests used to be pretty good, until eBay came along. Now, you often see pretty silly prices on things, along with a posted sign saying something like "it goes for $XXXX on eBay!". As far as eBay, it used to be good for test equipment purchases, but every radio I ever bought from eBay needed some sort of repair, being represented by such endearing terms as "nice", "great shape", "mint condition", etc. I also discovered that those eBay ratings are worthless; they will let you know if a person has bad feedback, but it makes one wonder how many of those "good" feedback items are genuine. For this reason, I don't deal with eBay folks anymore. It appears that most of the items appearing on eBay at this time are the floor sweepings that folks haven't been able to sell at the local hamfests. What was that comment about people who "allow" themselves get taken advantage of? How about people who "allow" themselves get killed by a murderer, or people who "allow" their homes to get burglerized? I think a big problem is the folks who run eBay "allowing" some of those crooks peddle their wares to innocent souls. I have run into more honest people at the Maxwell Street flea market on the East Side of Chicago than eBay. Still, even at hamfests, you have your share of the people who are "selling the item for somebody else", so they cannot tell you if the item works or not. Funny, how you see them bringing those same items to the hamfests for the next five years, not bringing anything else of their own. Or, how about the fellow who tells you that the radio that he is selling worked when he turned it on last week, but when you plug it into a source of power at the hamfest, nothing happens. I will say one thing; when I was working for Rockwell-Collins, and attending the Iowa hamfests, every person I ever dealt over there with gave me an honest deal. Something about that state, with its good human values. We need more of those kinds of folks in this world!

Me too. I actually like the wide filter it has on AM. Audio sounds
better.
>
> > Does this radio have a AM filter option that would improve SW listening?
>
> I think so, but I Havnt found all the Buttons yet :)

Yes, but it's almost too narrow to use except for real tight stuff.
You hit the "fil" button on the "M3" menu. It also narrows FM a bit on
VHF/UHF.
>
> > For The poeple using this radio for a base radio, are you happy with this as
> > a base?

It's been ok. The audio is good into a good speaker. I use mine hooked
to my computer sound card and it's a versatile computer rig. I've used
it on all bands from 160m to 70cm all modes including PSK31, SSTV,
RTTY, etc, etc. For a little dinky radio, it's quite amazing, but
don't confuse it with a big FT-1000 on HF. But, for me, I don't need
an FT-1000 on HF. I'm fairly casual, and don't contest, etc, so for me
it's fine. I like being able to listen to almost everything worth
listening to with one radio. I use it as a scanner and air band radio
also. I've been pretty happy with it, but I don't place unrealistic
expectations on the rig. It's not the best contester rig, but for
everyday use, it's just fine. Don't let the small size fool you on the
audio quality. It's very good. Transmit also. I bought it as a mobile
rig to replace my older IC-730, but it's used in the house most of the
time. I only throw it in the car when I go somewhere. I can always use
my 830 if I need tight filters for cw. MK

The MKII and MKIIG have been greatly improved. I had the original 706, and it was a good little machine, BUT could not handle the really strong SW signals, BBC(well formally) VOA, WWCR, etc. Any big signal, the front end could not handle, even with padding! The 2 newer 706s should be better in that regard.

They have the double keys so that you can hold the key down while tuning up. Although some people tune up with the paddle held on dots, it's easier with the key down.

Date: 2002-03-02 01:38:21 UTC
From: Dan Long <w4tq@mindspring.com>
Message-ID: <a5panh$u1i$1@slb6.atl.mindspring.net>
Source record: 46610

Drake Low Pass Filter, 100W - Ebay

This filter is the Model TV-100-LP. It is rated at 100 watts. This Low Pass Filter covers amateur radio bands 160 through 10 meters, as well as the citizens band frequencies. It is rated for 52 Ohms impedance. It works perfectly, and is in good condition.

For those who aren't aware, the purpose of the filter is to prevent the unintended transmission of signals (harmonics, for example) above the authorized ham bands. The filter is placed between the antenna and the output of the transmitter (or transceiver). Aside from helping to comply with FCC regulations for signal quality, it will prevent certain types of TV interference.

For auction on Ebay, click on:

In response to several emails I've gotten, I'll post this follow-up:
This is for both the CE-31A and B model, and is the very detailed
owner's manual but does not have schematics. Lots of good pictorals and
troubleshooting flow charts, calibration and test material, everything one
would need except for schematics. I am looking for a service manual and will
make copies available here if I'm successful.

***Great rig, especially the very "hot" receiver. I believe reading
that the 850 was used as a base station during a climbing expedition
to Mount Everest. As I recall, the unit was listed at the back of the
book under the very extensive inventory of equipments/packaged food
used on the climb. A team from the UK, I believe.

It does require an external power supply.

i dont believe you will find any anymore with a built in power supply and a tuner at these freqs are worthless there is so much signal loss that at 1.2gig no signal would even get to the antenna honestly i dont know why anyone would want a tuner on VHF and above the antennas are so small and most cover the entire band anyways what do you need to tune
i think the only radios out thart cover all 3 bands are the kenwood TS790 and the icom 910 or ic970
good luck

If I set my radio keyer off (putting the radio in straight key mode),
the dot paddle will send solid CW. Also, I can send solid CW just by
locking the mic with the emission mode set to CW. Are these features
unusual?

I have for sale a Corsair I station complete with matching power supply and the matching external VFO. The
Corsair was completely gone through by the factory in March of 2000. The PTO was rebuilt and other upgrades and part replacements were done at that time. The radios first IF crystal filter has been upgraded from the stock 4 pole to the model 220 8 pole filter. All filter slots are full with the 1.8khz SSB filter, 500hz, and 250hz cw filters. The radio works great with only one small paint flaw in the face plate. The model 260 power supply has no marks on the face plate, and the model 263
VFO also has no marks on the face plate. There are some scratches in the covers acquired through the years but with the tilt up bales they are really not too noticeable. I have a factory molded foam filled box for the radio. And will over pack the power supply and the VFO for shipment. All are welcome to drop by LaGrange, KY and pick these up if you have the mind to. This station operates great and not only is it guaranteed not to be DOA but I will offer the buyer a 3 day trial period from date of delivery to return these in same condition for full refund (less full shipping costs).

Pictures via email by request. No surprises here folks..the station works great.
Check my feed back on Ebay with my call sign as my user id.

Price= $600 and I'll split shipping (lower 48)

Can anyone suggest a possible cure for the following fault on my Icom IC-R7000?

After 30 minutes from switch on, sensitivity starts to fall until after 2 hours the radio is completely deaf.

I have replaced the capacitors on the DC to DC Unit, C19 & C20 on the Display Unit, C135 on the IF Unit and all capicitors on the Reg Unit as suggested by various modification sites.

All have had no effect on curing the fault.

Any suggestions greatly appreciated.

Thanks.
Peter Kay.

3072. Wiring your own Knwd program function buttons

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-02 16:44:05 UTC
From: "a. giammarino" <agia@ix.netcom.com>
Message-ID: <s1028ug3vadshl1atd812omjo68g6sii1t@4ax.com>
Source record: 46627

Looking for the schematic to wire up my own program function keys for the Kenwood TS-570. I've seen this schematic before but now I can't remember where. I have gone through the search engines to no avail.

The circuit is something on the order of a series of three or four resistors (voltage ladder?) with switches in parallel with most or all of these resistors.

Thanks in advance,

Does anyone know what type of keyer will work with the 751? I'm not familiar with the 751 and would like to try out a little code on it for SSB. It has a jack on the back of it for a keyer (i believe its a 1/8 audio jack). Are the two polarities just shorted to create the tone? I haven't decided whether to buy or build a keyer for this unit. Let me know if you have any experience with using code on the 751.

Thanks,

Jason

Go to http://www.uniden.com and search for "HR2510". You will find
they can provide a manual for said unit at $7.50 and its item number
is "OMHR2510". I suppose if you do not want to order via the internet,
you could alwasys contact them at Uniden America Customer Service at
1.800.297.1023 during the follwing times M-F, 8-11:30/12:30-5 Central
time.

Hope this helps.

Not familiar with this rx. but have a lot of Icom gear here. Is this gradual deafness on all ranges or just one "band"? These sorts of fault can be an absolute b***er to find :-(

Initial thoughts: does it happen with the rx out of the case? Can you accelerate the onset of deafness by applying GENTLE heat to a PCB? After 2 hours, when the thing is deaf, how long does it take to recover? Instantly, or a few minutes, or hours?

Have you tightened all screws? Common fault in Icom gear seems to be a poor connection to chassis earth, although this usually results in intermittency rather that gradual deafness.

What is the S-meter doing during the couple of hours?

Richard

In theory, you will get 120dB, but in practice you will be luck to get
much more than 90 or 100dB. When you get to those levels of
attenuation, signals will just "go around" the filters. I used to work
on high isolation switches and we were luck to get 120dB of isolation at
HF frequencies, with a lot of work too.

Concentrate on your receiving, listen to the fellows around 7025KC and try to listen to the words. When you are ready, you will be able to pick out the easy words and the longer ones will come. Use whatever key you like to send with, the iambic keyers are probably the fastest, but expect to spend a while before you break the 13-15 wpm. Then you will just spurt ahead, especially if you don't write things down, just listen in your head. Also use the keyboard to receive with when you need to, don't try to use a pencil, I have never gotten used to the keyboard (although I type fine) and it really limits me.

Well, my experience has been somewhat different.
I have purchased several ham radios on Ebay, and have NEVER been
stuck. My last purchase was an IC-751, and it was more than expected.
It's a great rig that I'm presently using.
The ONLY time I've been stung, is when buying or selling here on the
newsgroups. THREE seperate HAMS, lied and stole from me. But that's
another story.

The key is CAVEATE EMPTOR!!!!!

Sorry, no. But if it helps, -- The Sangean ATS 818 ACS is cloned by RS
into the Radio Shack DX-392. Same radio, made by Sangean and wrapped
with RS labels. They have been D/C'd for about 2 years now but it may widen
your choices some. If you locate and buy the DX-392 there are a few radio mod
sites out there with simple mods to improve the radio and I imagine would work
for the Sangean as well. Hope the helps.

Yeah, send it back to the factory repair facility in Bellvue, Washington and quit tryingto fix a sophisticated receiver yourself without the proper test equipment and most likely needed components. I've done it and it works. They will repair your R7000 at a reasonable labor rate plus parts.

One could do it the way I did back when I was in high school.
I started with a one tube regenerative receiver, and it actually worked.
Nowadays, a transistor or IC circuit would be more up to today's standards.
But, start simple, and get to know how the circuits work.
I built one item, a 3 tube radio, from a Popular Mechanics project, that should have worked, but did nothing. I was not able to figure out why back then, but could figure it out now.
I used some new parts, and some used parts. One or more of the used parts may have been defective, though I'll forever wonder.
In the 70's, I assembled many projects, from a 100Khz marker oscillator (from parts, and I even etched the PCB for it), to a Heathkit HW101, a frequency counter, and so on.
All of these worked with no problems, though the counter could have been a disaster, because they provided some sockets for the IC's that would not quite fit into the PCB (pins too big for hole size), and a warning to not enlarge the holes (too far along in the book to be seen in time). Luckily, I had no problem getting it to work.
But back to what project to try, start with simpler ones, and do practice soldering before you get into an expensive kit.
Use a small wattage, fine point iron for small PCB's. Large wattage irons may damage the PCB from too much heat. I have seen many instances of this.
And another tip. Never, but NEVER buy any of the lead free solder.
It takes too high a temperature to be used in these kinds of things.
I have some sitting here that I could not get to do the job properly, and it was the only kind WalMart carried. Plus, make sure it is Rosin core, and never but never use Acid core.
The Acid will wind up corroding things, sooner or later.
I reserve that for things like car radiators. But I prefer to use no flux solder, along with paste for copper plumbing. That way I know I won't wind up with green copper... <G> ..
YMMV

3092. SAVE YOUR TUBES.....

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-02 22:34:06 UTC
From: NI4L <ni4l@charter.net>
Message-ID: <3C81535E.8A3557D9@charter.net>
Source record: 46647

SSB PULSER....
Works with all amps and Tube
type radios....Tune your gear up without fear anymore.
Easy to install in any mic
or radio.. Uses 9 volt power source.Hooks to audio hot and ground.
Tune your gear to full
output using this SSB pulser. Small enough to fit in the base of a
microphone.
This is NOT A CW PULSER
which key's and unkey's in the CW mode . This works in SSB MODE.
Key your mic push the
moumentary switch to activate the pulser and Tune Away.
Let me give you an
example.....
Tuning a Dentron Clipperton
L amp. with a Icom 751 A radio, Pulser installed in a Ten_tec 705 mic.
set radio to full output on
desired frequency SSB MODE into a resonate antenna of course.....or
dummy load
Set amp to proper band
settings
Key mic and push Pulser
button..... watch watt meter it will show aprox 100 to 200 watts out
when tuned to peak output
using Pulser....Remember don't key too long 10-15 seconds
Then check output using
voice.... It will be full Output 1200 watts
See How easy that was....
The amp loved it and now your ready to talk at Full output.
The same tuning is used to
tune a tube type rig also.

You can improve this by using double shielded coax like RG242 or
Rg214, but TVI is more often related to fundamental overload once
you have 70 down or better above 30 mc

3095. ICOM IC-725 question

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-02 22:57:04 UTC
From: gil <gilpi@mindspring.com>
Message-ID: <a5rl2u$v9q$1@slb0.atl.mindspring.net>
Source record: 46500

Im enjoying my new (used) IC-725 transceiver, it has a nice receiver especially on SSB, very wide on AM.

Is the receiver based on the R-72?

Thanks in advance

Gil

Now it gets interesting- seems the winning bidder finked out and
the joker seller has relisted it at a minimum of $250 !!!!!!!!
I noticed the previous bidders looked a tad weird. Looked like
a couple of ringers bidding it up.

3100. Re: FT100D Power Supply?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-03 00:30:08 UTC
From: Turner Morgan <tmorgan@icomcast.net>
Message-ID: <a5rqs902av6@enews3.newsguy.com>
Source record: 46507

Lou,

Check out the Alinco DM330MVT. It's small, has a meter, variable output voltage, tunable switching frequency and meets the current demands of the FT-100D.

Cost was around $180 some months ago, but I think there has been a price reduction. HRO has it listed for $139.95, I think. AES is still carrying the old $179.95 price, but maybe they just haven't updated the price.

There are other, small supplies around, but the Alinco is the one I chose because of the reports of switching "hash" produced by some supplies. The switching supply usually results in a smaller (albiet sometimes noisier) package, and the Alinco switching frequency is "tunable."

Hope this helps.

Message-ID: <Xleg8.7624$fI6.3419@nwrddc01.gnilink.net>
Source record: 46506

Hello All,

I have not been able to find any comprehensive information on Super Regens (solid state). I am looking for design methodology, not so much of a blind cookbook approach. I see lots of tube stuff, but I am looking for BJT or FET design, with theory of operation. I have tried to simulate Super Regen circuits with common base BJT oscillators but the software fails to give me what I am looking for...IE, demodulation of the 200Mhz AM carrier with 1Khz modulation.

From the simulations I have done and the little info I have been able to get, the quenching frequency has a lot to do with getting the "Super Regen" to work properly? Is this correct? I would appreciate any help any of you seasoned Amateurs who have experience with Super Regens, can offer me. I am starting to think I am looking way too much into this simple design and that is why I am missing the obvious. Any help/suggestions can be mailed to rfmac2000@yahoo.com

Thanks!!

Best Regards,
Nick

Just make a triode oscillator with abnormally high value of grid leak. Get
it squegging at 30 to 60 kHz.

Then make an FET equivalent.

I've never really noticed that on the 706mk2g. I listen to many AM-BC
and SWL stations that are full peg, and no noticable distortion.I
guess they improved that part.
If there is a weak link to the 706g's receiver it's the longwave
reception. Quite a few AM images here in Houston. I've also noticed a
bit on 160m at times. My tuner will clean this up on 160m, but I
haven't built a filter for longwave yet. In the mobile much of this
would probably not be a problem. As far as listening to AM-BC and SWL,
I like it. But as I said , I like a wide filter because the audio is
better. Some don't care for those too much as they are dx'ing. But
there are mods to change the filter. I find the narrow filter using
"FIL" is really too narrow for most use. You can get communications
audio from it, but thats about it. MK

Looking for linear amps on 222 and 432, made by Teletec.

Thinking there might be some used ones around, since they are no
longer in business.

Let me know what you have, including condition- output-and price.

Thanks Owen KB5XE >>>>

3116. Iambic sending -- SK prosign?

Newsgroup: rec.radio.amateur.equipment

I have just started with iambic paddles and am doing OK, except for the SK prosign. I am finding the timing of the final dah-di-dah very tricky if I try to squeeze it out. Do most folks squeeze it or just do it single-paddle style?

I couldn't find anything on the web about iambic sending of prosigns or punctuation. Any list of tricks out there? I read K7QO's article.

It would have made a lot of sense to figure out the most appropriate
newsgroup to post to, instead of posting separately here and in
rec.radio.amateur.homebrew I don't take kindly to cross-posting,
but if you really had to post to both, you should have cross-posted.

I replied in .homebrew

But since your post here is a little different. I thought I'd add
something.

A superregen receiver is just an extension of a regenerative receiver.
Having discovered regeneration, Howard Armstrong stumbled on superregen
ten years later, while doing some checking for his court battle of
the regen patent.

The problem with the regen is that the best sensitivity is when
it's on the verge of oscillation. But that is a very sharp point,
and moving your hand near the radio, the antenna shifting in the wind,
overload and who knows what else, will make that point very troublesome.
If you aren't receiving CW, you don't want the receiver to be oscillating,

yet the most sensitive point means it will keep going into oscillation.

(In case it's not obvious, a regenerative receiver is in effect an oscillator. By controlling some element, you can control whether it's just a high gain circuit, or actually kicks into oscillation.)

A superregen builds on that concept. By in effect modulating the regen detector, you can keep it at the point of highest gain, but without the detector being able to sustain oscillation.

The quench frequency has to be above audio or else it's going to get into your audio circuits. I've seen guidelines about the ultrasonic frequency, and it's stated as a percentage of the signal frequency. I've yet to see an explanation of the reasoning.

But since you are modulating an oscillator in effect, you end up with a wide bandwidth detector. Useful in a lot of applications (where transmitters aren't too stable, like in the days of modulated oscillators and even today with cheap equipment), but useless in others.

While Howard Armstrong obviously first came across superregen when the regen tube was also supplying the quench frequency ("self-quenching") by the time of the patent, he had added another tube to do the quenching. (That's what shows in the schematic, but I have yet to get around to reading the text, because via the web the method is somewhat cumbersome). But virtually ever since, superregen receivers have been self-quenched. You see this in a long trail of one-tube and one-transistor superregens, and you see it in the books where rarely is there a mention of external quenching, and if it's mentioned, very little is said except that it can be done.

When you have your regen detector also supplying the quenching, you don't have much control over things. You can't control waveform, you can't control the level of quenching, and you can only control the quenching frequency in a broad way (and changing it will affect the other two). Having bought into the idea that a single stage is the way to go (probably because the alternative is not very visible), people have spent time on trying to reduce bandwidth of the detector by putting in a high-Q tuned circuit, which does seem to help, but not by much.

If you move the quenching to an external source, you can control the depth of quenching. You can try different waveforms (a sine wave might be interesting), and if you can get away from the crude waveform that self-quenching provides, you'd probably get a narrower detector bandwidth. And you could easily change frequency, to get an idea of how it affects operation.

When someone asked about this sort of thing a few years ago, I looked in the books and thought this line of reasoning is the way to go. Charles Kitchin had already been looking into this, and he agrees. He hasn't gone to external quenching (though, I haven't seen all his articles), but he has tried to make the

waveform of the self-quenching better. He says that by changing the waveform, he has improved bandwidth. He says it improves operation with narrow deviation FM, such as seen in amateur radio. (Note: the superregen is an AM detector. It can receiver FM by slope detection, ie by tuning the signal on the slope of the selectivity, and so as the incoming signal varies with frequency, the amplitude of the signal varies according to where it lands on the selectivity curve. This is something any AM receiver can do. But since the superregen has such a wide bandwidth, this works best with wide deviation FM, like FM broadcast. Narrowing the superregen would improve reception of narrow deviation.)

If you're serious about measuring power, go to eBay and buy a Bird 43 wattmeter. Do some research on the elements you will need: they're grouped by frequency range and power level; they look on eBay to see if any are being sold. You can also search for Coaxial Dynamics, a company also located in Cleveland Ohio that makes Bird-43 compatible products at a slightly lower price. Also, their meters are physically larger and might be easier to read under some circumstances. New Bird 43s go for almost $300. A good price on eBay will be $150-$175. New elements are about $70-$75; used ones can go for anywhere from $25 it it's unpopular to $60 if it's common. I found a place in Ohio called NOARD that sells Coaxial Dynamics stuff - reliable.

You may also find a dummy load with a built-in meter as an alternative to just a watt meter, if that's all you want to measure, but for setting up antennas and such, you would naturally want the separate meter.

I bought this at a hamfest and probably should have looked closer at it. When I got it home and plugged it in, the trace on the screen is really really weak and very fat. I tried tapping the input connectors with something to see if I could get any sort of movement on the screen and there was none. ALL TUBES light up but they look pretty dirty on the outside. The tops of them are fairly black. Any idea as to what could be causing this thing to act this way? I would really like to get it working since it's a neat looking little scope. Any suggestions are welcome.

Thanks!

3128. MFJ-945D Antenna Tuner, Like New - Ebay

MFJ-945D Antenna Tuner, Like New - Ebay

This is an MFJ-945D Tuner. It is in new condition, and works perfectly. It is suitable for either fixed or mobile use. It is rated at 300 Watts, and is intended for the HF ham bands, 160 through 10 meters (1.8 - 30 mHz). It uses the "T" design, so it will match about anything (dipoles, mobile whips, inverted vee's, verticals, and long wires). It has output connections for both coax and for single wires.

This tuner uses "cross needles" so that Forward Power, Reflected power, and SWR can all be read simultaneously.

For auction on Ebay, click on:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1335413706&ssPageName=ADME:B:LC:US:1

I will be glad to provide additional information. Contact me at w4tq@mindspring.com

I have a Bird 43, and it works fine, but is real pricey. You might check out the mfj meters -- they don't require a complicated chart to read out the swr, they're somewhat cheaper, and about as accurate.

I have for sale a Corsair I station complete with matching power supply

and the matching external VFO. The Corsair was completely gone through by the factory in March of 2000. The PTO was rebuilt and other upgrades

and part replacements were done at that time. The radios first IF crystal filter has been upgraded from the stock 4 pole to the model 220 8 pole filter. All filter slots are full with the 1.8khz SSB filter, 500hz, and 250hz cw filters. The radio works great with only one small paint flaw in the face plate. The model 260 power supply has no marks on

the face plate, and the model 263 VFO also has no marks on the face plate. There are some scratches in the covers acquired through the years

but with the tilt up bales they are
really not too noticeable. I have a factory molded foam filled box for the radio. And will over pack the power supply and the VFO for shipment.

All are welcome to drop by LaGrange, KY and pick these up if you have the mind to. This station operates great and not only is it guaranteed not to be DOA but I will offer the buyer a 3 day trial period from date of delivery to return these in same condition for full refund (less full shipping costs).

Pictures via email by request. No surprises here folks..the station works great.
Check my feed back on Ebay with my call sign as my user id.

Price= $600 and I'll split shipping (lower 48)

```
NEWLY AVAILABLE Program "ADDALOAD.exe"
======================================
A random length antenna wire may be made resonant at a particular frequency
by inserting either a coil or capacitor at any position along its length.
For overall wire length, wire diameter and location of the loading
component, the program computes either C picofarads or L microhenrys
depending on sign of the required loading reactance.

Greatest wire length accepted is 1 wavelength at the resonant frequency.
Results apply either to a vertical antenna wire or to both halves of a
centre-fed dipole.

The program has an educational facilty to slide the loading component along
the wire while observing how it changes value and type.

Download from website below program ADDALOAD in a few seconds and run
immediately.

Recently, Icom imposed on its dealers a "minimum advertised price
policy" that does not allow dealers to publicly advertise prices for
certain models below minimum Icom set price levels (sounds illegal to
me). I went to a hamfest yesterday, and a dealer I am familiar with
that normally posts prices of gear on the boxes had no posted prices
on anything. You had to ask what the prices are.

As a result, surfing the net will not yield the best price. I suggest
you contact several dealers directly to find out their prices. I
believe you may find your lowest price at www.gigaparts.com, or
www.kjielectronics.com. I have had good experiences with both. I am
sure there are other dealers whose "real" prices may be lower than
those they presently show on their web sites.

Austin Radio Supply is advertising $899.95, including free RMK706 and free shipping, but call for special price. Texas Towers also says to call for special price. Sounds like some swinging deals right now. AES and HRO are just saying $899.95 without mention of special pricing.

This is from the Estate of W8WW, Joe Keller.
Radio was working as of June 2001 and has been offline since then.
Radio was powered back up in January and reception was checked on 10 meters.
Has two extra CW filters and 1.9 kc filter. in orig box with manuals.
Kept in great shape by my father.
All upgrades done by Icom up to 2001.
Excellent Condition, no nicks, scraches or dents.
This is the radio that my father destroyed 10 meters on and was considered
a local in japan and europe by his signal.. Look at the dx summit web site
for a search on listing of W8WW as DX.

More info at : http://www.icomamerica.com/amateur/hf/ic775dsp.html

We are asking $2300.. Its worth every penny for a great radio like that.
My father purchased many different radios like the 1001MP and the
Icom 756 (i think thats the one) but always returned to his old reliable
and trusty 775.

Have the Heil Headset with the DX element and the Icom adaptor for $100 also.
Will sell that seperate.

Open to resonable offers.. Not desperate to sell however will put online
and take to dayton if needed.

Actually it is quite legal, many industries use a " minimum advertised
price policy". Sorry I can't rattle off a dozen or so but I have come
across that issue in the past. It is very commonly done.

Sony has had a similar policy for years. They call it "fair market value" pricing. Sony is also very difficult to get parts from, unless you happen to be one of their licensed warranty facilities. :(Sad to see Icom taking this route.

Hi Guys;
After going thru all my boxes-O-Stuff, I came across these 4 E.F. Johnson items that need TLC but are quite reparable!
I have no time or workspace to work on them.
1- Johnson 229-0203-001 Roller, 25uh, Used, Nice but needs from Bearing repair!
2- Johnson 229-0201-001, 10uh roller, Looks unused but has a light crack on one corner of the ceramic insulation, acroos the Long Bolt hole, Can be left as is, seems still strong!
3-Johnson 154-32 Used Air Variable, 30-300pf? Not sure. Used, needs 1 end ceramic end replaced with a Plexiglass copy, A few saw cuts, some filing & 4 holes, easy!
4- Johnson 132-502(#15-147) Dual Section Air Variable, Unused, 150 pf Ea. @ 3500v. Both ceramic ends need to be copied & replaced. But that hard to copy in Plexiglass, needs some patience & time, Very Costly if no repair was required :-)

3149. 12 volt octopus?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-04 11:44:03 UTC
From: cprstn54zz@att.net
Message-ID: <3c835b50.45734687@news-server.optonline.net>
Source record: 46453

I have five small items of equipment (and counting) that each need under 1 amp at 12 volts. I have a big 12V power supply for my TX with amps to spare, so I could use that for the supply. Is there a cleaner way of feeding the power than a terminal block and a bunch of wires/plugs from Radio Shack? Maybe a wall wart with lots of 12V wires out?

I have some of the automobile cigar lighter 3-1 receptacles and equipment plug/wires left over from boating, but that seems bulky/inappropriate.

Are you talking about contravening the conditions for PMR446 or contravening
the conditions for your amateur license? If it is the latter, I am not clear
why it
would be a contravention - ok, the amateur license does not permit 446, but
if alternative legislation does, surely you just operate under those rules
while
on 446 and do not use your callsign.

Martin

You should not attempt to transmit while it is charging from the supplied charger - that is only round 500 mA capacity while the rig, on full power, will draw closer to 2 A. According to the manual, you should be able to transmit while charging from a higher capacity source, though I have not yet tried it.

In general, I love my little TH-F7 - worked a couple of Spanish stations on it over the weekend! (Of course, I was in Spain :-))

OTOH, I won't use Paypal and simply skip paypal-only sellers. I use USPS
money orders. Not everybody who insists on Paypal and UPS is a crook but
crooks do that to avoid USPS mail fraud hassels.

From flat it takes about 5 hours, you can tx while charging but not from the supplied charger, if you do not have a psu then a 3 amp cb type would be ideal to be able to user the full power output. It will of course take longer to charge if you tx with full power, I use a 1 amp supply and rarely use more than L power (500mw).

One note on the TH-F7, it would seem Kenwood designed the speaker mic sockets to suit only their own range of microphones, the sockets sit inside the case slightly and with some speaker microphones they do not go in deep enough (try plugging in a normal 3.5mm jack plug and see if it connects properly !). The Kenwood microphones have a plug designed to fit perfectly ;-)

West Mountain Radio just came out with Rigrunner. Mine is quite well made.
MFJ offers several (three, I think) similar units. I assume these are of the
usual MFJ standards -- which is why I bought the Rigrunner.

Last month it was selling in the $850 range, but everyone seems to be advertising it at $899 right now. Your best bet is to just get on the phone and call a bunch of dealers and see if anyone wants to go under that price. (If you do, let us know what you find out.)

Is it true there are problems with making mods to the newer models of the Yaesu FT-50RD in order to render it capable of transmitting on CAPS and MARS frequencies? I have received the mod document from Yaesu but have heard rumors that since my rig is a newer model(the sticker with the model # is white) it will not work on the amateur frequencies once the mod to transmit on CAPS frequencies is done. Has anyone else had experience with this and if so is there a work-around?

Tim

3162. Re: Re: Ebayers: IS Paypal Heroin?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-04 15:30:43 UTC
From: Ed Juge/NM <ed_juge@zianet.com>
Message-ID: <3c83854b.0@oracle.zianet.com>
Source record: 46464

I have a little different outlook. PayPal is my favorite method of paying for or receiving ebay auction funds because...

1) Convenience: PayPal, is a two-minute, at-home process. The other options mean running around in the car for an hour.

2) Speed: The seller gets his funds and the buyer gets the item 5-10 days sooner.

3) Security: No lost or delayed mail to worry with.

Maybe I'm lucky but I've never had any hint of problem with PayPal. I have also paid for several non-auction items via PayPal and had 'em in my hands 2-3 days later

OTOH... I recently sent a $185.00 Postal MO to NJ via Priority Mail. It never got there. I had to send ANOTHER $185.00 or forfeit the item and likely get negative feedback. Payment can't be "stopped" on a Postal MO. If it is lost, your ONLY recourse is to wait two months and see if it has been cashed. If it hasn't been cashed --apparently by ANYONE-- you'll get your money back... which, luckily, I did.

If I can't use PayPal, I'll purchase a cashier's check for $3.00+ (your bank's fee may vary) rather than a $.90 Postal MO. At least payment can be stopped if it is lost. I've sent the last few via UPS or FedEx so I could track them... another few $$. (You could say I'm paranoid now.)

Unless an auction is for something I "can't do without" (rare), I will pass on those where PayPal isn't an option. I wonder how much you're losing on your auctions by limiting your bidders to those who are willing to chase around for an hour purchasing and mailing a MO or cashier's check.

My two cents worth...

None ... I've bought but never tried selling on ebay. OTOH, having skipped a few paypal-only auctions myself, I wonder the same about sellers who only accept paypal.

I don't mind using a credit card to buy from established businesses - in fact I was just now interrupted by a supplier telling me an order was ready and needing a card # - but I've read of some very bad experiences with paypal right here on reeky radio. Urban legends?? Maybe, but I trust fellow hams more than paypal; or rather more than people who can access paypal data. Naturally YMMV.

He also mentions that they are great for fire and EMS, but forgot to mention
that they are illegal for that use.

Greetings:

I am looking for a xtal calibrator plug-in unit for a Drake 2B receiver.
Also need the Speaker/Q Multiplier unit that goes with a Drake 2B. Please
email if you have either of these items.

Thanks for reading...

Thanks for all the tips, I'll check some of them out. I did get my hands on the instructions set for the TS440 and now am writing an application to run in windows for it. Should have it done in a week or two.

Thanks
NI1Z

Cross-posted to: rec.ham-radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.swap,rec.radio.shortwave,rec.radio.swap

I have for sale a nice condition Yaesu FT-101ZD. This particular
transceiver is the version with AM mode included.
The cooling fan option is also installed in this rig.
Cosmetically it is in nice shape with one small hairline scratch
next to the clarifier control. Electrically it is in fully
functioning condition with full output 80-10.
$325.00 plus shipping and insurance from zip code 76001

Thanks!

3196. Customer service from MFJ?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-05 16:25:59 UTC
From: Lester Wahl <torpor@fnal.gov>
Message-ID: <a62rehahh1@info4.fnal.gov>

Has anyone else experienced a lack of customer service from MFJ? I wrote three letters (to the address listed in the manual) to MFJ describing a problem with a product and never got any correspondence back. I have since talked to others with the same MFJ product, with the same problems, and they indicate they haven't had their complaints addressed either.

Thanks for your comments.

Hello Lester,
My only experience with MFJ was for tech support on my AL-811H Ameritron amp which I purchased new about 2 1/2 yrs ago. It was my first amp and so I had some questions. The amp tech guy then at Ameritron was "John". John was always very informative, courteous, and helpful.
I did attempt to purchase an extended warranty plan from them for the AL-811H and gave them the CC# to charge. After I full year they had still not activated the extended warranty...so I canceled.
So.... I have had good - and - not-so-good experiences with MFJ.
Lastly though after 2 1/2 years of hard daily use my AL-811H still runs full output with the original Svetlana 811-A's....

Les....I have corresponded with them several times via email....and they got back to me fairly fast. My problem, was their service is way too high....but that's basically with all of em now. I have one of their voice keyers with a problem, but its not worth it. Might as well buy a new one. Service with any or them, isn't practical anymore!

Hi, Vito...

Sure, there are legitimate horror stories about PayPal...and eBay. But, keep things in perspective... ONLY those who have a bad experience want to warn their fellow hams. That may reflect one in a hundred or one in ten thousand bad experiences. There can be problems in almost anything you do in life.

The best way to avoid a bad eBay experience is not how you pay... it's to check the seller's feedback. There are some guys out there who delight in finding any off-the-wall reason to post negative feedback --without ever contacting the other party to see if the issue can be resolved. So one such post out of 50 or 100 is little cause for alarm. When you see a half dozen out of 50 or 100, you probably should move on. I even see an occasional seller who won't accept a bid from anyone who has negative feedback.

I am FAR more nervous about sending big $$ to someone who posts on a newsgroup where there is no "feedback" to suggest his reliability. That said, I have bought and sold on newsgroups several times and never had a problem. I always double-check the address I'm given against the callbook, and I always do a newsgroups search on his callsign to see if anyone has complained about him. Hopefully, this might catch that one in a hundred (or thousand) exception but I prefer to believe most hams are basically honest. So far, nobody has changed that opinion.

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-05 19:06:52 UTC
From: Randy Evans <evansr@hcsmail.com>
Message-ID: <3c85166b@news.hcs.net>
Source record: 46376

I used to be a "Verified" PayPal user. My transactions were high enough that I had to sign up as a business account. Even though PayPal gets to use my money (and others) during those times when the transaction is taking place, they still see the need to charge unreasonable rates for their service. Heck, I'd rather use a real bank if I'm gonna have to pay those kind of fees.

On that subject, Ebay's fees have become excessive as well. They've gotten big enough to where they think they can just raise their rates anytime they feel like they want to make more money, and they do that a lot (raise rates and make money). Since PayPal and Ebay kind of go hand in hand it's no wonder people are beginning to complain about them (both of them). I remember when PayPal first started out. They charged almost nothing, and in some cases didn't charge anything . . . all for the sake of handling everyone else's money. I mean after all, they were making money just by "handling" our money. Then they wanted to make more money. Then they wanted even more & more. Now people are complaining that some folks don't use PayPal, and PayPal can't figure out why the rate in which people sign up for their service is dropping fast. The reason; Well first, they suck. Second, Their being investigated by at least four states because they're starting to act and operate like a bank, but since they really aren't they're not regulated as such, nor are they FDIC insured. God forbid if anything happened to their system while you had money in stasis (under their management). You'd lose it. Period.

It could also be because you can't actually "talk" to a real person should you have a problem. In fact, PayPal admits to making it as difficult as possible to being able to actually get in touch with a live human being if you have a problem.

Like I said; PayPal SUCKS. Plain and simple.

And if you haven't had the problems many people have then your lucky. But beware, your number is coming up if you continue doing business with them. It's like the lottery really. Eventually your lucky number will come up. Hopefully you won't be playing the game when it does.

Now I'll wait and read all the flames from all those loyal PayPal'ers who haven't been burned yet or don't mind being bent over their own money . . . .

For Sale- Kenwood TR-2500 2 Meter FM Handheld.
Has SMC-25 Speaker-Mic. and PB-25 Ni-Cad battery. I tested
the unit using 8.4 volt lab supply, I have not tried to charge or test the
battery. The speaker -mic works and the radio receives and transmits. I
received a repeater about 25 miles distant while in a metal building and
observed output power on wattmeter, but no further checkout done other than
to operate controls which appear OK. Unit is in fair to good cond. and has
seen some use, exhibits noticeable wear, but priced accordingly. Does not
appear physically damaged. 45.00 plus shipping, thanks.

I have always just called them on the phone if necessary. They were very helpful and accomodating. Never had much luck with email. Sent one item to them a couple years ago and service charges were very reasonable at that time. YMMV!

From: Gary Kendall <kendall@vt.edu>
Message-ID: <a63epf$18e$1@solaris.cc.vt.edu>
Source record: 46368

Would anyone happen to know of an "online" source for a copy of the Kenwood TS-130S operator and/or service manual? I've located some reasonably priced sources for a "hardcopy" version, but if there's something available via the Web that would be better (not to mention quicker and cheaper!)

Any info would be appreciated. Thanks!

From: hpfclxc <hpfclxc@yahoo.com>
Message-ID: <1015374030.343420@cswreg.cos.agilent.com>
Source record: 46372

I am looking into buying a low cost transceiver, new or used. However I have not been able to find features/performance comparisons of older and new transceivers. For example, how older ICOM IC-745, IC-746, and IC-751A, etc., compare to the new IC-518. They seem to be rather close in price range.

Any comments and pointers will be greatly appreciated.

Source record: 46373

The 745 and 751A are both 1980's series radios. Both very good radios, but no DSP, band-stacking registers, etc. Still viable radios for the money. The 746 is still a current radio and pretty much state of the art as far as Icom radios is concerned. Of course there is now the 746 Pro, but the 746 is still a wonderful radio and it is still sold. I assume you meant the 718 rather than the 518. The 718 is a basic, sort of a starter radio. Good features, and good bang for the buck, but not in the same league as the 746. A 736 in good shape would be worthwhile looking for too. I'll let someone else comment on Kenwood and Yaesu

Dick - W6CCD.

Re: MFJ Service...

I have sent them emails with problems and request on several occasions and they always responded within 24 hours.

Also they sent me parts, free gratis, to fix a problem I was having with one of their products. The parts arrived by UPS within 3 days. I'd say it was "good service".

But then again... the product should have been "right" to begin with. No excuses.

I currently own four of their products and I am satisfied with them, I have owned a couple of others in the past.

Once while I happened to be visiting Mississippi State University there in Starkville MS, I dropped over to MFJ's main plant, for a visit and I was shown around all of the plants by Martin F. Jue himself, MFJ, Ameritron, Mirage, Vectronics, and treated very well by all whom I met.

Martin is a good businessman, a dedicated ham, and he has the uncanny ability to stay profitably in business while others throughout the ham radio industry struggle and keep going out of business. His products may not be perfect, and they may not be Rolls Royce quality, but he fulfills a lot of needs in our hobby. He's one of my "minor heros".

All in all, from my viewpoint, I rate MFJ pretty high.

From: Joe Leikhim <jleikhim@nettally.com>
Message-ID: <3C858254.98017ABA@nettally.com>
Source record: 46379

Certain tones like 206.5 and the "M" (Motorola) tones are "unofficial",
that is, not established in the TIA's CTCSS spec's for land mobile
radios. However, due to design differences in various radios, the
processor of one model may be able to generate and decode these off-beat
tones, while another model can't, or by software programming simply
doesn't.

I've seen used 745's in the $350 to $500 range.. depending on condition, filters, and power supply. Bang for the buck, that's going to be hard to beat.

The 2BQ kind of scarce these days... I'm not positive, but I think a
2CQ will also work if looks don't matter. But it doesn't exactly match
the 2B's black paint. I'm pretty sure a friend of mine who once had a
2C, used a 2BQ as the speaker. So I think either one will work. I've
got a 2C and 2CQ. MK

Source record: 46383

I have a website for the antenna I have developed for AO-40. This is NOT a BBQ grill dish, this is the real thing! Watertight HELICAL feed, NO aperture blockage,2' dish is 20.5 dBi gain, 3' dish is 25 dBi gain. 2" crossboom mount.A true performer. Signals from AO-40 at unbelievable squint angles. You should hear what you have missed! I have also posted tips you may find interesting. AMSAT has expressed intrest in my antenna to be sold at Dayton, but I have a limited supply. Drop by my site and just tell me what you think if you like.

Hello,

I have been getting reports telling me that my transmitted audio is very quiet, even when I talk very close to my microphone.

I am using an Icom IC-2E handheld radio.

Does anyone have a schematic / circuit diagram for this radio, that I could have a copy of ?

Thanks!

Richard Parsons

Message-ID: <61279499.0203060835.dae4194@posting.google.com>
Source record: 46389

Hi Group,

I am working on friends JRC NRD-525 which has a problem. I believe it is one of the synth loops or maybe in the BFO circuit. When listening in CW mode, turning the BFO to the left past center, a horrible digital noise is heard. Same happens when in LSB. USB, no problem. Also, the speed of the digi noise is changed by the PSB control.

Looking for some help please from some technical wizes who have worked on these radios. Is there a card extender available? From where?

Thanks all.

Paul

Of course it is. If you are talking about transmitters or
transceivers, you will want a reasonable degree of isolation between
the two positions. A good switch for the price in the application you
describe is the Alpha Delta switch.

You must be certain that the isolation between the radios is adequate,
40 to 60 dB would be a good number, most good switches will ground the
unused radio. Be sure of this before you transmit into it!! 25 Watts
will blow out almost any input transformer even if it is turned off.

3252. FS:Ten Tec Corsair Station "Complete"

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-06 22:46:43 UTC
From: Tim Randa <randas@mindspring.com>
Message-ID: <3C869C52.1BBA79D9@mindspring.com>
Source record: 46307
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Now that I have the tire kickers taken care of (I hope) I will again
list this great Ham Station

I have for sale a Corsair I station complete with matching power supply

and the matching external VFO. The Corsair was completely gone through
by the factory in March of 2000. The PTO was rebuilt and other upgrades

and part replacements were done at that time. The radios first IF
crystal filter has been upgraded from the stock 4 pole to the model 220
8 pole filter. All filter slots are full with the 1.8khz SSB filter,
500hz, and 250hz cw filters. The radio works great with only one small
paint flaw in the face plate. The model 260 power supply has no marks on

the face plate, and the model 263 VFO also has no marks on the face
plate. There are some scratches in the covers acquired through the years

but with the tilt up bales they are really not too noticeable. I have a
factory molded foam filled box for
the radio. And will over pack the power supply and the VFO for shipment.

All are welcome to drop by LaGrange, KY and pick these up if you have
the mind to. This station operates great and not only is it guaranteed
not to be DOA but I will offer the buyer a 3 day trial period from date
of delivery to return these in same condition for full refund (less full

shipping costs).

Pictures via email by request. No surprises here folks..the station
works great.
Check my feed back on Ebay with my call sign as my user id.

Price= $600 and I'll split shipping (lower 48) OBO

73 to all

Source record: 46313

My 962D antenna tuner died, so on January 8, 2002 I mailed the package from Ohio, priority first class mail, to MFJ. Since I insured the package, I was able to track it. USPost shows the package was delivered to MFJ on January 14, 2002. On Feb. 7, 2002 I received from MFJ a " product service form " letter stating the 962D has been received on Feb. 2, 2002 and will be repaired under warranty. It asked for 4 weeks for processing. Anyway, today is March 6, 2002, and I am still waiting. I hope that it will work when I get it back The warranty will be over in June 2002, so if there is any more problems there will not be enough time left for repairs under warranty.

3260. Re: How older trasceivers compare to newer ones?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-07 01:09:54 UTC
From: Floyd Sense <sentek@sprintmail.com>
Message-ID: <3C86BD9E.A7024B47@sprintmail.com>
Source record: 46314

A good place to go for features and performance is the ARRL website. In the product review area (members only), they maintain a matrix comparing the key performance numbers of all the transceivers they've reviewed, since about 1980 or so. Also, all those reviews are available online, and you can read them to find out about features. Unfortunately, the ARRL reviews are well known for sugar coating deficiencies in the products they review. Over the years, there have been some real dogs release, but you'd never know which those were by reading the reviews.

If you're thinking about buying used, and you're set up to fix complex electronics yourself, figure a potential $200-250 to get your newly acquired transceiver fixed. I've always bought second-hand myself, and in the past few years the majority of my purchases have had difficult problems. For a while, I thought that hams were just getting more dishonest in their descriptions of what they had for sale. Lately, I've reconsidered and think that most hams simply aren't capable of telling whether most features are working or not! So, it would be beneficial for you to buy second-hand only from someone who will take the rig back if it has problems when you get it.

Last, consider where you're going to get the thing fixed when it breaks (and it will!). At least one of the major manufacturers is running between 3 and 4 months for non-warranty work. That means you'll want to find an independent shop to handle the work.

If you insist on a second-hand rig, I suggest you do an exhaustive search on the Internet to see what the common problems have been with the rig you're considering. For example, do you know what problems to expect with the IC-751a, and what it will cost you to have it fixed? Use Google to search the newsgroup archives for this type of info.

Good luck!

Hi all
I just got a Kenwood Ts440s, but it's come without any books. I need a
copy of the users manual (and even better, the service manual).
Photocopy or scanned electronic version would be fine.
Will pay reasonable costs.

All I have are 706's--an original 706 in the house, MKIIG mobile. I have several FM
Broadcast stations I listen to when I'm on the computer--particularly a local jazz station.
Sounds pretty good into an external speaker. The MKIIG stays in the mobile, so I can't
tell ya much about the SWL in the house. The G works pretty well in the car as a gen.
coverage rec. I spend some time SWLing when I take my Dad to the Dr's, or am waiting
in the car at night for family members who are shopping.

Sounds like several things.
One is something in the vertical circuit.
I was always able to get something or other on the screen with ones I had in the past, even with no probes hooked up.
Unless you have access to a tube tester and have a schematic for it, you may be SOL.
I had a couple in the past that needed repairs, but I had difficulty getting schematics, and parts were another matter as well.

Nope! different socket pins. Requires a "Svetlana" socket. Elecrtically
the same, as in the filament voltage/ current, plate voltage/current, &
dissapation are the same.

While the rig has a software port, I'm not sure that there was ever any
software, per se, commercially made for the 735. It was introduced back in the
early '80s, the dark ages for PCs. From the manual, I got the impression you
were expected to create your own software for it.

You might do a Google search for the IC-735 + software...

I would be willing to bet you have RF leaking back into the radio by the close proximity of the ant. There is some descrete component there that does not like it. Try remotely mounting your duck on a one foot piece of coax and see if that clears your problem.
Good luck!

AM, FM and CW will give you steady carriers and steady-state S-meter readings. SSB has no carrier, only a single sideband, and will give you fluttery S-meter readings. When the person talks, there should be a reading that follows his vocal inflections; when he stops talking, there will be no reading.

Hello everyone. I am moving to a new QTH soon and would like to start off on a good note with the neighbors - in other words, would like to cause minimum RFI :)

Do low pass filters really help reduce most RFI? What frequencies are they appropriate for? All I've really seen are low pass filters for HF, none for above that. Any opinions would be greatly appretiated. Thanks!

Sure, just don't transmit on the radio that's switched "off" because, depending on the switch, that connection will probably be shorted directly to ground. (And if it's not grounded, you could feed some damaging RF into the front end of the other radio.) I have a four-position Alpha-Delta switch that I use for just this purpose. It's a great switch... almost no bleed between connectors, and the ones not in use are grounded. It's a bit pricey, but I consider my radios worth it.

I'm sure they do for some. I've had very mixed results, after using several different ones over the last 30 years. I used the Drake and Nye Viking low pass filters. With filters in line, I never saw much elimination of TVI, telephone interference, or even interference into broadcast radios! Thats only my observation. I no longer have one in line!

Hello could someone please tell what is a good way and what to use to clean a rig (TS-530) that was given to me by a smoker and I mean a heavy smoke. Rig works great just would like to get all the yellow stuff off of eveything on the outside including the knobs. Thanks..

Ross

3288. Yaesu FT-2400 Info/Manual

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-07 17:33:24 UTC

Message-ID: <a67u23$p0a$1@bob.news.rcn.net>
Source record: 46337

I just picked up a Yaesu FT-2400 at a Hamfest and I'm having a little problem programming memories. To those that own one of these things, I'd like to ask a question:

Does this radio have a back up battery that keeps them memory alive?

Does anybody have a left over manual after selling or getting ripped off. If so, I'd like to buy it. (copy?)

I emailed Yaesu technical support asking for price of a manual, but got no response.

>above that.

Low-pass filters are designed to pass the lower, HF-band frequencies, up to 30 or so mhz, and block any harmonics above that, that may interfere with tv reception of stations broadcasting from 56 mhz (channel 2), on up into the hundreds of mhz.

There are bandpass filters you can buy for specific vhf bands. Try AES, and see the bandpass filters made by DCI Digital Communications. They have band-specific filters for 2 meters, 220 and 440, that are designed to supress harmonics above and below each band. These guys get a little pricey, tho'...

Sometimes the filters help, sometimes they don't...

Your cheapest bet at your new qth is to just try to run as clean a station as possible. Good quality coax. Good connectors. Good grounding, etc.

I've used windex like someone else mentioned. Dial faces, outside and inside chassis cabinet, wherever the yellow is. Lots of paper towels and q-tips and I also remove the knobs and wash them in dishwashing liquid (soak for a bit then brush with a soft or sometime bristly brush (tooth brush) if needed in the knurls). I also go inside and spray contact cleaner on the band switches or any switch with contacts and use same electronic cleaner on the reostats on the volumn controls etc (from radio shak). Basically a real good cleanup to the bones.

Hi Guys;
I have for sale a Technicians special, A rare Swan 2 meter transceiver, FM-2X with matching bolt on AC supply!
The Supply seems to work but the radio does little except the meter needle moves :-)
I am not a tech but the supply, & the xtals are worth it alone.
The RCVE Xtals are:
146.94, .70, .76, .88, .43, .91, .67, .79, .82
The Xmit xtals are:
146.94, .34, .10, .16, .28, 147.42, 146.31, ..07, .19, .22
Here are some pics>>

http://www.baltimorepress.com/~wa2rqy/swanfm2x-1.jpg

http://www.baltimorepress.com/~wa2rqy/swanfm2x-2.jpg
Oh there are a few places where the last owner vibrotooled his call & a number :-)
Price is $30 plus UPS.
I've never seen one before so I bought it but have not the knowledge to fix it!

Thanks both of you for your reply. Yes, 518 is a typo of 718, and it was my mistake to think that 746 is a long discontinued model.

Anyway, given the differences in features, such as DSP in 718 and maybe different band coverage, are there major performance differences, in both receiving and transmitting, between older models such as 736, 745, 751 and the new entry level model 718. Do you think the free audio frequency DSP in 718 will make a significant difference?

Thanks again for your help.

Hi Floyd,

Thanks for your advice on potential problems and high repair cost of used ham equipment. I have bought some used stuff in last few years such as shortwave radios but no ham equipment yet. I did run into problems from time to time, but not to the degree you described. It would be difficult to do repair myself without sophisticated trouble-shooting equipment. So your advice will make me more careful in buying used. It seems that it would be saver to buy used stuff in local hamfest and get a return agreement.

I am not a ARRL member yet, but have read a few comments in eHam.net review web site.

I asked this same question on a sci.electronics NG and got an answer stating it could be tube 1V2 that is faulty. This tube doesn't really light up at all or put out any heat like it is working. Just for a second opinion, do you think this could be the culprit too? Thanks!

IIRC, an ARRL book I have somewhere talked about this and said that placing a few dryer sheets inside of the unit for a while should be able to rid you of the smoke smell. As far as the outside, read some of the other replies. YMMV

You have to 1st understand the mechanism that is causing the RFI. IF you radio or amp has significant harmonics thne, a low pass filter is appropriate. This is hardly ever the case today. Much more common is fundamental overload of the consumer device by your TX. Obviously no amount of LPF on the TX will help this . a HPF on the consumer device antenna input will prevent the RF from entering the antenna input and thus reucing the fundamental. It is not necessary to eliminate your signal, just get it back to the level that the consumer device's front end can deal with in a linear fashion. . If the problem still exists, ferrite chokes on speaker leads etc may help.

Doesn't take much, if it's directed right at the rig. I've gotten in
the habit of exhaling off to my left just to keep from getting a
buildup on the monitor or the windshield.

That said, on surfaces that can handle it, 91% isopropanol (often
available at Albertson's) will soak the film off pretty well. If the
surface won't take that, try extra strength (9% or better) warm
vinegar.

Im sure you didn't mean the dial itself Jack but for new restorers Don't use it on dials because it can remove the lettering. This mainly a real concern on the very old stuff but better safe than sorry. I just recently got an email from a guy whos wife was trying to help and used windex an a Lafeyette receivers dial were the lettering is on the glass and it removed it completely so be careful.

Hi Carl,
Even if you get one, it most likely will not work for long. This rig and the mobile version IC-245SSB were fatally flawed. Icom chose to use nickel eyelts as PCB vias. They never whetted properly and thus the PLL 's become intermittent. You can possibly put buss wire through the eyelets and solder to both sides, but I believe at least one is under an LSI making remvoal of the LSI necessary.
Good Luck.

I soldered all the eyelet's that I could access and that fixed mine. Don't
remember if there were any I couldn't get to.

Also I frequently have trouble with the cables and their connectors. I
reseat
the connectors and thing work again.

BTW if you part out your radio I need a couple of switches for the front
panel.

Although you can have the PLL updated by an Icom guru like Scott Malcom (http://www.angelfire.com/biz2/mts/) who did it for my 211 many years ago and the old dog is still cooking as well as it did when I bought it new in 1977.

Another comment.....

Low pass filters do work in as much as they will attenuate signals above the cutoff point but keep in mind that most of them are designed to operate at 50 ohms. If the impedance seen by the filter is not that for which it was designed, the results obtained may not be as specified.

If you have significant levels of RF at frequencies other than the one on which you are attempting to operate, you should track down the root cause and resolve the source of the problem. Even with a "clean" station, a low pass filter can help reduce the "legally acceptable" levels of emissions at undesirable frequencies.

73 and good luck...

They do what they're designed for.. eliminate harmonics of the fundamental. If you're running QRO CW, I'd recommend one regardless of your amplifiers specs. On SSB it might not help all that much. It's usually the interfered with device that overloads however.

3320. FT: Icom PCR-100 scanner + Thinkpad

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-08 02:55:33 UTC
From: Bill Bradford <mrbill@mrbill.net>
Message-ID: <slrna8ga2j.iqd.mrbill@ohno.mrbill.net>
Source record: 46425
Cross-posted to: austin.forsale,rec.radio.amateur.equipment,rec.radio.amateur.swap

I've got an Icom PCR-100 computer-controlled radio scanner (1Khz to 1.3Ghz, minus cellular frequencies), plus an IBM Thinkpad 365XD (P120, 1.4G, 40M, floppy & cd-rom, 800x600 color screen) laptop setup to control it.

Would like to trade for a "stand-alone" scanner that covers the same range. Would prefer something like a Radio Shack Pro-2005/6, or a newer trunking-capable scanner. Will also consider trading for other ham radio equipment (HF receiver, etc).

Can deliver in Austin, TX and surrounding area, or will ship if the offer is right.

Info on the PCR-100:
http://www.icomamerica.com/receivers/pc/icpcr100main.html

GE Portables
GE MPA VHF 146-162 full system keypad. Radio is as new and is almost perfect. The only flaw is the grip tape under the PTT button is peeling at the edges. Otherwise perfect. The next feature is, The radio is Key pad programmable. 16 channel scan and front face programmable. Has a like new battery and a good rapid charger. Also a belt clip. $500.00
GE MPA VHF Select 157 - 174 split. Nice radio 9 condition with battery and standard charger. I have it programmed down to 154 MHz with no trouble but will go no lower. $200.00
GE MPD UHF select model 440-460. 48 channel alpha-Numeric display. programmed on the 440 ham band and works on the local repeaters and GMRS. With Battery and standard charger. Nice 8 - 8.5 radio. $100.00 Also have 1 in about a
7 condition $95.00
GE MPD Scan UHF 440- 460. 48 channel Alpha-Numeric display. Also programmed on the hamband for testing. Works on the local repeaters and GMRS. with battery and standard charger. $125.00
GE PCS UHF 8 channel. I have this radio on the uhf ham band for testing and it works the local repeaters. with battery and charger. $95.00
GE MPS VHF Like new 10 channel. With new battery, new antenna, and a standard charger. $65.00
GE MPS VHF 12 channel. Set of 4 that talk to each other with all new batteries and antennas. All in a rack charger. $225.00
GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1 good battery. With 1 dual slot charger. $225.00 all 3 radios.

GE Mobiles
GE Phoenix SX VHF 16 channel with dual priority scan. Grey case with mic, speaker, and power cord. Tested working. $75.00 each. I have 2 complete.
GE MVS UHF 16 channel scan. With Mic, Bracket, and power cord. $125.00
GE Mastr II UHF 75 watt mobile. Painted handle. Drawer only $75.00
GE Mastr exec II VHF 75 watt mobile complete with accessories. $60.00 each
GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr II or Delta. $20.00 each
GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that I have seen marked
Ericsson) $65.00
GE Delta S Low band 42-50 100 watt mobile. Complete with cable, mic, speaker, and s500 head. Will make a great 6 meter ham mobile or base. $125.00. I use one for 6 meter and I have made contacts in Texas and Canada.
GE Ranger VHF 150.-162 100 watt mobile. Complete with cable, Mic, speaker, and s550 control head. This is a great public safety mobile or will tune to the 2 meter ham band. $175.00
GE S990 head. Looks new but I have not had time to test this yet. $75.00

GE Accessories
GE TQ2310 Suitcase Programmer. Ready to program Ge Phoenix radios and will program many other radios with different EPROM's for each radio. This one only has the Phoenix EPROM. Printer is working and has the manual. This is a nice unit ready to get you in to programming GE radios. I have replaced the power supply with one from radio shack but it is compatible with the original. $695.00
Mastr II control cable. $8.00 each
Mastr II head for mobile repeater operation. $5.00
Mastr II Mic. $5.00
Mastr II 8 channel tone boards. $5.00
Mobile Repeater cable for Mastr II. $10.00
Mobile Repeater cable for Delta or Ranger. $30.00. I have seen programming cables made from these.
GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5. $4.00 each. I have a large amount of 203.5,186.2, 179.9, 173.8, and 162.2. If you buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50 each.
GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each. I have 2 sets of EC/5C UHF icoms left and I bought 7 sets of 2C UHF Icoms = $30.00 per set. I have 5 sets of these left now.
GE Delta cables. These are the downloading type used with the S820 heads. $40.00 each
Delta mounting plates. $10.00 each
Ranger mounting plate. $15.00
GE S-550 / 500 and others mounting brackets. $5.00 each
GE MPA, MPD, MTL public safety mic. $35.00 each
GE PCS Universal Rapid charger. $35.00 each
GE MPA standard chargers. $20.00 each
GE MPA Rapid chargers. $30.00 each
GE MPI desk charger with wall transformer. $10.00
GE MPI Rack charger, 8 position. 25.00
GE MPI Mobile battery charger, Rare. $20.00
GE Battery discharger analyzer. For MPA, MPD batteries. Attaches to a rapid rack charger with a DB 15 cable and uses a MPD body to attach a battery to. Has LED readout in display area of MPD body to tell discharge rate. Another rare GE goodie. $45.00
GE shoulder strap like new, attaches where belt clip is. $15.00
GE Belt clips. $10.00 each
GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card and power supply / speaker. $300.00
GE Mobile Vehicle Adapter For MPA, MTL, MPD, and TPX. This unit charges your battery and turns your portable into a mobile radio. (Convert a Com) With mic, speaker,
and power cable. $100.00

Other Radios and Accessories
Marconi UHF portable. 16 channel scan with NOS battery. Made by Midland. $75.00
Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$75.00
Motorola Mitrek VHF high 110 watt drawer only. $50.00
Motorola S1350C watt meter. with 10 watt 500 - 1000 MHz element. $65.00

Motorola Adapter for MX radios for the 1801 suitcase programmer. A and B prom. $175.00
Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of crystals for each radio. Also have a working battery and charger for each. I have 4 of these. $50.00 all
Motorola UHF Convert-a-com Amp. 5 in 40 watts out. $45.00
EF Johnson 242-8600, 800 MHz LTR I have 4 of these. $25.00 each
EF Johnson Challenger UHF 80 watt trunk mount, 99 channel Alpha-Numeric head.$225.00
Kenwood TK 940, 800 MHz dash mount radio. $100.00
Uniden SMS 825 ts, 800 MHz Dash mount radio. $75.00
Radio Shack Pro 50 20 channel direct entry portable scanner. $25.00
MRC 100 Repeater controller in rack mount. $100.00
Voter from IMTS phone system. 2 rec and 2 tx cards. $40.00
Maxon Rapid Rack charger for 0510/0520 radios. Think they will work with the sp2000 as well.$35.00
Antenna Specialists on glass 440 antenna. New old stock. $22.00
Antenna Specialists on glass 220 antenna. New old stock. $22.00

Consignment section
This area is for a few friends who like those other radios you know "Motorola" They are good people and I will pass along any trades you may wish to make.
Motorola X9000 VHF 50 watt, Alpha-Numeric head, Siren complete. $425.00
Motorola Maratrac VHF 100 watt 16 channel head, Never mounted in a vehicle.$375.00
Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each
Motorola HT1000 Intrinsically safe, Re-cased looks new. 16 channel scan with charger. $425.00
Motorola P200 UHF high power. 6 channel. $150.00
Motorola MT1000 UHF 16 channel scan. $250.00

Want List not FS
Extra parts for suitcase programmers. Data modules, Printers, cables, proms, anything you have extra. MPA or MPD portables what do you have and what do you want for them?
Johnson scorpion program cable. PSX200 UHF mobiles.

Terms
All prices are plus shipping from 40201. All items are used unless noted and only have a no DOA warranty if I say it works. If I say not tested your on your own. If I think it may be bad I will not list it. I take cash, Postal Money Orders, Paypal, and checks but I hold them for up to two weeks to clear before I ship. If you have a question E-mail me.

Hi:

Cash For 440-470 Mhz Saber 1's Any Condition

I am after a couple of Motorola UHF 440-470 Mhz
Saber 1's (Any condition) but perefer working.

These radios are planned to be parted out for service

The outside case condition un-important, Lables
Missing OK, Broken or Fixers on a case by case
basis.

Please let me know what;ca have, and I can offer
pehaps a trade in for a working later model radio
if you have a couple of these that are availible

Monty

3327. Re: Low pass filters, do they work?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-08 03:59:03 UTC
From: JB <ac6tk@nospamcybertime.net>
Message-ID: <a69bnh$264c$1@madmax.keyway.net>
Source record: 46432

VHF radios often have low pass filters built in (as do most HF radios)
so yes they reduce harmonic content from your transmitter, and they
keep harmonic energy from transmitters operating below 54 MHz from
interfering with TV's and other communications gear. But there may
be other reasons for interference. I do use external Low pass filters
on my HF gear, but I use various other filters on VHF/UHF radios to
keep them from causing trouble with each other.

In residential areas (we leave off of multi-transmitter sites for this
discussion) Front end overload is most often the problem for
television sets. The Two meter ham band is between channels 6 and
7, so the front end is often left vulnerable to energy there. A High
pass filter on the TV will usually take care of HF energy problems
from transmitters operating below 54 MHz, but you would need to add
a reject filter on the TV to keep a clean but strong 2 meter signal from
overdriving the TV's RF stages. The 220 MHz band is just above
channel 13, so there may be trouble there too.

It really isn't because of any fault in the transmitter, because there are
many other transmitters between channels 6 and 7, like FM Broadcast
and commercial Land-Mobile transmitters, so there is no good excuse
for the TV to be responding to anything but TV signals, but the best
defense is avoidance. Keep your transmitting antenna as far as
possible away from the neighbors TV antennas and feedlines, and
you will probably be OK. My 2M transmit antenna is only 1 ft above
my TV antenna, so there is some effect on my TV from even 10 watts
on 2 meters, but there is no effect on my portable TV with its built in
antenna.

Picked up in a partial trade, a like brand new BC245xlt Trunking handheld scanner. Comes with a leather carry case, two batteries, charging craddle so you can always have a battery charged up, wall and car charger.

No manual but you can find it on the net.

The extra battery and craddle is just bought last week and they are still shrinked wrapped in the package.

I don't need this. I have enough scanners already.

Price: $160 shipped COD or PrePay from Las Vegas

Does anyone know where I might get my hands on a wiring diagram of the Radio Shack DX-160 Short Wave receiver? It lights up and the audio amp comes alive but that's about all. Something is definitely wrong here and I need the road map to figure out where to look for the trouble. Thanks, Justin

3331. Re: Cleaning rig after Smoker

One thing to consider along with the exterior, is of course the interior of the rig. How do you clean the smell off from the inside of the rig? I am sure that the film and smell is on the inside of the rig. What solutions are safe to spray on the inside of the rig?

You can use either a vacuum or a pressurized spray to remove dust buildup but.....

Correct on that, use it on the outside glass window only, not the side where the dial lettering is painted or stenciled on.
I myself, way in the beginning did that to an old Philco dial and lost all the dial labeling almost with one swipe of the towel.. I think I spent the next several hours redrawing with a selection of ink/felt tip markers the missing part of the dial, did it so good had to really check it twice to see it.

Sorry Jack

I have called them and been given promises only. Bought one of their
2 meter SSB only rigs after having good luck with their 6 meter model.
Unit was only putting out about 1 watt at best (same readings on dummy
load and with an antenna). Sent it there for service twice and it
still doesn't work. Their final word was that the problem was with my
antenna (which gives me no problems with the other radios used on it
for comparison). Figured it was best to just let it go as the whole
process had already taken about 4 months.

When it was sent back initially, it was sent in with the power plug,
microphone, instruction manual and inner packaginng. Was returned
minus the power plug (no real biggie) and minus the manual - which
repeated calls & letters requesting replacement fell on deaf ears, and
without the inner packaging. Oh sure, they were pleasant on the phone
- but in terms of fixing the problem they fell short of any
expectations.

In fairness, I still enjoy their 6 meter radio, even though I now also
have a Kenwood all-mode 6 meter radio; makes a great lightweight
package to take camping. However, it seems that buying from them is a
crap-shoot in terms of 'product integrity' and customer service; in
other words... "I'd not buy their products again."

Message-ID: <a69lib$cl4lb$1@ID-124126.news.dfncis.de>
Source record: 46442

In many cases it is not harmonics of an HF transmitter which causes RFI or TVI. It is the transmitter's funadamental frequency, using brute force and ignorance, which blasts its way into other equipment, from audio up to TV.

Interference to TV is often caused by the TX frequency being picked on the TV antenna downlead. 7 MHz is a likely frequency because the average length TV downlead acts as a 1/4-wave vertical. You can have amps running up and down it!

It gets inside the receiver at high level and causes intermodulation. A low pass filter following the transmitter may not have the slightest effect. In any case, in modern HF transmitters a low-pass filter is already built-in.

The fault usually lies at the receiving end. Poor design allows the receiver to be sensitive to frequencies which it is not intended to receive.

In my opinion, the best thing to do when setting up a station is nothing. In all likelyhood there will be no interference. If it works don't fix it !

If there IS any interference then, purely out of the goodness of your heart, wind a few turns of the TV downlead around any sort of 2" diameter ferrite ring, near to the receiver. Or in the mains power lead.

If that doesn't work, only then think about LP filters.

Would hooking up two P/S in parallel add the amps? Example a 7amp and a 12amp= 20amps?

At the moment I've been using a 7 and a 3 amp together with good results, but is there a downside to this?
Could something be damaged?

Might sound like a dum question but Im a ham on a budget, and got a couple of P/S laying around.

Thanks in advance

Gil

Greetings,

I have for sale an original Optoelectronics Optolinx interface. This is the interface that will allow computer control of the AOR-8000 portable scanner (with proper cabling - not included) as well as just about every computer controllable Icom receiver. It also has a built-in dataslicing circuit that allows it to decode various HF/VHF/UHF/800/900 digital modes including ACARS, Trunker, etc. Unit is in very good physical and excellent operating condition.

Reason for selling: No longer in use.

Price: $85.00 shipped UPS Ground US only on receipt of US POSTAL MONEY ORDER ONLY! I will provide you with the UPS tracking number when the package is enroute.

More info on the Optolinx and its capabilities can be found by clicking this link:

http://www.optoelectronics.com/optolinx.htm

Please respond to my e-mail address if interested. Thanks for reading.

Here's something you might consider. Don't know if I am that brave, but..... I recently purchased a Tektronix 475 oscilloscope. It is 20 some years old and I would like to refurbish it. It is at least as complex as a ham radio. I have done a lot a research on restoring oscilloscopes and was somewhat surprised to find that Tektronix, as well as repair facilities, simply wash them with water and detergent! Basically, they use a pressure hose that draws the detergent in with the water. After it is clean, they bake the o-scope in an oven at about 135 degrees F for 3 to 4 days. Like I said, I haven't got up the courage to try it, and I don't have a low-temp baking oven, but that's what the big boys do. If you want to read all about it, subscribe to TekScopes in the Yahoo Groups. You will find everything you ever wanted to know (and more) about cleaning electronic equipment.

You could try the Switching Power Supply's that MFJ Sells.
I have both of them and they work very good.

Local companies around here that salvage flooded electronics do the
same. Wash them out, dry them thoroughly and good to go.

Just watch paper caps... And do not apply power until TOTALLY dry.

10a is getting almost to the range where I recommend a battery.
30a, as w6dkn alludes to, is in that range.

Usually you need to spec a power supply based on the surge rating.
Or do you figure your surge is under 10amps, so if the supply can do
that continuous you will be safe?

With a battery to meet the surge demand, your power supply only
needs to meet the average demand plus just a little bit extra to
keep the battery charged.

Just a couple things:

The output voltages need to match so each takes its share of the
load. Also, put a diode on each output before combining to let each
supply's voltage regulator do its thing. Schottky diodes have a lower
voltage drop, use them if you can. It also helps to have an
adjustable supply to make up for the diode voltage drop.

I'm currently using five 9-amp switching supplies with good results.
Each runs nice and cool.

Well, you can get the transparent film for making window decals at
WalMart. A good inkjet printer will do quite well with this stuff,
then you cut it to size, and stick it on. (It's static-type, not
actually sticky, so you can remove it easily) Might also be good for
overlays on slide-rule dials if you want to mark your favorite
frequencies, and ISTR at least one guy making nice looking front
panels by printing them up on clear inkjet sticker film, then putting
another layer of the same over that as a protective lamination.

Good new! The 962D arrived via UPS this afternoon. Looking at the "product service form " they replaced two diodes. The tech fixed the problem on February 27, 2002. The unit was shipped out on March 6, 2002 and it arrived in Ohio on March 8, 2002. In my opinion, they fixed the problem, but as far as I am concerned, two months from the day I shipped it is to long. To MFJ, two months might be good service! Anyway, it is time to get a stand by tuner, just in case.

You can't tell the age of ICOM gear by the serial number, it has no chronological coralation.
Typically, at serial number above 1900, has all the latest factory production updates.
However, I have owned a very early unit (13XX) and it had no problems, and ran great, and is still running great, and nevern went back to the factory.
True, that early serial numbers have had a higher level of problems, but that does not mean that a very late unit won't.
If an early unit doesn't exibit the "known" problems for that model, it's not likely that it will need to be updated, and don't expect ICOM to do the update for free, if the rig doesn't show the problem either.

You might need to do a complete "reset" of the radio. I have used the computer programming for the FT-2600 and it will let me enter a out-of-band frequency. Then again you may need to do the out-of-band mod to enable frequency entry.

I have not looked at this radio up close yet. The county sheriff bought one for the local amateurs to have in the LEC so hopefully I will get the "hands-on" experience!

I have for sale a Corsair I station complete with matching power supply and the matching external VFO. The Corsair was completely gone through by the factory in March of 2000. The PTO was rebuilt and other upgrades

and part replacements were done at that time. The radios first IF crystal filter has been upgraded from the stock 4 pole to the model 220 8 pole filter. All filter slots are full with the 1.8khz SSB filter, 500hz, and 250hz cw filters. The radio works great with only one small paint flaw in the face plate. The model 260 power supply has no marks on

the face plate, and the model 263 VFO also has no marks on the face plate. There are scratches in the covers acquired through the years but with the tilt up bales they are really not too noticeable. I have a factory molded foam filled box for
the radio. And will over pack the power supply and the VFO for shipment.

All are welcome to drop by LaGrange, KY and pick these up if you have the mind to. This station operates great and not only is it guaranteed not to be DOA but I will offer the buyer a 3 day trial period from date of delivery to return these in same condition for full refund if not as described
(less full shipping costs).

Pictures via email by request. No surprises here folks..the station works great.
Check my feed back on Ebay with my call sign as my user id.

Price= $600 and I ship (lower 48) OBO

73 to all

I need a microphone that will work on the FT-901 series radio's. Desk or hand mic.

This is the older 4 pin type mic.

I also need the inter-connecting cable that goes from a FTV-901 transverter to the FT-901 transceiver.

Can anyone help ??

Thanks

Tom radioactiveham@yahoo.com

I have 2 sets of 811A tubes for sale. One set is the original 4 from my Ameritron 811H amplifier. The second is a set of Chinese manufacture and have less than 4 hours on them. The Chinese set allow the Ameritron to run its rated power easily. The originals have nothing wrong with them. The Chinese set became available to me and I bought them as a spare set. Put them in the rig to try them out and left them in since. I will sell all 8 tubes for $100. plus shipping to your QTH. Reason for selling....want to try a set of 572Bs. Thanks, John - K7RZF - Portland e-mail k7rzf@attbi.com

Get a battery, you most likely have a charger. Get the biggest one you want, you can get a really good one for around $50. They are safe too, theu will never put out too much voltage, you can use them when the power goes off, you can charge them with your car, and they act like very large capacitors when connected to a charger. But they will only last about 5 years.

Source record: 46251

I bought this scanner a while back in order to repair it.When it was almost new the scanner was mounted in a moble,but for some reason the metal case came in contact with circuit board.This caused a couple of foil strips to be burned off the board,I bypassed the strips with some wire and was able to get the scanner to start working again.It will pick up 806- 956 mhz,but for some reason it will not seem to receive anything below that,but it will scan it.This will make a nice project for someone has more time to mess with it.The scanner is in descent shape and I have the manual for it and the power pack,but it does not have the schematic.I am asking $30.00 for it plus shipping.There is some very minor rust spots on on one side as you can see from the pictures: http://angel-pal.tripod.com/scanner1.JPG

Just purchased an Icom phone patch that matches the older IC-211 and
IC-701 radios. Looks like it had an option for a power supply.
Anyone have any idea what the Icom part number was for this patch?
There is nothing on the unit other than Phone Patch. Looking for
manual/schematic too if anyone has one to sell, copy, etc.

Call Icom Technical support and ask for a PP1 manual. The phone patch
was built for Icom by the Wm. Nye Company. He no longer does any
service of the phone patch. The PP1 manual is about 6 or 7 pages with
a schematic. Icom Technical support is available at 425-454-7619. It
was built into a SP-3 speaker case, no power supply ever fit into that
case I am aware of.

Source record: 46254

Thanks Gary. I will give them a call. I think I solved the power supply mystery. The case for the phone patch came directly from the IC-701PS power supply. Every piece is exactly the same, except for the plastic strip across the top for the controls. When I looked at the back of my IC-701PS the rear plates are identical! All the extra holes I thought might be for an optional power supply are the holes used by the IC-701PS. They just left them empty for the phone patch.

There also appears to be more than one version. Mine has the OFF/Patch, Xmtr Gain, Rcvr Gain and Null controls in a straight line from left to right. One sold recently on Ebay shows OFF/ON, Rcvr, Xmtr and a Mic jack. The two center controls are higher than the outside ones. It does not look modified.

Thanks again for the information.

I know a guy that used to restore old collins, etc rigs. He used to
take them to the car wash and spray them out. I'm not crapping you
negative. Then let them dry a few days. He knew what he was doing, and
swore it didn't hurt the stuff. It does still make me a tad nervous
though. I think the best thing for normal radio cleaning is windex.
I've never seen it hurt paint "so far", and it takes off cig resin
like melting butter. You can see the crap just run down the side of
the radio when you spray it on a bad one. I smoke here, but I blow it
away from the radios, and I also keep a window A/C going next to me
all the time to constantly clean the air. I don't get the gunk packed
goo rigs that many do, but I'm sure you could still probably smell it
from one of my old rigs in a no smoker house if you had a sensitive
nose. Most non-smokers can smell cig resin from 30 yards away it
seems. I've heard a dryer static strip thingy can help kill the smell
on the inside of a rig. I once had a heath hw-100 that was owned by a
pipe smoker. It smelled like a pipe for months and months after I
bought it. But it didn't bother me. Actually it didn't smell too bad.

for cigarette crud, Formula 409 works well

when I took over as CE of a radio station years ago, the AM console had not seen a cleaning for over 15 years, it took me 3 nights, 2 GALLONS of 409 and 4 cases of paper towels to get it clean

as Mark says, the crud just literall 'melts' off and runs down the sides, after you wipe it off you think its clean, but hit it with another spray and more seems to rise up out of the surface

we also used to immerse tape cartridge machines in a 5-gallon bucket of water + Dreft detergent after taking out the motor, let them soak for a day, then to the car wash for a rinse, then dry them over a heat register or out in the sunshine for about a week

and I once had a GE UHF Mastr II radio that was installed in the spare tire well of a late 70's station wagon, the guy spilled a 5-gallon can of #2 diesel fuel in the back, the radio was completely submerged for over a day; a careful disassembly, scrubbing all boards including frame with dishwashing detergent in the kitchen sink fixed it, although it took 3 tries to get all the diesel fuel out of the RF preselector for the receiver

if it's unuseable because of the crap on or in it, you literally have nothing to lose by what seems to be radical measures

I keep the left paddle depressed for the 3 dits and wtihout letting up
double tap the right one.

"Ken" <cprstn54zz@att.net> wrote in message
news:3c823052.17314281@news-server.optonline.net...
I have just started with iambic paddles and am doing OK, except for
the SK prosign. I am finding the timing of the final dah-di-dah very
tricky if I try to squeeze it out. Do most folks squeeze it or just
do it single-paddle style?

I couldn't find anything on the web about iambic sending of prosigns
or punctuation. Any list of tricks out there? I read K7QO's article.

The PP1 was just a memory when I arrived at Icom in 1989 so there very
well could have been two versions. I do know there was one with a
built in amplifier to properly drive the older transceivers like the
701, 720 etc.

Hi guys -

sri fer crossposting (in alt.boatanchors also)

I cud use a manual or just some simple intstruxions for Marconi VTVM TF 1041C - I need to verify its function, and I need to learn how to use the thing for the occasional basic measurements in tube rigs.

Searched the net , found the manual merchants, but don´t feel like shelling out like 15USD for the manual. Can you help?

Tnx, it´s appreciated :-)

Cheers /Rick, SM7SCJ

That's what I was doing when I was doing it wrong. I found timing it
that way tough.

When the light when on about the di-dah-di-dah, I realized that it
could be done left (di-di) - right (di-dah-di-dah). Just one press
and one squeeze.

You're lucky. The general rule is never use a normal lead-acid battery in a confined area. You would be better off to use SLA (sealed lead acid or gel cell) batteries in this application.

Hello I got all kinds of stuff for sale......

Yaesu FT-221R 10 watt 2 meter all mode transceiver with instruction manual, AC & DC cable (not working) $85.00

Yaesu FV-401 External VFO nice condition with connecting cable, and manual $50.00

Yaesu SP-401P with manual nice condition $40.00

Bird 43 watt meter works great no Bird name badge $90.00

KLM 160 watt VHF 144 amplifier 10 watts in 160 watts output $90.00

AEA PK-88 TNC with manual $40.00

Henry Radio 3K stand up console amplifier with tear drop meters, one missing with manual wired for 220 volts, not tested , as is , pick up
ONLY Los Angeles.....$280.00

Swan 350 with Electro-voice 727 desk microphone, and matching Swan 117-C power supply and power supply with manual
works Great.....$149.00

Gonset GSB-201 desk amplifier runs 4 - 811's with manual wired for 110 volts $270.00

Kenwood R-599D Receiver works, and looks Great with manual $139.00

Kenwood T-599D Transmitter was tuning OK, and then stopped . Nice condition with manual $85.00

Kenwood MC-50 desk microphone with manual $49.00

Kenwood YK-88CN 270HZ C.W. filter on 8830.7 KHZ.
This filter will fits these models:
Kenwood TS-130S,130SE,430S,440S,530S,530SP,830S,670S,660,and the R-5000. .....$60.00 shipped in the U.S.

Kenwood YK-88C 500HZ CW filter on 8830.7 KHZ.
This filter will fits the following models:
TS-120S,130S,130SE,430S,440S,530S,530SP,670S,180S,830S,660, & R-5000..... $60.00 shipped in the US.

Kenwood TU-4C (new in the box) is the Tone Encoder for the Kenwood TW-4000A 144/440 MHZ dual band mobile radio .....$45.00 shipped in the U.S.

KENWOOD CK-18 WARC BAND COIL PARTS KIT FOR THE TS-180S (New In The Box),(UNUSED) This will add 12, 17, 30 meters to your Kenwood TS-180S, instruction manual included.....$65.00 shipped in the U.S. ONLY

Kenwood IC-10 (set of two chips) these are required for computer control when using a Kenwood TS-440S, and R-5000 .....$49.00 shipped in the U.S.

With your PP1 ID I was able to find and download the instructions for the PP1 along with schematic. The schematic was hand-drawn, but shows the amplifier you are talking about. It uses an LM324 and 386. Mine has only one LM74JCN IC. I think. I hope Icom will have the instructions and schematic for the non-amp version. Thanks again.

Spot on, Dave -- though I expect a good bit better than 5 years out of a battery.

My "youngest" battery, a Sears deep cycle item with a 2-year guarantee, is five and a half years old now and still doing fine. And I've got a couple of gelled jobs that I picked up used over 12 years ago; they're also still working fine. I don't do periodic load tests on my batteries, but they seem to hold charge well, and the hydrometer readings on the non-gelled items continue to look good.

I think you're misinterpreting the regs. Lots of amateurs make money
off ham radio (although, note that that doesn't seem to be what Amy is
asking for). It's not unethical, nor illegal.

The regulations prohibit making ham radio transmissions for money. They
don't restrict your listening.

See:

Sec. 97.113 Prohibited transmissions.

(a) No amateur station shall transmit:
(1) Communications specifically prohibited elsewhere in this part;
(2) Communications for hire or for material compensation, direct or
indirect, paid or promised, except as otherwise provided in these rules;
(3) Communications in which the station licensee or control operator
has a pecuniary interest, including communications on behalf of an
employer. <snip>

Hey there,

I'm running an amateur radio station this summer at a summer camp. Does anyone know how i can get a telephone hooked into my system?
This would permit me to broadcast live callers for call in shows, or contests.?

If anyone knows what this device is called or where to find one, please let me know....

Thank you all,
Ari

Ok being the original poster for this topic I thought I might let you all know how it turned out. First I took off all the knobs and soaked them in soapy water as someone suggested worked great. Then I took some of that foaming bathroom cleaner and boy did that stuff do the trick without hurting the finish at all and when I had the resin off I used a damp cloth to wipe off the excess. Use Windex to clean the clear plastic and then wiped a little Pledge over everything for nice shine. Looks like brand new (almost). Thanks for all the input..

Ross

I'm quite new at this radio thing.... Why would something like that break
any rules?
Isn't that a standard thing to do on the radio? Have callers?

If you are planning to actually use that radio in CAP service, remember that
it may not
meet NTIA specs. All CAP radios now MUST meet that criteria--including
those of its
volunteer members. Check the National Hq. website.

Mike -- How about a cheapie -- 9 foot of wire hung vertically from a tree -- use insulators at the ends, --- center fed with coax running 90 degrees from the antenna for a ways. A ham here in San Diego worked 24 states (including Alaska and Hawaii) running only 10 watts of power! Also some Caribbean stations.

6M is highly dependent on propagation, beams and power help but you can work a lot when the band is open with a wet noodle and a few Watts..
Your mileage may vary

Perhaps you could tell us what make and model of radio you plan to use and what frequency you will use for broadcasting this show. If your answers continue to be vague, you will confirm the suspicion that you are a troll.

I would suspect that Ari is going "on the air", playing disc jockey with a low power am or fm transmitter intended to broadcast locally to the other kids in tents/cabins in the immediate vicinity? Or course I don't know where the telephone callers would come from seeing that he won't be broadcasting very far. Perhaps the camp kids all use cellphones!
Come on Ari, tell us a little more.

What you suspect is true. Those are my intentions.
The camp has its own internal phone system, where there are telephones in
different locations around the camp.

What does a troll mean in this context?
Am I supposed to get some sort of permit even though the signal can barely
reach the whole camp... nevermind anyone outside of the camp..

I appreciate the help
Thanks,
Ari

3458. Re: New! - EQUIPMENT PHOTOS -

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-11 00:10:08 UTC
From: CJ <chas@hotmail.com>
Message-ID: <u8ntf6ja82f1b7@corp.supernews.com>
Source record: 46113

Hello laborkei,
The eQSL cards which use the "mail-a-card" eQSL service are acceptable for DXCC according to email received by eQSL from Bill Moore at the DXCC Desk. This same email is posted at the eQSL site. The ARRL "position" posted on their website was not written by Bill Moore...furthermore it specifically states the acceptance criteria for mailed cards.

This is a controversial subject right now....ARRL has changed their "official position" since the initial 08-Feb-2002 "acceptance email" about as often as I have changed my underwear...

--
Thanks for the nice Usenet message...

> How does the price and availability compare to regular automotive or deep
> cycle batteries?
>
A 50 AH gel cell is probably a little over twice as much as a regular car battery - but we're talking safety issues in a contained space. If I used a regular lead-acid battery I'd try to locate it in the garage rather than in the house under the radio bench. Also, a car battery is not designed to be discharged very much or very often. You'd probably be better off with a deep cycle if you plan on actually having the gear running from the battery (no ac power) very often or for very long.

3461. Question: knwd tm-741 & 742 heads interchangable??

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-11 00:40:32 UTC
From: Dust Might <alfaromeodiscovolante@hotmail.com>
Message-ID: <42Ti8.11058$Vx1.840364@newsread1.prod.itd.earthlink.net>
Source record: 46116

I've both Kenwoods, the TM-741 (has the one-piece face) and TM-742 (has the 2-piece face). Both models are designed to
be used with the DFK-3 separation cable for mobile installations, just the display and controls on the tm-742 can be
further separated. Since both the 741 and 742 have the same separation connectors, using the same 4 wires, both are
tri-banders, they both use the same UT-(50,144,220,440) modules... can I take the *leap* and assume their heads are
interchangeable??

Thank you

How about explaining exactly what you are attempting to do. Flea power transmitter, etc..etc??? What frequency, etc? You can do that with 1 mw. I think your reference to "amateur" confused, and threw some of us off.

I purchased a LDG Electronics AT-11MP autotuner at the Charlotte hamfest this weekend. I had purchased a MFJ949E 300w HF Tuner II only weeks before learning about the AT-11MP. This tuner is brand new -- in service on a TS2000x w/ 100w only 3 weeks. I've replaced the standard knobs with ones that are slightly larger and MUCH easier to turn. The original's are also included (set screw). Looking to offset some of the new AT-11MP.

In the box with wrapping, packaging and manual. I saved everything.

New: 119.95

Will sell for 80.00 plus shipping

Contact: KG4RAG
Robert Fulton
robfult@carolina.rr.com

Best wishes,
-Rob

3466. eQSL Acceptance by ARRL? NO !

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-11 02:26:08 UTC
From: laborkei <laborkeiNOSPAM@hotmail.com>
Message-ID: <3c8c1994$1_2@nopics.sjc>
Source record: 46121

Hello Charles,

Yes this has been a controversial subject !

I got tired of reading on the pro's and con's on the email reflectors,
and called the ARRL to get the straight story. The link I sent you from the
ARRL spells it out clearly.
I have seen the note Bill Moore sent the folks at eQSL, and it is just a Q&A
going back and forth. I think he is being taken out of context, and the
posting on the ARRL site was intended to clear this up.

I don't have the email to cut and paste it in this posting from a number of
the ARRL Officers,
but it basically said "NO eQSL.cc by any means, Period !" Numerous ethics
and security issues with this website they said.
The procedure of Mailing eQSL's does not qualify using the same rules as a
QSL Manager.

Until this issue is resolved, eQSL should remove the reference of ARRL
approval from there Web Site because it is mis-leading Amateurs.
Why risk getting a bad reputation for taking peoples money, and you find out
when you get your cards looked at that they are not accepted.
Just wait until all the emails start getting out that... "I went to xxxx ham
fest, and the ARRL did not accept the cards I paid for from eQSL.cc"

Just one side note..
The 3905 Century Club Group voted recently that eQSL's are not accepted for
there awards as of April 1st., 2002.
I am glad they took solid ground on this subject.

You better go check your drawers.
I assume you must be one of there Volunteers?

Geez, people...give the guy a break. Who said he was a ham? Sounds like he's going to be running a low-power broadcast station, not a ham station. Believe it or not, not everybody in the world knows about ham radio. If it's not professional it must be amateur, right? But amateur radio does not necessarily mean ham radio.

And besides, I'll bet there are thousands of ham ops who don't know how to hook up a phone patch. How many hams run phone patches any more? Huh? Not very many. I've been a ham for over 40 years and I've never run a phone patch.

Geez...what a bunch of anal-retentive old farts...

Hi,
That is progress? Licensed hams who can't even run phone patch and
what's their use in an emergency then? No code, no technical know-how
even at bare minimum level. Ham radio as I know is long dead. You must
be old fart too, been ham for 40 years. I was not sarcastic, I am just
sad for the degradation of king of hobby.
What hams do these days then? Just ask around questions here and there?
Everything has to be spoon fed. They're not interested in learning.
Just want someone to do it for them. Geez-whheez!
No wonder I quit teaching classes, elmering. They just wanted me to do
everything for them. Not interested in learning and doing themselves.
This is not only in the world of ham radio. It's everywhere!

You have not perhaps considered that in some places - like here for example - a phone patch is illegal!
Just possessing the equipment here is enough to lose your licence permanently.

Greetings,

I have for sale a "used once" Radio Shack DX-398 (Sangean ATS-909 clone) portable shortwave receiver. Unit is in mint condition with original box, case, owners manual, and an ATS-909 fact sheet printed from internet information. Sells new for $239.95 and up.

Reason for selling: I purchased it at the end of September, 2001 but have only used it once. Liquidating for other radio purchases.

Price: $150.00 shipped UPS ground USA only upon receipt of US POSTAL MONEY ORDER ONLY! I will provide you with a UPS tracking number when the shipment is enroute.

Please contact me via e-mail if interested. Thanks for reading.

What problems ? I've read the QST Review. It did
mention some things. But theer are many reviews by
QST out there wherer they find something on the test
rig, return to factory, and then report things are better
or whatever. Would be grateful to know what problems
to look for.

TIA,

Andrew

Why don't you explain exactly what you are doing...
What kind of equipment you plan on using..
It is clear that you are not a Licensed Amateur because they would no better
to ask this kind of question.

I've been through a couple of GH62 antennas.
They offer great gain, but are easily destroyed by wind.

WELL SAID M.M.

I myself am an Extra Class operator and I bought a phone patch but, I've never hooked it up.. I plan to one of these days but, that's a "one of these days" project.

I think the poor guy that started this thread was just trying to find out how to link the camp phone system into his broadcast station so others could hear the requests being made.

As for Tony Hwang, it's guys like you that turn more people AWAY from the hobby than bring them in.. It takes a lot to bring a new ham into the hobby and to have the "old-timers" like you sit around and talk about how the hobby has degraded over the past few years is total BS..

The hobby has opened up quite a bit lately with the new digital operating modes and advancements being made thru contacts over the internet.. It's easier to look up an antenna project on the internet and make it from those specs than to sit there with a roll of wire and try to design it yourself.. But, I'd rather someone build one of those "ready-made" antennas and get on the air than beat his head against a wall tryin to figure out something that's already been down a thousand times..

Time to throw in the microphone Tony, nobody wants to hear your bellyaching anymore.. Ham radio is alive and well and will continue to thrive regardless of what you have to whine about..

Ari, I wish you luck in your camp this Summer and I hope you find the answers you might need.

3485. New ICOM 2100 H freaks out!

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-11 22:57:18 UTC
From: Grover <rgreene@pivot.net>
Message-ID: <3c8d33b5_2@corp.newsgroups.com>
Source record: 46140

Santa was good to me and brought me a new 2100H, and then I won another one as a doorprize at a hamfest.

Got the software - after much difficulty - to clone and program.

Did some programming on unit 2 (base) over the weekend, and left it running - scan - today. Got home - display is flashing alternate green and amber - no response to buttons, and no numeric display. Powered off and on - all is ok for a while, and then display goes blank. Left it alone, and display starts flashing again - alternate colors.

Any ideas? Do I have a dud? Any experience with ICOM warranty? Both units are less than 90 days old.

Thanks in advance.

This rig is in excellent condition throughout and it's priced for a quick
sale. Diodes which disable WARC bands have not even been removed.
No signs of wear whatsoever. MC-50 Mic and original manual is included.
Will let it go for $415 including shipping to lower states.

You can see the rig at http://www.90-minute-courier.com/kenw830s.htm

Does the 101 have an old octal tube socket for the ACC socket, or a Cinch connector? If it has an octal socket (or any number of pins in that format) then pin 1 will be the first pin counterclockwise from the key as you look at it from the outside, pin 2 would be the next pin counterclockwise.

For sure, the gel cell batteries cost more, and I've never seen any as large as the "automotive" lead-acid batteries.

I don't see keeping one, or several, in the house as a problem. "Confined space" in this case basically means a small, poorly ventilated space, like a box. I keep my batteries under and on the radio bench in the cellar - and that's safe.

I don't use regular lead-acid car batteries myself - only deep cycle. But as I understand it, a regular car battery will do just as well if it's kept topped off. It's repeated deep discharges that kill them (as Bob says: running from the battery (no ac power)... for very long). Then again, the deep-cycle batteries cost about the same as the car batteries ....

Hello all,
I have a yaesu FT 1000MP in excellent condition I would call it like new. I keep it covered when not in use too. I have rig, mic, manual, org packing and box. I might even throw in a Heil Pro Headset. This rig is perfect. Its a 96 year rig. Has been to yaesu for updates in 99/00. What I am looking for is the following:
A 756 Pro even up
A 746 Pro even
OR
746 and a 706MKII even
other trade possible but i need to have 6 meters on atleast one rig if going with the latter. I am honest and you can look up edgewater1 on ebay all my feedback is positive. Thanks all. Cash? I want 1600.00 plus shipping.

Message-ID: <Ycoj8.1439$To6.289783@e420r-atl1.usenetserver.com>
Source record: 46151

The OHR Explorer II is a great little 40m cw superhet tranceiver with a hot receiver. Can be setup for 70 khz coverage anywhere in the 40m band (currently setup for the low end). Has a +/- 1 khz RIT - just great for Fox hunting. Has front panel adjustable variable bandwidth filter (~350 hz - 1500 hz) that works great! Outstanding QSK. About 2-3 watts output, depending on power supply voltage. I've added a K8 keyer and its single button control is on the front panel. The K8 has my call programmed into it, but you can upgrade to a K9 with your own call for $8 (see http://members.aol.com/k1el/k9info.html). The rig is in excellent cosmetic and functional condition. You can see a picture at: http://mywebpages.comcast.net/wrmoore47/OHREII.jpg.

Asking $90 shipped in CONUS.

Greetings,

I have for sale an Icom IC2-GAT 2 meter HT. Unit is in good operating condition and fair physical condition, mainly with paint blemishes and nicks. LCD display is clean. Includes original battery, high capacity Icom BP-8 battery, Icom AD-12 external power adapter, wall charger, antenna, Radio Shack speaker/mic, and manual. Operates at 7 watts out with original battery or external adapter.

Asking $90.00 shipped. Will ship upon receipt of US POSTAL MONEY ORDER ONLY! I will e-mail you with UPS tracking # when unit is enroute.

A picture of this package is available at
http://www.scancapecod.net/misc/ic2gat.jpg

I also have a Kantronics KPC-3 TNC that was used with this HT for a portable packet setup. If interested I will throw it in as well for an extra $40. If interested, please e-mail me. Thanks for reading.

Greetings:

I have a Realistic PRO-2004 with HB-232 computer interface for sale.
Asking $200 shipped on receipt of US POSTAL MONEY ORDER ONLY! A
detailed explanation of this radio, which has undergone numerous
modifications and enhancements, can be read at
http://www.scancapecod.net/2004sale.html. Pictures of the radio are
also available at this link.

Please e-mail me if interested. Thanks for reading.

3504. Screwdriver Antennas

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-12 19:56:03 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <Batj8.48507$Yd.2775962@e3500-atl1.usenetserver.com>
Source record: 46159

If you are in the market for a screwdriver mobile antenna, then I invite your attention to the
Carolina Cyclone shown on my website below. The difference in the Carolina Cyclone and
some of the others is in materials, workmanship, and price. Often, increases in signal strength
are achieved by increasing the size of the inductor, wire size, and spacing. This is what I have done with the Carolina Cyclone. Cyclone I, for example, is 2 1/2" dia compared to
only 2" for the DK3 clones and uses #14 wire spaced at 8 turns per inch for a better form
factor. Materials are black Nylon, the same materials used for Nyloc bolts, to handle high
power, and give rugged service for years and years. The result is 800 watts power handling
power (conservative) for Cyclone I and a full 1500 watts SSB for the Cyclone II, which is
a full 3" diameter to give the same "Q" as the famous Texas Bugcatchers. You will find that
you will be most successful with DX and pileups with the Carolina Cyclone series of antennas. AND the prices are well under those of most of the competition. For more details, please visit www.qsl.net/k4kwh .

Thanks for reading.

Has your screwdriver weather cover split and cracked in the hot summer sun?
Has it suffered a direct hit with a rock forcing you to tape it with duct,
or clear, tape? Has it become brittle and will shatter at the touch? Then
please visit www.qsl.net/k4kwh for
a weather cover that will LAST for many years without worry of the cracking
and splitting
of the Butyl covers used by *some* screwdriver makers. The covers on this
webpage are
1/8" wall Lexan, are tough, resilient, and will not suffer from the effects
of weather as the
Butyl does. It comes in several sizes to fit a variety of screwdriver
diameters. Please visit
the website and place an order for your replacement! Remember to measure
carefully so I
may provide the correct size for your screwdriver cover.

No useful reply here, but just a comment. When I was researching a 2m rig to buy, I found that the Icom 2100 was definately one to stay away from. If you can return it without suffering any penalty, like a restocking fee, I'd go with the Yaesu FT-1500.. I just bought one and it seems to beat the Icom hands down.

Most emergency calls around here are short enough that it would take
longer to hook up the patch to the appropriate rig (assuming they even
have compatible connectors) than to simply relay the information to a
911 opertaor manually.

I just listed the following item for Auction on eBay.com
The Controller has all the original cables sealed in plastic bags
as well as manual. Unit was purchased late 1999/2000,
and just never took the time to figure out how to hook it up.
I also bought the Software, and never loaded it..
Lost interest in working this mode, and the time to hook this
thing up to my HF rig. Manual looks like the Yellow Pages..

Happy Bidding..

I have seen the AH-4 mounted on the outside of a motor home on ladders,
in the trunk of a car, and at the bottom of an antenna tower.
In all examples the issue may be with temperatures.
I would check the manual or send Icom an email and
see what they think.

I don't think I would put it in my attic here in Atlanta, Georgia
with temperatures that reach over 120 degrees..

I got to say the 2100H is a GREAT radio, many guys in my area have one
including me and we LOVE it. What's wrong with them in your opinion?
It's a solid radio, easy to program, great audio.

The AH-4 is a direct replacement for the AH-3, The AH-4 technically
does not operate below 7.0 MHz on a 8 foot whip antenna where the AH-3
did. Both interface to the radio exactly the same.

3532. Yaesu FT-101ee problem

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-13 12:04:00 UTC
From: AB Brown <abbrown@nospammail.com>
Message-ID: <a6nf63res1@slb1.atl.mindspring.net>
Source record: 46187

Hello,

I just picked up a used FT-101ee and I have the following problem:

The radio runs fine until I activate the "heater". About a minute later, the final tubes start glowing much brighter than normal, the idling current goes off the scale and the radio blows its fuse. Also there is smoking around the internal bias adjustment pot. What could be my problem?

I'm new to tube equipment, having used solid state for years. If I were to guess, I'd say that one or both tubes are bad.

Any thoughts would be appreciated.

Thanks,
AB

Lots of heat in attic all right. As an example, I floored a portion of my
attic for storage years ago (when I was relatively young). It was summertime
and hot enough up there to rouse my curiosity. I brought up a thermometer to
see what temp I was working in and it was running 130 degrees. This was in
north Texas,
but on an august day in Anywhere, USA I'd expect pretty high temps.

Both tubes are probably bad now for sure....

The symptoms you quoted would indicate that the proper bias is not getting to the control grids of the tubes. You may also have some internal shorts in the tubes.

You can check the bias voltage without the tubes in the rig but be careful. If you are used to working with solid state gear, you will find much more dangerous voltage levels on both the tube base socket and plate caps.

You need to replace the bias control pot and check all the other associated components in the bias supply circuit before you put any tubes back in the rig.

You might consider contacting someone in your area for assistance who is more familiar with tube equipment also.

73 and be careful...

Greetings,

I picked up a piece of test equipment at a recent Hamfest, but I have no idea what it does. So why buy it ? Because it was neat looking of course! Since when do we need a reason to buy test equipment. It is not really ham-related at all. (I think). What follows is the most detailed description I can give. Any help or wild ideas about what exactly it is, was used for, or what has now replaced it, would be welcome.

The device is a " Potentiometer , Model 1327-IM, Ser.# 148" and was manufactured by "The Winslow Company" in Union, NJ, probably in the 60's. A piece of paper referencing routine service checks that came with it shows it was in possession of the Weather Bureau Office in OH from at least '69 to '76. The following is a basic description:

Measures approx. 8 x 10 x 16. Encased in a beautiful latched wooden case. A bottom compartment in the wooden case is unscrewed to reveal the storage for the "number 6 dry cell" battery. The black metal face of the device includes a Galvanometer with needle meter that must be zeroed prior to use. Also a potentiometer with meter where " current is adjusted." The apparent use was to make some sort of portable temperature measurements as it includes instructions that say to " connect the thermocouple leads to the terminals maked T.C. for making temperatuer measurements." That's about it.

I've scoured the internet looking for this company and a NJ address and none is found. I suspect it was used in some sort of calibration-type process, but I really don't know. I've also looked around the 'net a bit for galvanometer and/or potentiometer makers but nothing really jumps at me as being related. If you have to ask, Why Bother? You've never collected any old test equipment. < Hi, Hi.> If you have any ideas please feel free to share them. Based on your responses I may cross-post this to a Meteorology ng. Hope you can help.

Don't know what the instrument is but do know the following.

Thermocouples generate a voltage from temperature difference.
A good way to measure that voltage is to compare it to a known voltage
by connecting a meter between the unknown and the known.
You adjust the "known" so that there is no difference between the two.

I suspect that is what your instrument does.

3557. FS Icom R71A and active antenna

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-14 01:49:29 UTC
From: Jon Van Allen <jonvanallen@msn.com>
Message-ID: <3C9001A9.A86C45BA@msn.com>
Source record: 46062
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

FS Icom R71A (has PBT) and Dymek DA100E active antenna.

Included is a brand new non-volatile PIEXX PROM board which keeps setup information in an onboard non-volatile PROM using a battery backed RAM for saving the memory channel data. This is a major improvement over the original Icom PROM because without this board, you have to send the radio to Icom when the backup battery dies (which costs over $100)

Filters: FL-30 cw filter, FL-32 narrow ssb, FL-44A ssb and FL-70 wide ssb.

This is a quad conversion receiver, sensitivity and selectivity are as good as it gets. The preamp and attenuator work great.

The only problem is the keypad contacts needs to be cleaned. Sometimes you have to push the key twice or a tad harder than mornal to make contact.

Asking $300 for the receiver, and active antenna. Recent ebay prices are anywhere between $275 for non PBT up to $400. I think this is a fair price for a PBT model and especially considering the Dymek active antenna is worth $80 to $100.

I have the manual and original box.

Email me if interested.

73, Jon
KF7YN

On the other hand, I know of six different ATAS users (including myself) who have used this antenna for over 2 years with nothing but great results and good signal reports. To be fair though, the ATAS does rely on a proper installation and excellent grounding in order to work properly.

3562. FS: Real Nice Panel Meters, CHEEP!

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-14 04:27:50 UTC
From: rlucch2098@aol.com
Message-ID: <20020313232750.24396.00000977@mb-de.aol.com>
Source record: 46067

Hi Guys;
I have these panel meters that I had bought once for my pal W7ASW, here on long island, A long time Homebrewer. Unfortunetly he shortly therafter became a SK. So I have these 5 sets(10 total) Made in England Panel meters.
They are high quality and have been tested at 5vdc for full scale as the meter scale says. They were made to read temperature so you'll need to shunt accordingly.
The internal shunt is a 5K ohm resistor with plently of room to replace it, easily.
The meter measures 4"w x 3-1/2"h, with 3/8" thick from panel face. looks like it needs a 2.5" hole in the panel. These are used but just need a bit-o-cleaning & they'll be really nice.
The Scale can be easily removed with a few screws from the front, scanned into your 'puter & remarked/printed out & then pasted over the original aluminum base plate of the scale.
Here are some pics>>
http://www.baltimorepress.com/~wa2rqy/panelmeter1.jpg
http://www.baltimorepress.com/~wa2rqy/panelmeter2.jpg
http://www.baltimorepress.com/~wa2rqy/panelmeter3.jpg
Price is $15 per set shipped.

Hi All,

Does anyone out there have a spare Kenwood Amplifier cable that they
want to sell ??? The part # is X42-111011. This is the standard Kenwood cable
that connects your rig's keying & alc circuits to most amplifiers. It has a 7
pin din plug at 1 end and 2 RCA plugs on the other. If you have a spare one to
sell, please E-mail me at rong@computer.net

Thanks,

RON

The only continent I have yet to work on my ATAS-100 is Antarctica. I also use it to check into the daily 40m traffic net. Obviously, they will not stand up to a tri-band yagi on a tower, but what mobile antenna will? Every antenna installation is a compromise. The ATAS-100 is no exception. When properly installed, they work very well.

GE Portables
GE MPA VHF 146-162 full system keypad. Radio is as new and is almost perfect. The only flaw is the grip tape under the PTT button is peeling at the edges. Otherwise perfect. The next feature is, The radio is Key pad programmable. 16 channel scan and front face programmable. Has a like new battery and a good rapid charger. Also a belt clip. $500.00
GE MPA VHF Select 157 - 174 split. Nice radio 9 condition with battery and standard charger. I have it programmed down to 154 MHz with no trouble but will go no lower. $200.00
GE MPD UHF select model 440-460. 48 channel alpha-Numeric display. programmed on the 440 ham band and works on the local repeaters and GMRS. With Battery and standard charger. Nice 8 - 8.5 radio. $100.00 Also have 1 in about a
7 condition $90.00
GE MPD Scan UHF 440- 460. 48 channel Alpha-Numeric display. Also programmed on the hamband for testing. Works on the local repeaters and GMRS. with battery and standard charger. $125.00
GE MPD scan VHF 150.8 174. 48 channel Alpha-Numeric display. These look good and come with a battery and standard charger. 135.00 each. I have several of these.
GE PCS UHF 8 channel. I have this radio on the uhf ham band for testing and it works the local repeaters. with battery and charger. $95.00
GE MPS VHF Like new 10 channel. With new battery, new antenna, and a standard charger. $65.00
GE MPS VHF 12 channel. Set of 4 that talk to each other with all new batteries and antennas. All in a rack charger. $225.00
GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1 good battery. With 1 dual slot charger. $225.00 all 3 radios.

GE Mobiles
GE Phoenix SX VHF 16 channel with dual priority scan. Grey case with mic, speaker, and power cord. Tested working. $75.00 each. I have 2 complete.
GE Phoenix SX VHF 128 channel scan. No accessories. Has all 8 proms. $100.00
GE MVS UHF 16 channel scan. With Mic, Bracket, and power cord. $125.00
GE Mastr II UHF 75 watt mobile. Painted handle. Drawer only $75.00
GE Mastr exec II VHF 75 watt mobile complete with accessories. $60.00 each
GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr II or Delta. $20.00 each
GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that I have seen marked
Ericsson) $65.00
GE Delta S Low band 42-50 100 watt mobile. Complete with cable, mic, speaker, and s500 head. Will make a great 6 meter ham mobile or base. $125.00. I use one for 6 meter and I have made contacts in Texas and Canada.

GE Ranger VHF 150.-162 100 watt mobile. Complete with cable, Mic, speaker, and s550 control head. This is a great public safety mobile or will tune to the 2 meter ham band. $175.00
GE S990 head. Looks new but I have not had time to test this yet. $75.00
GE Mobile Vehicle Adapter For MPA, MTL, MPD, and TPX. This unit charges your battery and turns your portable into a mobile radio. (Convert a Com) With mic, speaker,
and power cable. $100.00

GE Accessories

Mastr II control cable. $8.00 each
Mastr II head for mobile repeater operation. $5.00
Mastr II Mic. $5.00
Mastr II 8 channel tone boards. $5.00
Mobile Repeater cable for Mastr II. $10.00
Mobile Repeater cable for Delta or Ranger. $30.00. I have seen programming cables made from these.
GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5. $4.00 each. I have a large amount of 203.5,186.2, 179.9, 173.8, and 162.2. If you buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50 each.
GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each. I have 2 sets of EC/5C UHF icoms left and I bought 7 sets of 2C UHF Icoms = $30.00 per set. I have 5 sets of these left now.
GE Delta cables. These are the downloading type used with the S820 heads. $40.00 each
Delta mounting plates. $10.00 each
Ranger mounting plate. $15.00
GE S-550 / 500 and others mounting brackets. $5.00 each
GE MPA, MPD, MTL public safety mic. $35.00 each
GE MPA, MPD, MTL standard Speaker mic. $25.00
GE PCS Universal Rapid charger. $35.00 each
GE MPA standard chargers. $20.00 each
GE MPA Rapid chargers. $30.00 each
GE MPI desk charger with wall transformer. $10.00
GE MPI Rack charger, 8 position. 25.00
GE MPI Mobile battery charger, Rare. $20.00
GE Battery discharger analyzer. For MPA, MPD batteries. Attaches to a rapid rack charger with a DB 15 cable and uses a MPD body to attach a battery to. Has LED readout in display area of MPD body to tell discharge rate. Another rare GE goodie. $45.00
GE shoulder strap like new, attaches where belt clip is. $15.00
GE Belt clips. $10.00 each
GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card and power supply / speaker. $300.00
GE Duplexer part number 19C-307166-P1. Model DB-4075. This is the standard MastrII
Duplexer found in the MastrII cabinets. With the harness. $125.00

Other Radios and Accessories
Marconi UHF portable. 16 channel scan with NOS battery. Made by Midland.

$75.00
Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$75.00
Motorola GP300 VHF 2 channel. on ham band. Has battery OK condition and charger
I had to re-list due to a deadbeat buyer. $150.00
Motorola Mitrek VHF high 110 watt drawer only. $50.00
Motorola Adapter for MX radios for the 1801 suitcase programmer. A and B prom. $175.00
Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of crystals for each radio. Also have a working battery and charger for each. I have 4 of these. $50.00 all
Motorola UHF Convert-a-com Amp. 5 in 40 watts out. $45.00
EF Johnson 242-8600, 800 MHz LTR I have 4 of these. $25.00 each
EF Johnson Challenger UHF 80 watt trunk mount, 99 channel Alpha-Numeric head.$225.00
Kenwood TK 940, 800 MHz dash mount radio. $100.00
Uniden SMS 825 ts, 800 MHz Dash mount radio. $75.00
MRC 100 Repeater controller in rack mount. $100.00
Voter from IMTS phone system. 2 rec and 2 tx cards. $40.00
Maxon Rapid Rack charger for 0510/0520 radios. Think they will work with the sp2000 as well.$35.00
Antenna Specialists on glass 440 antenna. New old stock. $22.00
Antenna Specialists on glass 220 antenna. New old stock. $22.00

Consignment section
This area is for a few friends who like those other radios you know "Motorola" They are good people and I will pass along any trades you may wish to make.
Motorola X9000 VHF 50 watt, Alpha-Numeric head, Siren complete. $425.00
Motorola Maratrac VHF 100 watt 16 channel head, Never mounted in a vehicle.$375.00
Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each
Motorola HT1000 Intrinsically safe, Re-cased looks new. 16 channel scan with charger. $425.00
Motorola P200 UHF high power. 6 channel. $150.00
Motorola MT1000 UHF 16 channel scan. $250.00

Want List not FS
Extra parts for suitcase programmers. Data modules, Printers, cables, proms, anything you have extra. MPA or MPD portables what do you have and what do you want for them?
Johnson scorpion program cable. PSX200 UHF mobiles.

Terms
All prices are plus shipping from 40201. All items are used unless noted and only have a no DOA warranty if I say it works. If I say not tested your on your own. If I think it may be bad I will not list it. I take cash, Postal Money Orders, Paypal, and checks but I hold them for up to two weeks to clear before I ship. If you have a question E-mail me.
Dean

As far as I have heard, that rig cannot be modified for 11m. Radio Shack looked into this and made it pretty much impossible.

Why not just make one yourself (and save a lot of money)? The parts can be had at any Radio Shack for about $5.00, and it only takes a few minutes to put it together. I made one up for my TS-790 satellite rig that controls three different amps - one for each band. If you only need keying for one amp and ALC, it is only a three wire job.

3586. Help With Setup Of Tiny-2 For APRS

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-15 05:38:10 UTC
From: Doug Gavilanes <gavilan1@earthlink.net>
Message-ID: <3C9188A0.891B9664@earthlink.net>
Source record: 46091
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc,rec.radio.amateur.equipment

I am having a problem with setting up a Tiny-2 TNC for mobile APRS. I had it all figured out and had the TNC up and running fine, but a couple of days ago, the memory defaulted back to a clean slate in the EEPROM (MYCall was NOCALL, etc.).

Findu.com shows my data string as:

Report received 2 days 4 hours 41 minutes 33 seconds ago

Raw packet:
N6XQY-12>GPSLJ,RELAY*,WIDE3-2:$GPGGA,005241.31,3351.5928,N,11817.7613,W,1,08,1.0,00028,M,,,,*3F

I tried to use my limited notes since the TNC crash, but unfortunately I'm still down. The data below is how the TNC is set up right now. Can someone here please have a look at my settings and point out where I am set incorrectly? Thanks in advance.

Could it be that KB9YTV sent you a MO in good faith but someone else stole and cashed it? That has happened. I don't know the person and every region and hobby has its crooks but in my personal experience Hams and folks from the North Woods (Minnisota, Wisconsin, etc) are honest almost to a fault. Hope it all works out for you.

3592. IC-756 and wire-in INRAD Filters

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-15 16:22:59 UTC
From: Anthony Bowyer <adb1x1@yahoo.com>
Message-ID: <70f522742e4f9179b2f6507a3d1b9880.77949@mygate.mailgate.org>
Source record: 45998

I'm considering an INRAD CW filter for an IC-756 (not pro) and was wondering if anyone had any experience with the 756 wire in filters. I had an FT-920 with INRAD filters and filter board that worked very well, but I've not used the ICOM versions and wasn't sure if the extra cable length used to wire the filters in, causes any problems (blow-by, etc).

Thank you!
Anthony, NT4X

Source record: 46001

That's also happened to me. A check sent to me went astray and was fraudulently cashed. Interestingly the bank wasn't interested in pursuing the matter; said the amount wasn't big enough. I guess that's why bank fees are so high.

Pete/N9PT

I have a used Vertex VHF VX-210 HT with a new FNB-V57 NiCd battery for sale.
Specs below - Sell for $300 or consider trade for laptop
Frequency Range:
VHF: 148-174 MHz

16 Channel Capacity

5 Watt Power Output (selectable to 1 Watt)

MIL-STD 810 C/D/E

12.5/25 kHz Bandwidth Programmable by Channel

PLL steps:
VHF: 2.5/6.25 kHz

CTCSS/DCS Encode + Decode
Positive Lock Channel Selector
ARTS (Auto Range Transpond System)
BCLO, BTLO, TOT
Tx/Rx Battery Saver Circuit
PC Programmable
Radio-to-Radio Cloning
Voice Inversion Encryption Available
Super Rugged Construction
DTMF 16 keypad (for VX-Trunk II Operation)
Intrinsically Safe Versions Available

No Problem.. just keep the coax leads short.. INRAD makes good filters,
some are even better than the ICOMs. Check the shape factor.

I'd replace the burned up bias parts, check out the parasitic supressors for cracked or open resistors, replace the tubes with a matched pair, check the bias, check the antenna SWR, perform the Neutralization procedure, and you should be good to go. I don't think Key down at full power for a minute is a good thing to do.

3608. ADMS 1E Programming Software Help

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-16 03:11:05 UTC
From: Galaxy Master <galaxy_master@hotmail.nospam>
Message-ID: <EHyk8.33929$X2.339543@nnrp1.uunet.ca>
Source record: 46013

Greetings All....

Purchased the ADMS 1E (ver 2) software and cable to program my Yaesu FT-50R handheld
Finally got around to installing the software tonight -loaded OK
Tried to make a template for the radio as specified , but the radio will not talk to the computer - I keep getting "CERR" on the radio display when I try to send the data
I followed the instructions to the letter......
The computer side connector is a DB9 which I have plugged into the mouse serial port (the only small serial port I have)

Tried getting Hyperterm to "see" the cable as suggested in the instructions -but it doesn't for some reason........
(Have it set to COM 1)
Anyone out there have any experience with this unit ????

ANY suggestions......??

Tnx and 73

I couldn't find a DOS tutor that worked properly under XP. I finally
shelled out for NuMorse, which works very well. Comes out to around
$1.00 per hour to pass the 5 WPM exam from a cold start.

I especially liked the mode where it waits for you and/or identifies a
mistake. You can increase your speed and accuracy very quickly using
that mode. As soon as your max response time (which is reported) is
routinely below 2 secs., you know you should pass.

If it saves you a few hours of prep, that makes it even cheaper.

Ending tomorrow, this is a good, working complete final amplifier assembly from a Kenwood TS-850S transceiver)HF), 100 watts+ output, includes cast aluminum housing, PA board, a couple of other boards and cabling/connectors.

This can be dropped into your blown-up 850 or fashioned into a stand-alone linear amplifier to follow your QRP rig for home use. Purchase price of these items new from Kenwood is hundreds of dollars.

Check my feedback (230+, all positive) and bid with confidence!

Since the fuse blowing current only happens on transmit, and it's related to output power, I'd bet one of your RF output transistors is shorted.

I have mine hooked to a standard COM1 port. I occasionally get that error, but it usually works fine if I try again. You need to get Windows to recognize the port (in Hyperterm for example, as you suggested) before the ADMS program has a prayer of seeing it. I have never heard of using a mouse port as a COM port, so that may be your problem.

The same for my ATAS-100. I am amazed how the combination of FT-100D and ATAS-100 is working.

Mine works great! Autotunes (I really think it is *semi*autotune, but that's only if you've used a true *auto*tuner) all its designed bands, including WARC (Yaesu sorta waffles on whether the antenna will autotune the WARC bands).

Just don't use it on 144/440 unless you live/work/drive near your favorite repeater. Oh, it'll work, but very poorly. Get yourself a good VHF/UHF dual-band (gain) antenna for those two bands and leave the ATAS-100 for HF - 6m.

Are you disconnecting your mouse in order to hook this cable up??? If so,
that will be a problem. If you have a larger, DB25 serial port, just get a
9 to 25 adaptor and use that port. If you have only one serial port, can
you switch to a ps2 style mouse?

Message-ID: <20020316132253.21394.00001976@mb-cv.aol.com>
Source record: 46032

I was recently told that there were some Eimac 3-500Z tubes that had bad plate welds and that this would cause the plate structure to start leaning over after a period of use. Does anyone here know how to identify which Eimac 3-500Z's these were? Also, does anyone have expreience with RF Parts brand 3-500Z's? I have always been advised that Chinese tubes should be avoided but on the other hand, I hear pretty good things about these. I have an old SB-220 and I want to get a set of spares for it. I just don't want to get stuck. (Also, if replying directly please reply to k1rodxyz@arrl.net and remove the "xyz")

Thanks es 73'

3629. Re: Eimac 3-500Z tubes

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-16 20:16:01 UTC
From: "M.E." <bogus@nospam.com>
Message-ID: <3c93a541$1_1@newsa.ev1.net>
Source record: 46034

EIMAC has not made any 3-500Z tubes in the last 5 years, they no longer make any glass envelope tubes of any kind.
Any 3-500Z tubes marked "EIMAC" are old stock, used, or counterfeit.

Triton services of Easton,Pa. bought all of EIMAC's glass tube tooling, and the rights to manufacture any glass tubes, formerly made by EIMAC.
3-500Z tubes can be bought from them, but are intended for commercial/industrial use, and have a new price of $250 each.
Virtually all glass power amp tubes that are not made by Triton, are made in China.
Amperex of France/Holland still makes 3-500Z tubes, but are very high priced, but are using "Graphite" plates, and are of good quality.

On you problem, ANY glass tube like the 3-500Z can have the problem you describe, if the plate is run too hot for too long. A excessively high idle current is a possible cause. Excessive over-drive(most common cause).

It has to. The entire body of the rig IS heat-sink, and barely enough surface area to dissapate all the heat produced inside the radio. This radio runs hot, because it must, there is no other way to do it.

Andy,
The AH-3 and AH-4 antenna tuners can be used with any radio. The AH-4 will tune ant time it detects a high SWR. Look at the mods for the Icom 706 and somewhere it will explain the plug on the back of the rig and the way to make a tuner simulator plug.

An interface would be a simple power switch to the tuner.

Be sure any rig you connect has less than 10 Watts output when the tuner is tuning!

Sorry I do not have time to get you the info, but I am going out of town tomorrow, be back next weekend!

Source record: 46046

This problem has been repaired! I replaced the TWO 10 K resistors leading
to the bias pot and the transmitter is working ok now. The tubes tested ok
also, luckily and haven't seemed to suffer any damage. I still can't figure
out why the bias resistors overheated like that.

Thanks for the tips and information.

3642. AGGGGGGGGGGGGHHHHHHHHHHHH!!!!!!!!!!!!!!!!

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-17 02:18:53 UTC
From: Galaxy Master <galaxy_master@hotmail.nospam>
Message-ID: <F0Tk8.34886$X2.344487@nnrp1.uunet.ca>
Source record: 46047

After trying EVERYTHING under the sun to get this damn thing to work ,
on a whim I tried the cable that I have for my FT2600 (also never used it)

Went into hyperterm to see if it would "see" it -and lo and behold it DID
!!!

I took the cover off the DB9 connector on the offending cable and discovered
that inside there is a tiny circuit board with SM components on it -what
function they serve is unknown to me........

So it would seem that I have had a defective cable all the time !!!!!!!!!!
Probably one of those stupid SM components..........

Unfortunately I am SOL because it turns out that I purchased those back in
2000
and the stupid things only have (excuse me) HAD a 30 day warranty..........
So much for quality control in America.........

So now I'm thinking.........I have a good cable (the one for the 2600) but it
has a telephone style plug on the end (for the 2600 jack of course) -the
FT50 requires a 4 conductor phone type plug - what do you think are the
chances are of me building an interface for the 2.........???

Probably better than the chances of me convincing Yaesu to cough up a new
cable after 2 years..........HA !!

I think I saw a wiring diagram somewhere for the cloning cables........time
to start searching.......unless someone has any good ideas..........

Thanks for all your help and advice......

Jeremy

Provided you find the right 4 conductor phono plug, making a converter should be possible. I have the ft-50 cable, and easily made a converter over to the rj-11 style jack.
Good Luck..

Date: 2002-03-17 06:30:26 UTC
From: kc6wog@hollywood2u.com
Message-ID: <3a4cce46.0203162230.54389338@posting.google.com>
Source record: 45958

The TH-27A I bought new in 1992 has always worked great, but after being in storage for a few years it is now inoperable. The rig has no receive audio (not even unsquelched, and no system "beeps" either), does not receive (no signal on meter) and does not transmit. In every other way, it appears to be normal! VFO can be set, memories stored, features turned on/off, etc.

I did all the obvious things (CPU and VFO reset) and even replaced the lithium backup cell, but with no success. Upon researching the rig on the net, I found multiple instances of this failure mode, always after an extended period of non-use, but no solutions. I'm guessing this MUST be a rather common problem.

Has anyone experienced this fault, and were you able to fix it? I'd be greatly appreciative of any information or suggestions. I hate to send the rig in for service, as the expense would probably exceed the radios value. I just hate to buy another 2M HT, particularly since I (obviously) seldom use the thing.

Cheers es 73,
-Larry KC6WOG

Hi all,

I have a Bird 67 dummy load (30 -500MHz, 500 W). No meter available. Can someone clear me up on how this thing works? It has three odd plugs on its pig shaped nose marked with power ranges. I like to use its power measuring features. It measures 51 ohms so I guess the lower f-border has something to do with the metercircuit.
Thanks in advance,
Harke PA0HRK

Alternately, RT Software, which makes some versions of ADMS software
for Yaesu and others, will sell you cable only, software only or the
package, as you need.

http://www.cloningsoftware.com/

Also, for following John's suggestion, the special 4 conductor plug is
out there. A previous thread on this group did go through options. If
yours is set up with a three conductor plug and a short adaptor cable
to the 4 conductor, this is even easier.

Happy trails,

Looking for comments from anyone who has replaced the 811A tubes with 572B tubes in the Ameritron 811H amplifieer. Any problems? what was the output??? any comments??? I was told the 572B tubes are direct replacements for the 811A tubes but will run much cooler since the 572B have a much higher plate dissipation.

Hell, you can get a near mint 2006 for less than $285. A near mint
2004 goes for less than $200 shipped.

3660. Attention Ten-Tec Omni V users.

Hello all.

Please find below some correspondence regarding the Ten-Tec Omni V model 562
radio.
I'd be grateful for any further input you may have, and especially grateful
for a copy or sight of the QST article as mentioned.

I have written to Ten-Tec, but no response as yet.. I suppose they're busy
with the Orion comments after the Charlottesville hamfest / rally..

The audio hiss really does detract from a good radio, especially when I compare side by side with a Yaesu FT-102. The Omni is better at weak signal recovery and the slight IM displayed by the 102 on 40m under certain conditions after dark is not evident on the Omni at all.

2 modifications I've made are as follows:

Double the value of C40 on the RX IF/AF board to increase the slow AGC time constant.
Remove the sidetone board and cut the ground traces connecting the mounting brackets..the multiple grounding of this board was causing TX audio to leak through the RX audio chain and was very annoying, especially with 'phones on!
After I did this, I discovered that there was a production modification to the mounting arrangements for the board involving plastic spacers.

Does anyone here know of any other production mods that were done?

I know about the QRP mod and Carl N4PY's software enhancements.

I find that the TX audio speech processor is not effective.. the FT-102's is far superior.. any hacks for some improvement?

I've found 2 manual interfaces circulating on the web that can be used to manually control the AH-4 auto tuner. There is a simple version that is nothing more than a switch, LED, and resistor, and another that is more elaborate using a micorprocessor controller.

The designer of the micro controlled unit criticizes the other manual interface saying the 'relays may switch under load and you can not tell if the tuner has tuned'.

I'd go with the micro controller tuner in a hearbeat but have yet been able to get the details of the circuit, specifically the micro code, from the designer.

Has anyone used the simple manual interface and if so have you encountered any 'glitches'?

TIA

Andy N3LCW

I recently purchased a nice, used FT-101EE. The radio appears to be working except the AM receive is distorted. I recently read that there is a way to add a separate 6 Khz AM IF filter that will cure the problem but upon checking the prices of the Fox-Tango filters, I'd like to find an alternative (I paid less for the radio than the price they are asking).

Appreciate any thoughts here and thanks, in advance.

AB

Did you replace it with a NON-POLARIZED motor run capacitor?
That is an AC cap, and 5-mfd will not make a difference. Lot at the
tolerance ratings.

even THAT would be a bit excessive when you consider the faster
speed and features of the flagship of the pro-200X line ...and it's
usual price is only $210.00 and $190.00 on sale here ....

http://www.hammerheadtech.com/Merchant2/merchant.mv?Screen=PROD&Store_Code=HT&Product_Code
=Realistic+Pro-2006

buying thru established merchants (with a return privilege) is
highly desirable ... not to mention these 2006s have ALL the mods
(even slicer) done in a professional shop.
I have several pro-2005s and 2006s and most of them do poorly
with programs like MDTMonitor , mobitex and banapia ..but these
pro modified units provide slicer outputs which allow these programs
to work perfectly. A plus worth thinking about too.

cheers

Yes, it should be non-polarized. I had one of those rotators, and I can't find the manual
for you. Sorry. But you can order one from this gentleman:
http://www.sarrio.com/sarrio/rsman1.html
if no one can help you. BTW, I think that unit came in a few different revisions over the years--
mine dated from my highschool days in the '60s! Good luck.

If it worries you, you could always mount an extra muffin fan behind it.
That's what I did.
Hehe. The fan is almost as big as the radio. <<g>>

3687. Heathkit Instrument Collection - Five Pieces - Ebay

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-18 00:25:57 UTC
From: Dan Long <w4tq@mindspring.com>
Message-ID: <a73cpl$429$1@slb4.atl.mindspring.net>
Source record: 45993

Heathkit Instrument Collection - Five Pieces - Ebay

This auction is for four Heathkit test instruments plus the original Heathkit manuals, plus a regulated power supply. The instruments are designed to be stackable, and they are shown stacked on top of the power supply. A power cable runs from each instrument to the power supply.
The instruments include:
Model IT-5283 Signal Tracer
Model IG-5280 RF Oscillator
Model IG-5282 Audio Generator
Model IB-5281 RLC Bridge

Pictures: Those interested, please send a request to my email address and I will send a set of pictures showing each instrument and power supply.
w4tq@mindspring.com

Power Supply: One of the problems with these Heathkit Test Instruments is that they require +/- nine volt batteries. The power supply included (shown at the bottom in the stack) provides the +/- nine volts (no batteries required). Both the positive and negative sides are adjustable. This power supply has a nice transformer to provide isolation. One knob adjusts the positive, one adjusts the negative, and the small switch switches the meter from the positive to the negative.

Cosmetically these are in very good to excellent condition. Functionally, they all worked at one time. I used the RLC bridge recently to check some capacitors, and it worked perfectly and was in good calibration. I used the RF Oscillator a few months ago, and it worked perfectly and was in good calibration. I haven't used the Signal Tracer since it was built. I used the Audio Generator last year, and there was a problem with it, although I don't remember the details. The power supply works perfectly. I am selling the items as-is, with the Heathkit Manuals included.

Quite obviously he is not an "amateur" in our sense of the word....

He is (I believe) talking about a "Broadcast" Radio station (FM Radio)

In which case , he is also posting in the wrong place......

If he is really talking about a Ham Radio station, then he REALLY doesn't understand the regs.....!!

3689. B&W Low Pass Filter, 1000W - Ebay

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-18 00:36:53 UTC
From: Dan Long <w4tq@mindspring.com>
Message-ID: <a73d5e$84k$1@slb7.atl.mindspring.net>
Source record: 45994

B&W Low Pass Filter, 1000W - Ebay

This filter is the model 425. It is rated at 1000 watts. This Low Pass Filter covers amateur radio bands 160 through 10 meters, as well as the citizens band frequencies. It is rated for 52 Ohms impedance. It works perfectly.

For those who aren't aware, the purpose of the filter is to prevent the unintended transmission of signals (harmonics, for example) above 30 megahertz (10 meters). The filter is placed between the antenna and the output of the transmitter (or transceiver). Aside from helping to comply with FCC regulations for signal quality, it will prevent certain types of TV interference.

Velvet Vernier Dial - for 1/4 Inch Shaft - Ebay

This Velvet drive accepts a 1/4 inch shaft. It is 4 inches in diameter. I used it in an antenna tuner for a few years, but I disassembled the tuner after removing my longwire antenna. Works Great!

For auction on Ebay, click on:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1338897273&ssPageName=ADME:B:LC:US:1

I will be glad to provide additional information. Contact me at w4tq@mindspring.com

3691. Sony Air-8 Receiver: AM, FM, VHF, AIR - Ebay

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-18 00:47:24 UTC
From: Dan Long <w4tq@mindspring.com>
Message-ID: <a73dp4jvm1@nntp9.atl.mindspring.net>
Source record: 45996

Sony Air-8 Receiver: AM, FM, VHF, AIR - Ebay

The Sony Air-8 is a very unusual radio in that it covers the AM-FM broadcast bands as well as the air traffic control frequencies (108-136 MHZ), and the VHF frequencies (144-174 MHZ) which includes the Two-Meter Ham band. Features include frequency scanning, and programmed channel scanning. It is an excellent design.

This particular radio is in very good condition, and it works perfectly.

For auction on Ebay, click on:

>PRO-2004's have been going on Ebay for $150-175

That's correct. I just checked my reference software which has about 10 2004s sold in ebay. Average price is around $150. For a 2005/2006 the average price is around 225

3694. Need: info on Icom IC-27a operating

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-18 01:14:55 UTC
From: Ray <offsetprintingATSIGNHEREcharter.net>
Message-ID: <u9aft87rg291dc@corp.supernews.com>
Source record: 45899

I have an IC-27H but no manual. It appears the tuning step for this rig is
15 kHz. Can that be changed to 20 kHz? You can set it to any frequency
you want by pressing up 1 MHz once and then dialing back down into the MHz
segment you were in a couple of times to finally hit on the right frequency.
Am I missing something?
Thanks for any help.
Ray

3696. FA: McKay Dymek AM7 TUNER - AM / Long Wave Tuner

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-18 01:41:28 UTC
From: Daniel Simpson <dzan@qwest.net>
Message-ID: <1703200219412813 74%dzan@qwest.net>
Source record: 45901

FA: McKay Dymek AM7 TUNER - AM / Long Wave Tuner.

A AM7 tuner is basically a AM5 with the addition of the Long Wave Band. Used in Europe. That you can receive along the east and west coast of the US. (See Information Below)

Long Wave Information:
"155 to 281 kHz: This is another AM broadcasting band in Europe and parts of Asia. In Europe, there are numerous high powered (1,000,000 watts or more) stations here. These stations are capable of covering an entire European nation like France or Germany with reliable signals around the clock. Although ionospheric propagation is not good at these frequencies, the high powers used means that many of these broadcasters can be heard along the Atlantic seaboard during the fall and winter. Best reception is usually from local sunset to about 0600 UTC. A few long Wave stations in Asiatic Russia can be heard on the Pacific Coast beginning an hour or so before local sunrise."

A Detroit Michigan user said:
"I have an AM-7 and a DA-7. They make a nice pair together. Unfortunately, there's not too much long Wave possible except on a few winter nights when I can pick up some of the powerhouses from Europe on the AM-7. I have heard Morocco, France, and BBC on longwave here in Detroit. In fact, this winter, I got them pretty regularly"

SPECIFICATIONS:
* Two Band High Fidelity Solid State Tuner
* Frequency Range: 540-1605 kHz. Standard AM broadcast band,150-300 kHz Long Wave
* Sensitivity: 6.0 ,uV for 10 dB signal to noise ratio on Long Wave Band. 3.0 uV for 10 dB signal to noise ratio on Standard AM broadcast band.
* AGC Characteristic: Less than 6 dB output variation for an input level change of 10,uV to 10 mV.
* Bandwidth: -3 dB RF Narrow - 6 kHz; Wide - 15 kHz
* I.F. Rejection: 45 dB
* Audio Frequency Response: -3 dB @ 15 Hz, 7500 Hz
* Audio Whistle Filter: 9 kHz
* Distortion: 1 kHz @ 30% modulation: 0.5% 1 kHz @ 50% modulation - 1.0%, 1 kHz @ 80% modulation - 1.5% (1 mv @ 1 MHz input, wide & distant mode).
* Audio Output: Standard: 1V RMS- 5K output.
* Shipping weight: 12 lbs. (5.5 Kg.)
* Dimensions: 17-1/2" x 10" x 3-1/2" (43cm x 25cm x 9cm)

Features

The McKay Dymek AM 7 TUNER is an all solid state high fidelity AM/Long Wave tuner combining extremely low distortion with excellent sensitivity, selectivity, and a wide audio range. The AM 7 is compatible with professional studio equipment as well as high fidelity "home" sound systems. The low profile black and teak cabinetry makes the AM 7 an attractive addition to any system or decor.

Broadcasters all over the country report excellent results using Dymek Equipment as low cost monitors. As one station executive wrote, after using the Dymek as the standard, "our signal was as close to 'FM on the AM band' as we could get".

reception from local or distant stations is assured by a choice of narrow or wide bandwidth selections at the front panel. To prevent an overload of the "frontend" that may be caused by strong local stations, an attenuator in the antenna circuit has been included. An illuminated, easy-to-read tuning meter aids in ease of tuning and is standard equipment on all Dymek tuners.

Remarkable selectivity is achieved with two eleven element ceramic filters. A whistle filter eliminates most bothersome noise common to AM listening. Distortion is low and sensitivity helps pull in those distant stations; lets you take advantage of AM's natural long range capabilities - hear stations which were previously unlistenable. Wide and narrow bandwidth selectors assure optimum local and distant reception. Illuminated tuning meter.

The Dymek outreach for perfection in AM reception has produced the Am 7. Unlike conventional AM tuners, the AM 7 allows full and accurate reproduction of transmitted program material. For the first time, AM reception is not limited by the receiving equipment The complete transmitted fidelity may now be fully enjoyed and appreciated.

McKay Dymek is the leading producer of AM high fidelity receiving equipment. Authoritative hi fi magazines agree that the quality of AM reception provided by Dymek equipment is truly excellent. This fact is further established by the acceptance of our products by scores of AM broadcasting stations throughout the United States. Many stations use more than one Dymek tuner to monitor and insure their transmitted quality.

For many years very high quality AM transmitters have been operating, but due to the mediocre performance of available AM receiving equipment, most high fidelity experts believed AM reception to be of inherently poor quality.

It is truly a difficult challenge to design and manufacture a tuner capable of high quality AM reception. McKay Dymek engineers accepted this challenge and, after expending great effort, have succeeded in the design of the AM 7.

The McKay Dymek AM 7 tuner is a precision, solid state AM instrument of the highest quality.

Innovations have been engineered to provide:

Very low distortion even at high modulation levels using a unique hot carrier biased diode detector.

Extremely wide frequency response through the use of expensive ceramic filters.

High sensitivity for reception of weak, distant stations.

Once you have listened to AM radio on the AM 7, surely you will agree with our many satisfied customers: the AM 7 is a truly superior addition to any high fidelity system.

RIF SECTION Dual antenna connectors are provided on the rear panel. An RCA type connector is provided for coaxial cable antenna systems. There is also a set of terminals for direct connection to a longwire antenna and external grounding.

A Dymek AM 7 tuner represents the very best in AM/Long Wave listening. Try it!

Note:This unit needs an external antenna to work I used a terk AM antenna with this unit and it worked well. I am also putting this antenna up for sale. Check for it on ebay. and will need a Long Wave Antenna to receive Long Wave. Like a Mckay Dymek DA7 Antenna or a QUANTUM QX PRO LOOP.

This unit has some minor scratches on the top also a scratch on dial under czech USSR (could be fixed with black paint or marker from the inside) and missing ground plug (see pictures). Otherwise it is in Great Shape!

I accept Paypal, Billpoint & Money Orders. $12.00 for shipping-Continental US only. Insurance optional at buyers expense. Winner to pay within 7 Days of auction close. Email me with questions.

Thank You and Good Luck!!

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1340216198

3697. FA: Terk Advantage AM Antenna

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-18 02:01:52 UTC
From: Daniel Simpson <dzan@qwest.net>
Message-ID: <170320022001526451%dzan@qwest.net>
Source record: 45902
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment

FA: Terk Advantage AM Antenna

Finally an AM antenna that is truly beautiful!

When appearance is an issue you finally have a great choice! It has most of the power of a Select-A-Tenna plus it is a handsome addition to any decor. It comes with wires like the Select-A-Tenna Hardwire model for direct connection to your stereo or can be used like the regular model Select-A-Tenna. It certainly blows away any of the smaller antennas supplied with a stereo. Size: 9.5ï¿½ high.

The Terk AM Advantage AM antenna dramatically improves the AM reception from any receiver, tuner or portable radio. Its unique passive wireless technology eliminates the need for connectors, batteries and power cords ï¿½ simply place the AM Advantage near the receiver or radio.

The AM Advantage combines wireless convenience with advanced tuning technologies such as Terk's exclusive Pin-Dot Pre-Tuningï¿½ that zeroes in on even hard-to-get stations by tuning the antenna to the station's frequency.

Features:

* Pin-Dot Pre-Tuning dial adjusts antenna to a specific frequency for best reception of individual stations
* Compact design allows easy placement
* Non-skid base keeps antenna in place during adjustment
* Reception pattern: Omindirectional
* Dimensions: 9.5"H x 9.5" W x 2.5"D
* Wire For Direct connection

AM Advantage Q&A
Does this antenna need power for it to work? Also, how can I connect it to my radio?
The AM Advantage is designed for "wireless operation"--that is, it does not need AC or battery power and will actually provide signal to your radio or receiver without having to be connected with wires. However, if your radio or receiver has connections for an external AM antenna, we supply a wire with the AM Advantage to connect the antenna to the input, should you choose to do so. The solid black wire connects to the terminal on the radio or receiver labled "AM in," while the wire with the white stripe on it connects to the terminal labeled "ground."

Can I extend the wire on my AM Advantage to place it on a windowsill or somewhere away from my receiver?

You can extend the wire with by splicing it with insulated doorbell wire, which is available at any do-it-yourself electronics or hardware store. However, we do not suggest doing this, because the length of the wire is calibrated to correspond with the tuning dial on the AM Advantage. When you extend the wire on the AM Advantage, you also change the resistance of the antenna, which will cause the station indications on the dial to be inorrect.

Why does my antenna work better when I touch it?
When you touch the antenna with your feet on the ground, your body is actually acting as a giant antenna and affecting your AM Advantage's reception. You have to let go of the antenna and move away from it to determine its reception performance.

Can I make the wires on my antenna longer?
No. When you make an AM antenna lead longer, you make it more susceptible to interference. The longer the lead, the more interference you are likely to hear. Also, lengthening the cable will change the impedance of the antenna and degrade reception performance.

Why does the antenna work better when my radio and antenna are next to a window?
Many building materials can affect AM and FM signal reception. Metal, brick and stone between the radio station and the antenna will decrease the strength of the signal. to the antenna. However, glass does not block radio signals, and locating your antenna next to a window allows the antenna to receive a cleaner, stronger signal.

This unit is in good to great shape. It shows some scuffs in the rubber base. and that is all.

I accept Paypal, Billpoint & Money Orders. $9.00 for shipping-Continental US only. Insurance optional at buyers expense. Winner to pay within 7 Days of auctions close. Email me with questions.

Thank You and Good Luck!!

There is absolutely nothing wrong with it. Sometimes, in certain crowded
environments, there are intermod problems. These occur with almost any 2M
rig on the market incl. the FT-1500.

'The best scanner ever made'? Boy, that's what I call going out on a limb. You've obviously never owned a REAL scanning receiver. I can think of at least 10 that make the 2006 look like what it is; a cheap Radio Shack 'scanner', albeit the best of a bad lot. To get a serious scanning receiver, you have to pay serious money. And US$210 ain't gonna do the trick Jim. Try an Icom R-8500 if you want a REAL scanning receiver (sorry, I hate the word 'scanner' as it conjures up the sort of cheap & nasty efforts made by Uniden et.al.). You'll be glad you did. Oh, and by the way, anything with gaps doesn't count ;-).

> (MYCall was NOCALL, etc.).

I tried to use a Tiny-2 MkII and a generic TNC-2 compatible in a mobile situation.

The devices were very prone to an apparent re-initialisation of the configuration to some cold start values. I could improve both devices by installing brown out protection in the CPU reset area. The brown out protection is to prevent the CPU running when the voltage got too low to be reliable, and both TNCs suffered from that problem when the vehicle engine was cranked. While it improved things, the TNCs would still occasionally cold start.

This indicates to me that the way in which writes to RAM are handled are prone to power loss during the process and are inherently unreliable.

The best answer seemed to burn an EPROM with customised power on defaults.

I asked Paccomm if they had info on the data areas in the EPROM so that I might burn custom cold start values, but they didn't reply (no surprises there). I just put that down to experience like the other problems with the Tiny-2 (incorrectly wired modem disconnect header, charge pump capacitors installed incorrectly).

Bottom line is that the TNC-2 has more capability than required for APRS and common implementation (like the Tiny-2) are not robust. If you must use a TNC-2, find a ROM image that is usable for APRS and that has published cold start data vectors so that you can make sure it cold starts the way you need.

3702. BC100XLT Repair

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-18 03:50:28 UTC
From: ballgofar@retardsrule.com
Message-ID: <302f180.0203171950.314ff771@posting.google.com>
Source record: 45907

Can you tell me how to find this Q201 everyone seems to be talking about?
I have a BC100XLT that has all the symptoms of this seemingly coomon problem yet I dont know how to locate it on the board. Any help would be greatly apprciated. Someone HAS to have done this repair?! PLEASE HELP if at all possible.

Thanks,

Paul

Uniden/Bearcat BC200XLT Portable - Loss of Audio and Dial Lamp
If you can program frequencies into your BC200XLT but there is no audio and
the green backlight no longer functions, a tiny transistor may have failed.
Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY).
Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT.
Its main purpose is to switch off power hungry stages of the BC200XLT when
the CPU thinks the NiCd voltage has fallen below a threshhold. That's an
attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black
multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in
the scanner drawing too much current through it. In one case, capacitor C36
shorted. It's a 220 uF 10v electrolytic, located on the component side of
the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he
substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass
Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail

>being in storage for a few years it is now inoperable.

A cap has leaked on the audio amp sub board. Probably has eaten all the tracks off the board....are you good at microsurgury? Before you get upset at me, please understand that I have an identical unit here....exact same problem. Seems to be a common Kenwood flaw, esp on the TH27. They also cannot repair it, according to the techs with whom I spoke. I do have some info if you want to tackle it, tho.

Sorry....time for an Icom or Yaesu (heck, maybe even an Alinco....some of the newer ones are actually nice!)

Andrew

>
> If it worries you, you could always mount an extra muffin fan behind it.
> That's what I did.
> Hehe. The fan is almost as big as the radio. <<g>>

I took the back of an old puter power supply with the fan, and made
one to stick behind my 706. Being it's on a "U" type frame, it stands
up by itself. I just place it behind the rig if I need it. I only use
it for SSTV usually.
I just let the rig fan run for normal stuff. BTW, you want to blow out
the rig every once in a while to clear the dust out if you are in a
dusty area. Being the fan runs so often, quite a bit of dust will get
drawn in after a few months/years. Most gets drawn right up though the
middle of the radio. MK

3708. Kenwood TM-742A, no sound on PTT after using wrong MIC (Yaesu cable)

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-18 05:31:39 UTC
From: reinhardsual@yahoo.com
Message-ID: <304226a3.0203172131.6b710d7@posting.google.com>
Source record: 45913

After accidental connection of Yaesu MIC into Kenwood TM-742A, the 742
has no voice on PTT. The rest is normal, only NO AUDIO transmitted
when the PTT is pressed an talked via mic (Kenwood mic of course :)

Question: can anybody hint me what part(s) to be replaced /suspected?

I misplaced the Schematic diagram, can somebody help me to get one?
(Or tell me where to get one).

Thanks for your help.

>>Or better yet, an R-9000.

No, not 'better yet'. I have sold one of my R-9000's, as they are pretty old
technology nowadays. After all, they were really only an R-71A and an R-7000
in the one cabinet, with a CRT display and 1000 alpha-numerically labelled
memories. The performance of the R-8500 is actually better than the R-9000,
as is the NRD-545, which is what I am using forr HF. If you want an R-9000,
I can let you have my other one, complete with an SP-20 speaker, for US$2500
plus freight. As they currently sell for around the US$12,000 mark, that has
to be a good buy. But don't let the CRT die, as Icom are no longer able to
supply replacements. Still interested?

From: "A. Domonkos" <capt-tripps@comcast.net>
Message-ID: <3C960299.6C4E9C33@comcast.net>
Source record: 45923

I've found 2 manual interfaces circulating on the web that can be used to manually control the AH-4 auto tuner. There is a simple version that is nothing more than a switch, LED, and resistor, and another that is more elaborate using a micorprocessor controller.

The designer of the micro controlled unit criticizes the other manual interface saying the 'relays may switch under load and you can not tell if the tuner has tuned'.

I'd go with the micro controller tuner in a hearbeat but have yet been able to get the details of the circuit, specifically the micro code, from the designer.

Has anyone used the simple manual interface and if so have you encountered any 'glitches'?

TIA

No parts are available from National Parts. I've heard someone on the net who has an aftermarket LCD pannel. This is the most offen replaced part.

Another issue is E-Bay. It's unrealiatic to use e-bay as any form of price gage.
E-bay is an auction a virtual one but an auction just the same we all been to the real live ones. It's an emotional ride. And quite offen we pay more for an item MUCH MORE that we planned or the item is really wort at a FAIR MARKET VALUE. I know been there done that...

But to try to base a price on e-bay is just silly. As we all know the WIDE varation between prices is proof that someone will pay $75 for a PRO-2004 and the next day $350 for one.

Just my .02

You will only pay MUCH MORE on Ebay if YOU bid that amount, if you bid a high price, then expect to pay a high price.

well thats one possible view .... more realistic speaking " ebay " is
THE price determining mode of current times. If an item consistantly
sells on ebay for $200 then that is what a person can get for it and
what it's worth, period. It doesn't matter what you " might " luck on
it for at a swap meet .. even if YOU buy it for $75 ..you can still
sell if for $200. That is what it is worth ... not what you stole if
for.

>
>But to try to base a price on e-bay is just silly. As we all know the
>WIDE varation between prices is proof that someone will pay $75 for a
>PRO-2004 and the next day $350 for one.

actually this thought isn't up with modern times either. Have you
ever heard of the Foothills Swap meet ...?? It is / was the largest
electronic swap meet in the world ..! It is held all summer long at
Foothills College in the silicone valley of coastal California.
(every weekend)
It used to be the greatest electronic windfall since popcorn ..!
ALL the latest and most exotic surplus and ham gear was always
available there. The event was held at Foothills because it is in the
electronic toy mother lode ...in silicone valley. WELL ....
that was then ..NOW (in the last two years) ..it has fallen into
disarray ... this because ALL the good stuff is being sold on ebay and
other auction houses and there is NO need to leave your living room
to get the same stuff. Also ..ebay has actually driven DOWN the price
of most sold stuff sold at Foothills. The reality is that Tek scopes (
as a typical example) that sold at Foothills for $600 to $800 each ,
are selling on ebay for $250 now. HP spectrum analyzers that sold
regularly at Foothills for $850 (the price fixed by groups of local
vendors to maintain profit levels) now sell on ebay in the $450 to
$550 range. This because those same vendors have to compete with the
whole world now and it drives the prices down.
There can be a certain amount of emotional buying on ebay but it

isn't the norm and doesn't happen as often as you would want. I have an ebay rating of nearly 300 and can say from personal experience that emotional wild budding is VERY rare ... more the case is (in reality) multiple scmemes to drive the prices donw by last minute torpedo bidding. The act of bidding only at the last minute to get the least high price and be the last , highest bid, is the norm on 99% od all sales. If you sell on ebay , you know what I'm talking about. I wish I could run across those emotional bidders that you mention , but NEVER have.

like it or not ..ebay is a phenonom of the current times ... maybe even the example of all auctions of the future. In my own experience , it provides ME access to items I could NEVER find elsewheres ..and at prices set by the public bidders at large. There bidders , nearly all , trying to (like you) get something for nothing.

my .02 cents worth also ..

>
>
>Just my .02
>
>JM

BTW: do a ebay search of pro-200Xs for current and closed out auctions and you will see that there has been NO emotional wild bidding at all. The prices ALL average in the same ballpark (as another poster has already noted) .... what " could be " and " what is " are quite different things.

Those Icoms are hard to beat, if you can find them at a decent price, scoop
'em up.

I have had those twins for a long time, and they are great.

On the other hand, you might find that a combo 2m/440 base rig would be
cheaper, but I cannot recommend a specific model.

Good Luck--

I think the filter model # is YG-455S-1, to plug into the large Xtal
slot into a Kenwood TS-450SAT.
This filter was stock in the TS-950SDX
Would also consider an International Crystal equivelent.
Please email me direct with price shipped to Vermont.
Tnx/Barry N1QWA

NO, but I've heard of FOOTHILL COLLEGE that isn't in a RUBBER (Silicone???) VALLEY but in the northern edge of Silicon Valley and isn't in COASTAL California either, but on the inland side of the coastal range, separated from the coast by a mountain ridge of a couple of thousand feet and near San Francisco Bay.

I think you're getting carried away. The swap meet had gone downhill well before eBay became as popular as it now is. Going to Foothill you'd find 90% garage sale stuff and if lucky 10% electronics stuff. A lot of the JUNK for sale was the dregs of computer companies, having little to do with radio or electronics in the sense that those who grew up in the 1950s 60s and 70s were used to. People seemed to think that garden tools, cheap import household tools, old clothing and the like were appropriate for an electronics swap meet.

Four or five years ago I got tired of having to sort through all the crap to fine so little that had anything to do with electronics. I rarely bother going there anymore and consider it amazing if there are 3 or 4 sellers who are selling anything remotely related to "electronics" and "radio" as it was many years ago.

The PRO-2004 is thought by many to be a better scanner than the 2005 and 2006. The case is metal and the performance comparable if not a bit better according to many.

If you don't like the price somebody asks, don't attack him or the price, just move on and DON'T BUY IT!

I think a lot of people have too much time on their hands!

Just for the people who have helped, thank you!
I tried the "in a pinch" idea of putting a small
wire between the collector and emitter and that fixed
my original working one that had no other problems.
(I had tried one board from a nonworking scanner in
my working one and it shorted out). So now I am back
to having one working BC100XLT and one Non-Working one.
If anyone knows troubleshooting techniques I would
apprciate the input.

Thank You all!

3740. Heathkit SB-200 question

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-18 19:41:44 UTC
From: Tom <trg46@charter.net>
Message-ID: <u9cgnspdnfg6b7@corp.supernews.com>
Source record: 45945

I have an original SB-200, now 24 years old original tubes 572B's. I would say over the years, the amp was not used very much. The amp tunes up fine - 500 MA and according to watt meter putting out nearly 700 watts on 15 m -- easy 600-650. However, I notice the plates of the 572B's turn pink to red very very easily and Ive kept the tune ups to a few seconds at most when keying down.

Another test I did was just to put the amp in transmit with NO drive - just idling current which is 80 ma - after about 5 minutes or so -- I again notice the plates turning a light color of red like they are getting hot.

Is this normal??? The voltage is 2,400 on meter, when key down the voltage drops to 2,150 volts. Almost 300volt drop - is it time to replace the power supply board??? is that much drop normal???

After 24 years - is the age of the tubes along with all the turning off and on have they taken their toll ??? again, output is good but they sure get hot and turn red in a hurry. Antenna SWR by the way is just about FLAT, no reflection on any of my meters.

I was just trying out an Ameritron 811A amp with 4 811A's - at most could only get 550 watts out on CW on 15 meters - which is the better amp??? SB-200 with (2) 572B's or the Ameriton 811H with (4) 811A's????

I like the FT736R from Yaesu. Also has satellite capability. 70 cm/2m
standard, can add 2 modules for 6/220/1.2gig (tho modules are getting rare).

That's about where I would expect them to be. When I saw the post I was thinking $125 - $150 would be fair for a good condition to mint, $150 - $200 for a very mint to new in box. I wouldn't worry too much about speed or channels compared to the 2005/2006's since the 2004 is capable of just about the same once you dig into it, clip this, replace that. About an hour's work for someone that knows the rigs. About a half day for someone who doesn't.

I don't have my RS catalogs handy, but I believe it was $399 or $419
regular and $369 on sale. Same as the 2005, more or less. I'm thinking
they both started at $419 and ended up at $399 a few months after
release. Anyone recall?

From: tek_guy@hotmail.com
Message-ID: <cbf4a67d.0203181647.5ed86611@posting.google.com>
Source record: 45855

I'm looking to get some sort of DC power cable for my VX-5R so I don't have to worry about losing battery power while on the road. Before I go and buy Yaesu's cable, I'd like to see if I could find the same thing cheaper somewhere else, specifically if I could find a cell phone DC cable with the same specs.

However, to do this I need the amps required by the radio and DC plug type. The spec sheet says 1.9 amps maximum - so I'll add an amp or two for a saftey margin. However, I don't know what the plug type is. Center positive, negative shield is what I'm assuming, but does anyone know? Also, what size is the plug?

Thanks for any help in advance.

3753. Icom PCR1000 serial cable substitute?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-19 00:58:08 UTC
From: sphipps <sphipps@joplin.com>
Message-ID: <u9d391kvv9uua2@corp.supernews.com>
Source record: 45857

Just bought a used PCR1000 at a hamfest minus the original serial cable. I've tried 2 "off the shelf" (Belkin & Radio Shack) male to female 9 pin shielded / grounded serial cables. Both produce horrible RF interference. Icom wants $35 for the original cable. Would the original cable solve my interference problems? I'm thinking it might since I had a new PCR1000 last year with the original cable and never had problems like this.

I've ruled out monitor interference, etc. Appreciate any help.

Thanks,
Steve

Cant speak for the VX5, but the cord for the FT-50 also had a bit of
filtering added into the plug.

AFAIK, the cord is the same for the FT-10/40/50, VX5, and VX-100/150.

I don't have exact dimensions, but it is a fairly common size.

I have the AC battery charger here, which is spec'ed at 15 V, 200 ma
output (for charging, not operating) and center positive.

Happy trails,
Gary (net.yogi.bear)

well ....don't attack the messenger. I'm only repeating the
laments of " huge " dealers that no longer go to the swap meet ..
because " all the best stuff is sold on ebay now and little
or none of gets to the meet anymore. "..! Consider that " other "
people may not have shared YOUR appreciation for certain types
of items and felt differently about it than you. You are entitled to
your interpretation of things ... others may disagree " strongly "
with your perspective. One particular person (that I know) lived and
breathed the swapmeet and the telescope meet down south.
He still goes to the southern meet ...but has abandoned Foothills
for the reasons I mentioned. His life is less for the experience now,
and THIS remains the personal observations and experience I have.
(and a reflection of HIS thoughts of how it got that way)

>
>The PRO-2004 is thought by many to be a better scanner than the 2005 and
>2006. The case is metal and the performance comparable if not a bit better
>according to many.

I agree about the shielding .. in general... but both scanners have
the same (excellent by today's standards) internal shielding. The
newer models have faster cpu clock speeds and thus faster
channel scanning speeds. This speed translates to much faster search
speed (up to 100 cps with the 2006 / probe) when using computer
control too. (the faster CPUs seem to track much better) . Most of
my pro-2005 /6s use the opto computer boards ..I have no remaining
pro-2004s. Another problem with the older 2004 is the severe cases of
circuit connector arthritis they seem to have. Tho, this will probably
show in the 2005 /6s eventually too. In my own experience the pro-2006
more than the 2005s and WAY more than the 2004s seems to do
a better job translating the digital outputs of a slicer disc tap.
None of my 2005s do well at all on several of the disc output decode
programs ..and only a couple of several of the 2006s preform well
on these same programs. (ie: mdtmonitor, mobitex, ardis, banpaia)
These are my own experiences..your's may be quite different. Even
location can play a role in some of these problems. In my location ,
humidity is nearly non-existant .. much of the year.. (mid central
valley) ... tho helpful in ways ..it too can be detrimental to my
equipment , drying out the rubber and silicone parts and causing
lots of other problems.

>

Complete Ten Tec Century 21 system for sale.
Comes with matching calibrator, and matching keyer
Dial slips initially, but then is ok.
Works very well.
$175 plus 10 shipping.
Frank Krozel
TEL: 630-924-1600

3766. refill cartridge, not 'kit', thanks

I have tried the ''refilling the printer ink cartridges route,(messy)
what I would like now is to
see if I could find some company that refills the cartridges
themselves, and there by cutting down on the 'high cost' of the
originals. Anyone
out there have any 'input'. thanks, cl.

> Is this normal???

Yes. 2.15kV x 80mA = 172W of dissipation in idle, i.e. tubes are dissipating the power as heat only. Red is good, orange not so good, white is bad.

> The voltage is 2,400 on meter, when key down the voltage
> drops to 2,150 volts. Almost 300volt drop - is it time to replace the power
> supply board??? is that much drop normal???

I'm guessing the SB-200 employs a voltage doubler technique to obtain 2400V, but even if it's not so, the light duty supplies like this are notorious for being soft. This is normal and replacing anything in the supply will not improve it. Having said this, however, there are some improvements you can do in both the amp and the supply to improve reliability and operation: QSK, soft start, new HV diodes, quieter and stronger fan, anode parasitic suppressors, etc...

> After 24 years - is the age of the tubes along with all the turning off and
> on have they taken their toll ??? again, output is good but they sure get
> hot and turn red in a hurry.

More than before? Just about the only measure of the tube quality is its output - once you can't pump out what you used to, it's time to replace it. I don't see what would cause overheating; possibly a defective fan, overdriving, oscillation... Remember, the SB-200 is not a continuous duty amp.

> I was just trying out an Ameritron 811A amp with 4 811A's - at most could
> only get 550 watts out on CW on 15 meters - which is the better amp???
> SB-200 with (2) 572B's or the Ameriton 811H with (4) 811A's????

That depends on your definition of what constitutes a "better" amp.

>they both started at $419 and ended up at $399 a few months after
>release. Anyone recall?

I paid $399 for my 2005 in 1989. Sold it on ebay 10 years later for $375
and just bought another one on ebay this past year for $200 :) I missed it
and had to have another one :) So I guess the fair market value of the
2005/2006 has come down the last 10 years

They will do that after 5 min. Normal...

> SB-200 with (2) 572B's or the Ameriton 811H with (4) 811A's????

The plate dissipation of the SB-200 is 320 watts. The four 811's equals
260 watts. Assumming both have decent power supplies the sb-200 should
have a slight edge. Your amp sounds normal to me as long as the plate or
resting current doesn't creep up on you.
Stick a fan on top to help the cooling. MK

If it's like the 2500m, there are four of them. And it's very common
for them to all burn out. On the 2500, there is a dimmer control. Most
run at full bright and fry the bulbs after a while. If you replace
these, I wouldn't run at full bright. The bulbs on the 2500 are
soldering to the faceplate board. Fairly easy to get to. I think the
2400 is about the same if it has the orange "omniglow". MK

> thing cheaper somewhere else, specifically if I could find a cell
> phone DC cable with the same specs......

IIRC Yaesu sells a plain power plug with a yard-long pigtail for under $10, in addition to the more expensive cigarette-lighter and AC chargers. However the hi-$$ DC one incorperates filters and at least one OM had to add several to his cheap one else noise made his CPU act up. So, in the long run it might be better to bite the bullet and buy the good one.

Interesting - on the faceplate, it says "Submersible"!

I once let my young daughter, a semi-experienced sailor, go out in our little sailboat. She carried a VX-1R in case of problems, and I monitored the frequency from shore. Of course, the trouble she encountered was gusty winds that dumped the boat, and the ziplock bag containing the radio had a leak. No problem for her - she swims well, and I saw her problem from shore right away. The radio, however, took me many months to put back in working shape.

I'd love to have a handheld that could stand up to a quick immersion or a heavy spray off the bow. Nice feature!

Hello Group:

I am attempting to gather some information about the ICOM IC737 radio.
If anyone can offer answers/information to the following, I would be
greatly appreciative:

[1] What is the spec for the master oscillator, stability and
accuracy in ppm ?

[2] What is the readout resolution: two or three decimal points ?

[3] When was the IC737 first introduced to the USA market (year)
and what was its list price ?

[4] Does this radio work from an internal power supply? is it a
switcher ?

[5] What are the included stock I.F. filters? Are there optional
narrow filter slots available?

[6] Does the radio include a stock internal antenna tuner? or
optional accessory?

[7] What is main differences between IC737 and IC737A?

It is my understanding that this radio does not include a VOX
function; is this true?

I also believe that it comes with a 2.1 kHz bandpass filters and no
other filter option exist; is this true ?

Please respond also to my eMail: wa.tworsx@verizon.net

Thanks and Have Fun.

The 737 was reviewed in the August 1993 issue of QST. The review is available at the members-only part of the ARRL website, or, I'm sure, you can order a reprint from ARRL. The review should have most of your answers.

Vince,

I just purchased a 737A and can answer some of your questions.
The 737 is powered by an external 20 - 25 amp supply. It can be used mobile and has a very effective noise blanker on ignition pop. The stock filter is I believe the 2.1 not other SSB filtering options are available. However there are many CW filter options and they can be installed at either of both IFs. International Radio makes after-market filters for the 737. The AM filter is a 6khz unit. I have gotten excellent reports on the transmitted AM audio. The readout resolution is 2 decimal points. The antenna tuner is a stock item and works extremely well.

I do not know the master oscillator stability numbers but there was a high stability crystal oscillator available for it. The VOX question is interesting. I have never used VOX operation so I would not miss it if it did not have it. I do not think it does. It does have semi or full break in CW with a pretty nice built in keyer.

I think this radio came out in 1994 and was made until about 1996.It is a bit of a rare bird as I understand it. The list price was $1,795. They are available used between $550 - $650. It is a large heavy unit and has about the largest and brightest display I have ever seen. I think the difference between the 737 and the 737A was a delay adjust for the semi break-in function.

I personally like the 737A

Source record: 45887

The main difference I have found is the control unit & PLL is completely redesigned in the "A" and integrated into one unit using surface mount tech instead of thru hole.

The stability specs are worthless. They are 1-60 min after turn-on <200hz, after that <30hz BUT the frequency is not given. If that is for 10m then pretty good numbers but how about if it's spec'ed in the AM band, not too good. It doesn't say....

May you never have the display bulbs go out. The display itself with 74 pins must be unsoldered to replace the bulbs. It takes abt an hour with the right equipment..

I have the yk88c1 cw filter and would trade even for yk88s1 or yk88sn1. Fits ts850/450/517 and others.

Anyone have one they are not using?

Thanks, Mark.K8VF

3789. Modifying Speaker/Mic

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-19 19:58:09 UTC
From: Josh Koffman <listsjosh@3mtmp.com>
Message-ID: <3C979851.7241595B@3mtmp.com>
Source record: 45892
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Hi all. I think I might be able to figure this out on my own, but I'd like to avoid reinventing the wheel if possible. I can't seem to find anything by searching on the web, so I'll ask here.

I want to get a speaker/mic made for ICOM/Maxon type handhelds to work with a Motorola commercial handheld. The Motorola is an LTS2000 and has the same speaker/mic as the GP300 series. Basically the speaker is always connected, and the PTT is just a switch in series with the microphone. The radio senses when you close the switch, and then goes into transmit. Any ideas? I'd like to build a seperate box to do the conversion, that way the speaker mic will work on both units.

Any and all help or pointers for info will really be appreciated. If possibly, can you also cc a copy of your reply to joshy@3mtmp.com? My newsgroup access is really bad.

Thanks in advance!

Josh

Nobody gets a break on this forum. Since you can buy a Yeasu, Icom, or Kenwood 2 meter radio (latest model) from just about anywhere for under $150 ($139 for the FT1500M at AES - which I bought for my wife) -- the best thing would be to auction it on EBAY.

Chances are that you would get about $1,800 for it.

3802. RFI from oil furnace

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-20 01:50:52 UTC
From: rscoel@aol.com
Message-ID: <20020319205052.15176.00001799@mb-fx.aol.com>
Source record: 45755

I have a friend who has RFI problems. One problem was fixed by having power company replace a cracked lightning arrestor on the overhead power lines. The cracked arrestor was spark gapping causing RFI. The other problem he has now is his oil furnace. When it goes on it causes RFI on his radio. He thinks it might be the electrodes since the motor is AC and has no brushes. Can anyone offer any help.

3803. Software for PCR1000

Message-ID: <u9g0be1egg8l9c@corp.supernews.com>
Source record: 45756

I was wondering how many people out here us the pcr1000? On my older system running the 16 bit control program ran far with 95 98 ME. Tried to get it to work on XPPro no joy. Talked to Icom they suggested I buy a 3rd party package. I don't think this is right. They have a 32bit program for the PCR100 wonder how hard it would be to modify it for the PCR1000. At this time I cann't aford to buy any new control software and was wondering if anyone know of a freeware version. Thanks

Since most contacts are made off of local repeaters, it is not real critical to have a great receiver in a handheld. It's not like you'll be working distant DX or anything. Having said that, most of the handhelds are on about the same level, receiving-wise. Stick to the well known brands, Icom, Kenwood, Yaesu, Alinco and Radio Shack, and you'll be okay.

I'm looking for a non-working Yaesu FT 209R or RH h.t. for parts. I'm restoring my old unit, and need the front panel/keypad to complete the restoration. If anyone knows where I can buy one without spending a fortune, please let me know. I can be reached at:
dboss@kscable.com
Thanks, and 73's. N0ZYG

3806. Re: RFI from oil furnace

I think that the ignition to an oil burner is a spark-gap transmitter. Two electrodes are gapped for a continuous spark, which is provided by a transformer which brings the voltage up into spark range.

Thankfully, ignition lasts only 30-60 seconds or so...just long enough when you're diggin' for some weak signal in the mud.

Don't think there is a work-around on this problem --- except a woodstove and electric water heater.

Guido

3807. Kenwood TS-430S power plug

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-20 08:28:43 UTC

Hiya all

My father (ZS2AW) is looking for the power plug pinouts for a TS430S
he was given recently. He was not given the power plug/cable.
He has got it working in RX, but says there is some special
connection to get TX working. Sadly, his sight is failing
and he can no longer see to figure these fiddly things out for
himself (he is 81 after all :-)

If anyone has the info, please post here, I will check back over the
next few days. In fact if anyone has a PDF of the entire manual that
would be welcome via email (the email address NoSpamdaf@iwr.ru.ac.za
works as-is).

Source record: 45765

I am considering a compact all-band radio for use in my motor home, and the FT-100 and IC-706MkIIG appear to be the best candidates. What is the word on the bands on these radios? Is one a better value than the other. The matching ATAS antenna for the FT-100 seems to be a major plus for that radio.

When I was more active years ago, I recall that there was a cable that was the size of RG-58 but with more the electrical characteristics of RG-8. Can someone tell me the designation for that cable?

Lee

The FT990 has a digital filter that lets you narrow the receive passband. You can also install optional IF filters that seem to do the same thing. What are the pros and cons?

Also, the SP-6 speaker has filters on it as well. How do they figure in?

I recently upgraded from the TS-430S to the TS-570D. I did not change power cables; therefore, the original power cable for my 430 is now connecting the 570 to my power supply. If it's any help, the power plug pinouts have not changed. Kenwood's DC power cable, the PG-2Z, will work if you can get one.

This is a view of the mating connector of the DC power cable, not the connector on the back of the radio. This view is with the latching mechanism on top and looking into the 'business end' of the connector.

+ - nc
+ - nc

As you can see, not all 6 positions are used. The 'nc' stands for 'no connection'. 2 pins are utilized for both +13.8 VDC and ground.

Therefore, if you could look at the power connector of the 430, it would have to be like this (again, latching mechanism assumed to be on top):

nc - +
nc - +

Hopefully this helps,

Tony - WA6HTF

RG-8X is about the size of RG-58 but uses a different adapter for the PL-259
connector. Cannot help you much with the Yaesu vs. Icom question.

HI,
In my opinion the Icom is a better rig has a much better reciever than the yaesu and you will hear a big diff in audio tx quality from the icom .. The 100D is very raspy and you have to use the processors all the time to get 100W. Its a decent rig but the quality of yaesu really sucks in the last 3 years. What ever your choice dont buy a yaesu dual band rig HI HI . RG8 is great coax dont even think about 58.. its junk and for cbers. You can run RG8 In a mobile or house. As long as you are not running power.. If you are I suggest you go to RG213 I have run that for years with no problems and its direct bury too. Stay way for 9913 stuff it gets moisture in it and poof to VSWR.. take care

If the receiver is working , the transmitter should be working. As far as I know, there is no "extra" power connections. The power connections are very standard on those rigs. They are the same as icom. In fact, the one for the 430 will fit my ic-706. "six pin". The pins are wired as such..If normal, on the radio the locking "tab" is on the left side while looking at the back of the radio. Of the six pins, the two middle pins are ground, tied together. The two top pins are positive, tied together. The other two pins are not used. I was just thinking...maybe they split off from the twin hot lines, but I'd always assumed they were just tied together to handle more current. That might explain why no xmit. But it's also possible the finals are gone, or a fuse is blown. MK

Hi !

Thanks for your answer. I am going to seek some information on the brands you tell me. I know MFJ (antenna couplers, grip-dip ...) and Elecraft (famous K1&K2) ..... but I have no idea about TenTec and SGC. In fact, I am looking for other products than Japanees. I know that North American products are (very often) well made.

Thanks for you help

Regards

Jean-Marc

3830. Any news on successor to JRC JST-245?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-20 20:17:41 UTC
From: Harry Reed <doon@therd.com>
Message-ID: <3c98ec6c@post.newsfeed.com>

*** post for FREE via your newsreader at post.newsfeed.com ***

Hi, All!
My venerable old JRC JST-245 although a great rig is getting a bit "long in the tooth". Does anybody have any ideas what JRCs plans are (if any) for a successor to the '245? I noticed on the Universal Radio's WWW site that JRC will be introducing a new Linear Amp (JRL-3000) so they are still in the Amateur business, but I have yet to hear/see anything about a replacement for the JST-245. Anybody have any info on this?

73's

3831. ICOM PS-85 question

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-20 20:33:35 UTC
From: Flasher <howharris@hotmail.com>
Message-ID: <kx6m8.49722$1S3.1486892@twister1.libero.it>
Source record: 45784

I have a PS-85, American version, 120 volts input. Can it be modified to a
220 volts input?
Does anyone know how to do this? Any info would be of great help.

Flasher

Should only be the taps on the transformer. Primary side..of course! Should be clearly marked as well.

I built mine in 1969 and still use it. Original 6146's, too! That
will change at this year's Dayton Hamvention, though, now that the XYL
has given permission to buy a "state of the art" rig. I've never been
on the WARC bands, and people tell me I need to....

From: Joe <pester_joe@hotmail.com>
Message-ID: <%R7m8.86136$q2.9350@sccrnsc01>
Source record: 45788

Hi,
I need some advice on choosing my first HF rig...

New VS old? If I buy an older radio, maybe an IC-735, how hard is it going to be to fix it/find parts when something breaks when compared to a new rig?

I'd like a rig that's good for shortwave listening, PSK-31, RTTY, CW, and voice, preferably in the same price range or lower than a new IC-718.

Specific suggestions are welcome. Thanks in advance.

The JRL-3000 is also known as the Kenwood TL-933. (Both JRC built)
JRC just introduced an all DSP based receiver, and a DSP based transciever
is rumored to be in the works, but could be a year away yet.
I love my 245 even more now that I put a DSP-59Y/SP-5 on it.

That sounds sweet, but I haven't even been on the air since about 1995, yet
alone HF.

Is it true, what I hear, that amateur radio has been dying out lately, due
to cell phones of all things? You can't exactly have QSO's with people all
over the world, using cell phones.

American mfgrs of Amateur radio gear?

SGC - makes the SGC 2020 transciever. Rugged little beast that is military grade in construction.
Ten Tec - makes a whole range of transcievers and has one of the most loyal followings in ham radio.
Elecraft - makes two wonderful radio kits that get universal praise for their design and performance.
Patcomm - perhaps the smallest ham radio manufacturer in the US. Their products seem to be little known, but get good reviews.
MFJ - their US made SSB and CW 90-series radios are very popular and seem to be very well made.

Now, who says the US can't make Amateur radio gear? I think we do pretty good, thank you!

OK fellows, who did I forget to include in this list?

73!

The normal oil burner igniter is nothing but a big spark plug and is a really big RFI producer. You should try grounding all of your radio equipment (the external AC powerpacks that some radios use does not really provide a good ground - sometimes none at all). After grounding your radios and trying an AC RFI filter on the furnace circuit you might want to put your radio(s) on a UPS that runs off the batteries (AC charges the batteries and the batteries, through an inverter, provide clean AC out).

After that is back to standard RFI detective work. My furnace is also an 'arc-er'. Grounding the radios, replacing the furnace electrodes (new burners are better designed to produce less RFI) and using a UPS solved almost all of my RFI problems. I only have some RFI on the 500-2500KHZ (.5 to 2.MHz) bands left - working on those with some chokes and repositioning some antennas.

Goof lick and happy dx'ing.

WOW, that brings back memories! What a pain in the A*^... I lived in 2 different houses for close to 2 years total in time with an oil furnace. I can sympathize with you. BUT, and you may have the same problem.. where I was, everyone else had oil furnaces too. So, even if you got your own mess cleaned up, you still got some RF from the neighbors.

Absolutely no question...706MKII is a better radio in ALL ways. Be sure to get the DSP board and the ssb filter regardless of which you choose. I've run the 706MkII for three years now in my car, and it's absolutely bulletproof.

Use a Screwdriver type antenna and you don't need a tuner...which just eats power anyhow.

Don't need the DSP board with the MkIIG.. it comes with it... I have to
agree on the narrow sideband filter, though.. Makes a world of difference
in the rig.

Amateur Radio Newsline Report 1283 – March 15, 2002

Amateur Radio Newsline report number 1283 with a release date of Friday, March 15th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Restructuring at the FCC should not impact on Amateur Radio and a first for the Dayton Hamvention. These stories are first on Amateur Radio Newsline report number 1283 coming your way right now.

(Billboard Cart Here)

**

REGULATORY ISSUES : FCC REORGANIZES LATER THIS MONTH

A reorganization of the Federal Communications Commission is set to become final later this month. This, as the agency stresses that realignment of responsibilities between various bureaus will make it more efficient and help it better respond to a changing technological marketplace. Amateur Radio Newsline's David Black, KB4KCH, takes a look at some of the changes.

--
It's an independent government agency that reports directly to Congress. It's mission is to regulate communications. One of the services it oversees is Amateur Radio, but most observers of the reorganization of the Federal Communications Commission see little impact on hobby communications.

As part of the reorganization a new Media Bureau will combine the duties of the current Cable and Mass Media bureaus. The goal of the combined bureau? To treat competitors of multiple entertainment delivery systems equally and consistently. This includes broadcasters, cable operators and satellite service providers to name only a few.

Other changes include a renamed Consumer and Governmental Affairs Bureau. Also, a realigned International Bureau still will handle satellite licensing but most policy issues will now be the domain of the newly created Media Bureau.

These are just a few of many changes taking place. Most appear aimed at commercial interests. For ham radio, C-B, G-M-R-S and most two-way radio users the shift will probably be transparent. In other words, for these spectrum users and most others, it looks like business as usual within a soon to be restructured FCC.

From the South-East Bureau in Birmingham Alabama, I'm David Black, KB4KCH, reporting for the Amateur Radio Newsline. Don.

--

Congress endorsed the plan late last year. The FCC then approved the overhaul in January. The changes will take effect March 25th. You can read more on the web at www.fcc.gov. (ARNewsline (tm) from published news reports)

**

RADIO LAW: FCC REFUSES TO SIDE WITH CB'ER IN LOCAL CITATION CASE

The FCC has refused to hear an appeal by an Illinois C-B operator who was convicted of Disorderly Conduct for using an 11 meter Class D Citizens Band Radio. Amateur Radio Newsline's Norm Seeley, KI7UP, has the details:

--
Gary D. White is among the first C-B operators dinged under a new authority granted by the Federal Government to states and municipal law enforcement agencies. Authority to control interference caused by operators of Class D 11 Meter C-B radio sets.

White was convicted on a state Disorderly Conduct charge of operating his C-B equipment in an unreasonably loud, offensive, harassing or threatening manner. He was not convicted of violating any FCC rules. White believed that the citation was based on interference to a neighbors telephone and television receiver. This in itself is not a violation of FCC Part 95 rules. And because of this he also believed that local authorities had no justification to sanction him. So he appealed the conviction to the FCC.

But the FCC says that the proof of guilt on the Disorderly conduct allegation is not in its preview to consider. This is because no FCC rules were violated. Also, under a law enacted by Congress in November of 2000, state and local governments are free to enact laws to enforce existing Part 95 Citizens Radio Service rules.

Bottom line. The FCC will not interfere in the case and White will have to find other avenues if he wishes to continue his appeals.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

Congress enacted the law to give state and local authorities enforcement authority over 11 meter C-B operators due to the rising tide of unnecessary and harmful interference to other people using radio devices in near-by spectrum. This includes corded and wireless telephones, television receivers, stereo Hi-Fi sets and other consumer electronic gear. Ham radio is specifically exempted from the law and any ordinance it may be used to create. (W5YI Report)

**

HAM RADIO RIGHTS: NM. AND W.VA. JOIN THE PRB-1 BANDWAGON

The ARRL Letter reports that New Mexico and West Virginia have become the 14th and 15th states to adopt pro Amateur Radio antenna bills based on the limited

federal preemption known as PRB-1. Amateur Radio Newsline’s Jeff Clark, K8JAC, reports:

We have this report:

--
In New Mexico Governor Gary Johnson signed House Bill 314 on March 5th. This, after it easily passed both houses of the legislature last month with just two opposing votes during a short session that typically only deals with appropriations bills. Called New Mexico's "Emergency Communication Preservation Act" the measure was sponsored by State Representative Mimi Stewart and Senator Ramsay Gorham. It stipulates that municipal or county ordinances regulating Amateur Radio antennas cannot obstruct or preclude amateur radio service communications. Also, that such ordinances shall reasonably accommodate amateur radio service communications.

Here in West Virginia Governor Bob Wise signed House Bill 4335 into law on March 7th. The bill provides that antenna structures may be erected at heights and dimensions sufficient to accommodate amateur radio service communications but does not include a minimum regulatory height schedule. The measure also exempts Amateur Radio antenna towers constructed prior to the effective date from subsequent zoning regulation changes.

From Charleston West Virginia, I’m Jeff Clark, K8JAC.

--

In signing the West Virginia bill into law, Governor Wise, whose late father held the call sign W-A-8-A-Y-P, also proclaimed March 7 as Amateur Radio Operators Appreciation Day across the state. (ARRL)

AMERICA AT WAR: NEW TERRORISM ALERT SYSTEM

The United States has a new color-coded terrorism warning system. It was revealed on Tuesday, March 12th by Homeland Security chief Tom Ridge.

The five-level system is a response to public complaints that broad terror alerts issued by the government since the Sept. 11 attacks raised alarm without providing useful guidance. The lowest-status warning is green, followed by blue, yellow, orange and red as the perceived dangers intensify.

As the terrorism warning system was unveiled, Ridge said that the nation is on yellow alert. This means that the United States is facing a significant risk

of danger but not the highest stage.

The alert system is in force immediately for federal agencies, and Ridge is urging state and local governments to adopt it, too. It will be subject to a 45-day comment period, after which it probably will be revised. It's not known what part if any Amateur Radio will play in the new enhanced terrorism alert scheme. (Published news reports)

**

ENFORCEMENT: TAKE THAT UNCOORDINATED REPEATER OFF THE AIR

The FCC has told the operator of an uncoordinated North Carolina repeater to stop interfering with a coordinated machine, even if it means immediately taking his system off the air. This is the edict handed down to the operators of the NY4X repeater by FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth, K4ZDH.

--
Hollingsworth: " We also notified Richard Howell, NY4X, of Greer South Carolina and John Parker, AG4AZ, of Brevard Norrth Carolina that upon reciept of the letter, the NY4X repeater that they operate had to either shut down, obtain coordination or submit a detailed plan to the Commission to prevent interference to the KU4OL [repeater]."

"Now this interference has been going on for quite some time. We notified Parker and Howell back in November that something had to be done. Nothing was accomplished in regard to coordination and nothing was done in regard to the interference."
--

Hollingsworth letter says that Howell and Parker had more than ample time to fulfill their obligation under Section 97.205 of the Commission's rules. And late word is that the repeater has been shut down. (FCC, RAIN)

**

ENFORCEMENT: TAKE THAT BROKEN REPEATER OFF THE AIR

The NY4X repeater is not the only machine currently under FCC scrutiny. Another one is in Northern California. This one is having technical problems and is causing interference to machines on adjacent channel pairs. Again, the FCC's Riley Hollingsworth, K4ZDH:

--
Hollingsworth: "We notified Wendall Peterson of Walnut Creek California, operator of the K6POU repeater that more than enough time has elapsed for him to correct the technical and control problems with the repeater. His earlier response to our inquiry showed that the bandwidth was indeed so wide that it caused problems to two other repeaters. We have gotten complaints about that. And the repeater system is just not operating in accordance with good Amateur practice."
--

Hollingsworth says that his office expects the problems with the repeater to be corrected or that the machine will be taken off the air. He also gave Peterson 20 days from the date of his letter to respond. (FCC, RAIN)

**

ENFORCEMENT: THE RESPONSIBILITY OF REPEATER OWNERS

The FCC enforcement involving the NY4X and K-6POU repeaters are just the latest in a series of actions aimed at cleaning up the problems that have been plaguing the F-M community. Whether it's an uncoordinated repeater causing havoc to a coordinated machine, or a long established system in need of maintenance, the FCC's Hollingsworth says responsibility comes with repeater ownership:

--
Hollingsworth: "We want to emphasize that repeaters are voluntary. Nobody has to put one up. But if you do put one up you have a responsibility to maintain it, to get coordination if that's necessary, and to operate in accordance with good Amateur practices, especially if other repeaters are being detrimentally affected."
--

In reality, the only things the FCC is asking of those who own and operate repeaters is to be good neighbors and to adhere to the proper technical standards. In this way, the repeaters themselves can better serve their service area and the ham radio community in it. (FCC, RAIN)

**

RESCUE RADIO: KNOWING WHERE YOU ARE IN THE MID WEST

If you drive the highways and by-ways of Kentucky, you need never worry again about where you are. And if you get in a bind, rescuers will be able to find you. That is, if you are a ham radio operator equipped with a mobile APRS station. Jack Parker, W8ISH, of Amateur News Weekly, says that in his part of the world it is a mode that is truly coming of age:

--
Good news from the Kentuckey Automatic Position Reporting Society" their network of APRS digipeters is growing like well bred Kentucky Race Horses.

According to Brian Walker, KC4FIE, several new sites will be coming on line very soon. New digi's are planned for Grand Rivers, Morgantown, Owensboro, Lawrenceburg, and Dry Ridge to name a few.

The Murry State University club has added a digipeter and two stations along the Kentuckey – Tennessee border have extended APRS coverage into that state. These efforts effective extend the Mid-West network of APRS digipeters established by the Tri-State Working Group in Ohio, Indiana and Illinois.

If you need more information on the Automatic Position Reporting System just check the APRS Working Group website at www.tawg.org.

Reporting for Amateur News Weekly, this is Jack Parker, W8ISH.

--

With interest in A-P-R-S growing and ham gear that includes the mode as a standard feature, look for a defacto nationwide network to be in place by the end of the decade. (ANW)

**

HAMVENTION 2002: HAM TESTS WILL BE AT THE HARA

The Dayton Hamvention has asked that we pass along a correction to some information in its recently mailed pre-show brochure. The pamphlet incorrectly lists Meadowdale High School as the venue for Amateur Radio license exams. This is incorrect. The Hamvention says that all license exams will be held at the HARA Arena Hamvention site. (Hamvention(r))

**

HAMVENTION 2002: QCWA BANQUET

And attention QCWA members. This years annual banquet in conjunction with the Dayton Hamvention will be hosted by the South West Ohio chapter and will be held on Friday, May 17th. The venue is Alex's Continental Restaurant near Miamisburg. Starting time is 7:30 P.M. and reservations are required.

This years speaker will be General Raymond Moorman. He will be talking about the United States Air Force Museum and plans for the upcoming Centennial of Flight celebration in 2003. For more information and to make reservations please contact Ed Sonnanstine by e-mail to EdSonny@aol.com (QCWA)

**

CONVENTIONS - UTAH: UTAH HAMFEST

The 2002 Rocky Mountain Division ARRL Convention and 2002 Utah Hamfest will be held July 12th to the 14th at Ruby's Inn at Bryce, Utah. The venue is near Bryce Canyon National Park. For more information please visit www.utahhamfest.org on the world wide web. (Utah Hamfest)

**

CONFERENCES: ARRL/TAPR DIGITAL COMMUNICATIONS CONFERENCE

Technical papers are being solicited for presentation at the 21st Annual ARRL and TAPR Digital Communications Conference. The event will be held this September in Denver, Colorado. Presentations will also be publicized in the Conference Proceedings. Submission of papers is due by August 5th and in-person presentation at the conference is not required for publication. Conference registration and additional details are available on the web at www.tapr.org/dcc (TAPR, ARRL)

**

Here when you need us 52 weeks a year. We are the Amateur Radio Newsline, with links to the world from our only official website at www dot a r newsline dot

o-r-g.

(5 sec pause here)

**

NAMES IN THE NEWS: HELPING HAND NET

We want to take a moment to welcome a new and very interesting net to the Amateur Radio Newsline family. It is on the AD6XK repeater here in Los Angeles California on 145.440 MHz.

What makes this net very special is that its Control Operator Simon Rosconi, K6DXN, is visually impaired. According to Dave Estrada, KD6HDX, Rosconi lost his vision at age 6. Estrada says that even without sight, Rosconi works 40 hours a week, and still finds time to volunteer his time as control operator for the nets.

But Rosconi is not the only vision impaired ham involved. Estrada tells Amateur Radio Newsline that Brian Coponiti, KG6BVO, who is also partially blind, has also volunteered. Coponiti downloads and plays back Amateur Radio Newsline to the net.

Estrada adds that this particular repeater group also has two other operators that are visually impaired. They are Gary La Duke, WB6WJW and Ivan Simer, K6TTA. (KD6HDX)

**

NAMES IN THE NEWS: EDWARD T. CLEGG, W8LOY FAMILY CELEBRATION

A few weeks ago we told you about plans by the family of the late Edward T. Clegg, W8LOY, to celebrate the life of this ham radio pioneer. The gathering is being planned by Ed’s widow Martie, her daughter Linda and Linda’s husband Rob Mc Guffie, K2HZN. Recently, RAIN producer Hap Holly, KC9RP, had a chance to speak with Rob about the upcoming event:

--
NO TEXT AVAILABLE – AUDIO ONLY
--

Hap conducted an extensive interview with Rob Mc Guffie. It really tells the whole story of Ed Clegg and his famed Clegg Labs. Part 1 is online right now at www.rainreport.com or by telephone at 847-827-7246. (RAIN)

**

RADIO REGULATIONS: AVOIDING A PHONE NUMBER CRUNCH

The nation's supply of telephone phone numbers is depleting rapidly and the government is taking steps to make sure what is left lasts longer. Amateur Radio Newsline’s Henry Feinberg, K2SSQ, has more:

--
Over the past several years, area codes have multiplied to cope with the

explosion in technology. Regions have responded by splitting up area codes among geographic areas or laying another area code over an existing one.

But in 1996 the Federal Communications Commission banned such overlays dedicated to specific kinds of technology. The Commission enacted the ban because it considered separate area codes for cellular telephones phones and pagers unfair to wireless companies and their customers. This is because everyone would have to dial 10 digits instead of seven to reach wireless customers.

But states including California, Massachusetts and Ohio had been been asking for ways to prevent existing area codes from running out of phone numbers, the agency said. The FCC says that it will now hear proposals from states on how they intend to conserve area codes on a case-by-case basis, including plans to use technology-specific area codes.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ, in West Orange New Jersey.

--

The FCC, which is responsible for overseeing the supply of phone numbers, says that without action the number pool will run out in less than ten years. (FCC)

**

HAM RADIO BUSINESS: A NEW HOME FOR VERTEX STANDARD/YAESU

Vertex Standard USA, better known in ham radio circles as Yaesu, is moving to a huge, beautiful new facility. The new address is Vertex Standard U-S-A, 10900 Walker Street, Cypress, California, 90630. The new main phone number is area code 714-827-7600. All e-mail addresses will remain the same but telephone extensions will change. Vertex Standard makes the move -- no joke -- on Monday, April 1st. (Vertex-Standard)

**

INTERNATIONAL-CANADA: VE7BFK IS NEW RAC ARDF COORDINATOR

Radio Amateurs of Canada has named Gordon Young, VE7BFK as it's news R-A-C National Amateur Radio Direction Finding Coordinator. Young replaces Perry Creighton, VA7PC who held that appointment for the past several years. (RAC)

**

CONTESTS: SOUTH WEST OKLAHOMA SPRINTS

The first ever South West Oklahoma Spring Sprints sponsored by the Lawton VHF Contesting Club will take place in just a few weeks. Sprints are short period contests held primarily on a specific band or using a specific mode. The South West Oklahoma Spring Sprints are band exclusive. The 2 meter sprint is on April 1st from 7 pm to 11 p.m. Central U-S time. The 70 centimeter sprint is April 13th also from 7 to 11 Central. Both are open to all Oklahoma hams living south of Interstate highway 40 and West of Interstate 35. For more

information e-mail ne0p@arrl.net (VHF Reflector)

**

DX

In DX, K8PT and K3PLV are in the Channel Islands and operating as MJ slash K8PT and MJ slash K3PLV from Jersey through the 19th of March. The emphasis is on CW and RTTY in the WARC bands during daylight and 30, 40 and 80 meters during the evenings. Q-S-L as directed on the air. (RSGB)

Also word that Laurence Howell, GM4DMA, who is now resident in Anchorage, Alaska, will be travelling to warmer climates. This, as part of his work for the youth development charity Raleigh International. Howell say that he plans to be active as V51 slash G4DMA from Namibia from the 16th of March for two weeks. Look for him on 160 through 6 meters as his work schedule allows. (RSGB)

**
THAT FINAL ITEM: A WEDDING AT HAMVENTION 2002

And finally this week, get ready for a first. The first ever wedding to be held at the Dayton Hamvention.

No, we are not kidding. For the first time in Hamvention history, wedding vows will be exchanged at the show. This as Cyndi Krieger and Mark Elliot, N8WZW, will be married Saturday, May 18th at the HARA Arena during Hamvention 2002.

Mark and Cyndi met about thirteen years ago through a mutual friend. On their first date Mark and Cyndi went out for dinner and a movie. According to Hamvention sources, they have been an "item" ever since.

Mark introduced Cyndi to amateur radio by going to a hamfest. Cyndi had no idea what a hamfest was, but it sounded interesting. It was and she was hooked! Cyndi is now studying for her license and may test for it before Hamvention weekend.

Why get married at Hamvention? Mark and Cyndi couldn't think of a better place to share their love for each other and for amateur radio than by getting married at the world's largest amateur radio trade show. The ceremony takes place at 3 PM in Forum Room 3 immediately following the Amateur Radio Newsline produced Ham Radio Town Meeting. (Hamvention (r))

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the Dayton Hamvention, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,

Arcadia, California 91066.

Before we go, a reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year is now open. No significant changes from last year. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, KC5MFA saying 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

Source record: 45815

Be sure to check the specs on both radios from QST reviews. The Icom is not necessarily better in ALL ways. There are differences in such things as receiver specs and the DSP. I use both and each has its own distinct advantages. You'll find that some of the loudest detractors of either radio probably haven't even used it, so take all reviews with a grain of salt.

I don't think you would be disappointed with either rig. Good luck.

Try going to http://qrp.lehigh.edu/lists/qrp-l/, subscribe to the reflector for just a few days, then ask that question.

Or like Ken said, go to Dayton, then ask that question.

The numbers are down, no doubt. But dying out is a little strong. I would say there certainly seems to be more interest in homebrewing than 10 years ago. Could be just that the Internet brings more homebrewers/kit builders together. Certainly it makes parts easier to get and gives kit suppliers easier access to their market.

BTW, as nice as an SB-102 is, newer kits can run circles around it at a fraction of the price. Nowadays, when you buy a Heathkit you are buying an antique, and paying antique collector prices for it. If you could find a NIB 102, I'll bet it will fetch a couple of grand. Seems like a few months back an unbuilt HW-7 fetched about $800 ... this is a radio worth less than $50 built.

If you really want to melt solder, take a peek at the stuff from Elecraft, NorCal, Small Wonder Labs, OHR, Red Hot Radio, etc. etc. etc. Then look at Homebrew stuff from K8IQY, NJQRP, Harry's Homebrew Homepage, EI9GQ, etc. etc. In fact, if you go to QRP ARCI's links page, they must have a list of 50 kit suppliers. You won't get the nice feeling of building an old Heathkit (if you can stand to put it together after seeing the price), but you will get a nicer rig for a bunch less money.

>If you mod out the vx5r you can tx on 220.. about the same output why buy
>this thing I am sure it will be over priced.

From what I understand, any mod done to the VX-5 to TX on 220 is unstable and
may cause more problems than it's worth. You also void the warrentee if you mod
the radio in any way.

> I was NASA certified in soldering in 1990 and it would be cool to build one
> and get on the wir with it. I'm KW0WW BTW.

Being a certified solderer was never a prerequisite for putting together a Heathkit. The 1 or 2 pages on "How To Solder", in all of the Heath manuals, was usually enough for anyone to put one together and get them running. Although my first kit, at the tender age of 10, was a Knight Kit Star Roamer I have built, used, and still use many Heathkits. They made good units and are easy to fix, but that may be because I grew up with them and have had 40 years to understand them. I have a SB-101 on my workbench right now with a keying delay problem. I know what the problem is, I'm just waiting on the replacement tube.

IMHO, buying a unbuilt Heathkit for the purposes of building it would be a huge waste of money. You would pay several thousand dollars for a unbuilt SB-102 and, the second you put a soldering iron to the first wire the worth would drop to less than 5% of what you paid. Putting together one of the newer kits, as opposed to a Heathkit, is no less satisfying and you don't run into the huge investment loss.

An advantage of a newer kit is that it is going to be designed with a newer technology. Something that may be easier to understand than taking a trip in the "wayback" machine and learning about tubes. And the newer kit will work as good, if not better, than a Heathkit. The money you save can then be spent on other goodies, like a nice shiny new CW key. :)

My Heathkits include, but are not limited to: Twoer, Sixer, DX-40, SB-10, HO-10, HR-1680, HX-1681, HM-102, HM-2102, ...
I love then all and still use them all, but I would like a kit made by someone else just as much.

>up to a power supply, the thing went ape.......

That could have something to do with the fact that you are not supposed to
transmit with the radio while it's plugged into the provided charger.. :)
That's just the way the VX-5 is designed.

This radio has 777 channels, a frequency counter, four bands,
and uses most of the VX-5R accessories.

Yaesu VX-7R Quad-Band Transceiver

Specifications

Vintage 2002
FCC Cert'd March 7
Type Handheld HT, 6m/2m/220/440
Range 0.500-729 800-999 MHz
Channels ??? main
31 Smart Search
12 Home
10 One-touch
10 Hyper
10 Weather
Banks 10
Search Bands 20
Steps 5/9/10/12.5/15/20/25/50/100 kHz
Modes AM, FM & WFM
Priority 1 channel
Conversion Double (AM/FM)
Triple (WFM)
IFs 1=47.25 MHz (AM/FM), 45.8 MHz (WFM)
2=450 kHz (AM/FM), 10.7 Mhz (WFM)
3=1 MHz (WFM)
Sensitivity As listed in the manual:
0.5 - 30 = 3.0ï¿½V (S/N AM)
30 - 50 = 0.5ï¿½V (SINAD FM)
50 - 54 = 0.16ï¿½V (SINAD FM)
Selectivity As listed in the manual:
AM/FM = -6dB @ 15kHz
-60dB @ 35kHz
WFM = -6dB @ 200kHz
-20dB @ 300kHz
Scan ?? channels/second
Search ?? steps/second
Audio 200mW @ 7.4V
400mW @ 13.8V
Current 150mA single band, Rx
200mA dual band, Rx
55mA single band, quiet

100mA dual band, quiet
25mA single band, saver
50mA dual band, saver
400ï¿½A APO
Power 7.2 - 13.8 V,
Lithium-Ion (FNB-8LI)
2 x AA (FBA-23)
DC
Size 60(W) x 90(H) x 28(D) mm
2.4(W) x 3.5(H) x 1.1(D) in
Weight 250g (8.8oz)
Interfaces SMA, earphone/SP
Antenna SMA, 50 ohm, unbalanced
Accessories Antenna
Quick-draw belt-clip
Manual
Handstrap
NC-72B/C AC charger
1300mAh LithIon battery
Circuit diagram

Optional CSC-88 Soft Case
Optional FBA-23 2xAA battery case
Optional SU-1 Barometric Sensor
Features Dual receiver
DCS/CTCSS decode/search
Power saver (5 levels)
Backlight (keys and LCD)
Rotary
Rx light (4 colors)
Alpha-tags (8 chars)
Auto-store (Smart Search)
Preprogrammed weather
Weather Alert (optional?)
Spectrum Analyzer (ï¿½ 60 chan)
Freq counter (ï¿½ 100 MHz)
Attenuator (20dB)
Auto power-off
Memory mask and skip
Preferential memory scanning
Dual watch (mem/mem or mem/VFO)
Auto backlight on scan stop
Battery voltage indicator
Time of day clock
Time of day on/off timer
Adjustable display contrast
Adjustable backlight dimmer
Internal temp readout
Radio-to-radio cloning
Set Mode (73 settings)

I have a buddy who has a TS-940S and hasn't been able to use it for about 3 years. He claims to have the user's manual, but it's buried under years of debris in his shack. I'm wondering if someone out there might be able to give me some advice.

The first symptom was the power wouldn't come on when the Power switch was pushed. I tinkered around and found that by clicking the Timer switch right next to it, the power switch then worked. What is the purpose of the Timer switch, and is this normal behavior?

The second symptom is that, once power is on, it doesn't receive or transmit. There's a roar of white noise from the receiver, but nothing from the ether. I checked the band with an HW-16 sitting next to it (yeah, it's a real museum), hear signals, tune the TS-940 to the same frequency, but hear nothing. By the same token, there's not a peep of power when I try to tune it for transmit. I'm wondering if it might be something like a blown T/R relay, but without the manual/schematics I can't go beyond a guess. Is this a problem someone out there may have experienced before?

Thanks in advance for any info and 73 to all,

-- Dave, WA0TTN in Seattle

Ok, then can I actually build a full featured all band HF transceiver that
will stand up against the Asian assembled ones they sell retail?

One of Heathkit's original failings was that, for the same money, you
couldn't build a rig with anything near the features of a commercially made
ones.

BTW, it sounds interesting, but I'm not really into QRP. Is anyone making a
full featured all band HF transceiver kit that puts out full power? (like
100-200 watts PEP out?)

I have a 735, and it is an excellent rig, however I haven't had it serviced lately. Hard to say about parts or service -- it's going to vary from rig to rig.
>
>I'd like a rig that's good for shortwave listening, PSK-31, RTTY, CW, and
>voice, preferably in the same price range or lower than a new IC-718.

I'd say a 718 would be a very good choice at $599 or so, and it will probably run rings around a 735, 440 or similar rig.

One thing you might do is go to the Ten Tec web site, and click on "used/demo." The Ten Tec factory accepts Ten Tec gear as trade-ins on new equipment, and they electrically refurbish this older gear at their factory. Probably be better than buying from an individual.

Have fun...

Source record: 45833

I just got this Yaesu 101 with the YC-601 frequency counter. The thing lights up and receives real well but the guy I got it from says the tubes need to be replaced so I haven't transmitted on it.
I pulled the tubes out and the two final tubes (Labelled 6JS6A Toshiba) have what looks like some glass rattling around inside them. The driver tube (Labelled 12BY7A) seems fine.
Question is where can I get these tubes?
After replacing them what will be the output wattage of this unit?
Thanks in advance....
L8ter,
JP

3880. Schematic needed Alinco ALR22T

Newsgroup: rec.radio.amateur.equipment
Date: 2002-03-22 01:20:34 UTC
From: Ray Keefe <barrykooda@YAHOO.COM>
Message-ID: <CFvm8.2081$v42.1118@nwrddc01.gnilink.net>

Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc

Does anyone have a schematic for this 2m FM rig. Alinco was no help, emailed them a year ago and nothing.

All of a sudden this one gets very insensitive on receive. It's intermittant, appears to be maybe a thermal problem, not mechanical. Receiver goes from full scale receive of a local station or repeater signal to no bars and barely above the noise floor. Example a local 3 miles away hits full scale on 3 watts, when the recieve drops out he has to crank it up to 100 watts before I can hear him and then it's only 2 bars.

It's not antenna related, different feed lines, different antennas, SWR bridge in line at all times no change at all in output signal. Problem is somewhere in the front end. Any ideas?

That's usually what a frequency counter does... :)

I have a couple of Cobra 29's I could sell for under $100.....

That's about all the HF you're going to get for that price.

Hi All;
Some more coils & stuff found around the Shack :-)
Lot #1 is 40 Miller adjustable coils, Mostly NOS, brand new.
Price is $40 ppd Conus.
PIC>>
http://www.baltimorepress.com/~wa2rqy/40millercoils.jpg

Lot #2 is 52 assorted, adjustable & fixed coils from experimentor, price is
$24.00ppd.
Pic>>
http://www.baltimorepress.com/~wa2rqy/52coils.jpg

Lot #3 is 3 coil forms, 2(3-pins) look like the ones used on the GD-1
Heathkit Grid Dipper & the big one(5-pins) is an Amphenol cat# 24-5P and is
marked "OSC, 7.0mcs.".
Price is $13.00ppd.

Look under the rear fascia on the left. There should be a re-enforced bar
just before the
"bumper". Usually, this is where a trailer hitch is mounted. You might
find a hole(s) where
a flat bar can be attached with bolts and brought from under the bumper.

Hi All;
I am parting out a Yaesu FT-101E radio.
It is already missing the Mode switch & CW filter, fan & speech Processor(never had one). All else is available & in excellent shape. The original reason is the Mode switch went bad & last owner gave up & became a SK.
Have complete cabinet, all knobs, all xtals, tubes, etc.
watta ya need?
I am not interested in selling the complete unit. I am not selling one knob, the front trim ring or one foot either, complete sections, like knob sets, all tubes, all xtals, all cabinet complete.
Thanks es 73..........RICH-WA2RQY RLUCCH2098@aol.com

Go to a local hamfest. I see older tube units made by Swan, Drake, etc. routinely sell in this price range. They are good durable rigs that put out more watts than the newer rigs of today. With state of the art amateur radio gear falling in price, these rigs are dirt cheap. I recently picked up at a hamfest a Drake TR-4C with power supply for $75. Works great!

It's been about 20+ years, but I think it will do between 140 and 160 watts
out.
I had 6JS6C tubes in mine at the time.

Two plces that have them is B&D Enterprises, www.bdent.com, 1-800-458-6053,
who lists them for $34.15 each. They are reliable to send the right parts
promptly by UPS 2-day. They don't list matched pairs, though.

Another place is www.rfparts.com who may have them in matched pairs. Good
luck.

You can always go to the swap meet and pick one up and RE-build It...
That's how I got mine in '76. Most of the parts are easily replaced
by generics and through original manufacturers. The dial parts and
the drive belts are the biggest problem. I suspect the drive belts could
be found in vacuum cleaner shops or from PRB (tape/vcr/projector
belt jobber).

FS: Nice ICOM AT-500 High-Power Automatic Antenna Tuner. It covers all of the 160 through 10-Meter HF Bands, and will automatically switch to one of four coaxial antenna ports, depending on the band in use. It works excellent, and included is the original manual and AC power cord. It will run on 117VAC or a 12V DC power source (mobile, portable, etc.) %435 plus shipping from Oregon.
